Graphite, second iteration

Warm pencil greys from the supplied palette, developed into a full theme: dark first, with a light companion. Structure, type, and margin rules are unchanged.

Page and desk pulled apart

The supplied page and desk were 1.18:1, close enough to merge on poor screens. Desk drops to #2A2827 and page sits at #3B3937: 1.28:1, with a third level for menus at #494746.

A lavender with colour

The supplied violet #5F5B6B had chroma 0.026 and failed as text (1.6:1 on the page). The accent keeps its hue (297) and lifts to #C3B2F1, chroma 0.09, 6.0:1.

Sand for secondary text

#C1BDB3 from the palette becomes muted (#C3BDAE, 6.1:1), so secondary text is warm, not grey-blue.

Status colours that sit in the greys

Red, ochre, and green at chroma 0.08 to 0.11, light enough to pass and quiet enough not to glow on a dark page.

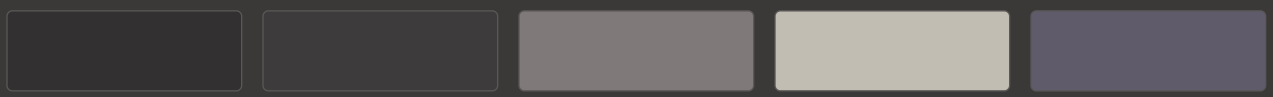

Borders that pass

Control outlines at #888682: 3.2:1 on the page, 4.0:1 on the desk.

A light companion

White pages on a warm grey desk, graphite ink, and a deep lavender accent, for daylight and printing.

Accent study

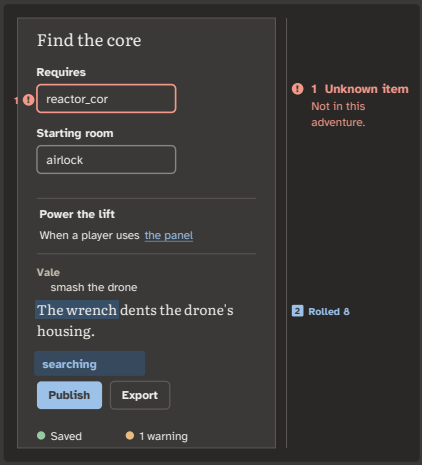

Four accents tried on the same fragment. All pass 4.5:1; the choice is about meaning and distance from the status colours.

Lavender, hue 297

#C3B2F1, 6.0:1

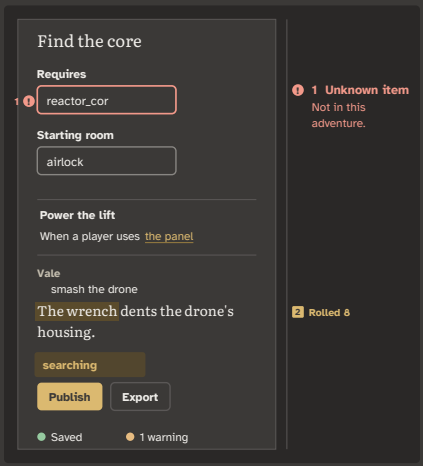

Chosen. From the palette's own violet; far from every status hue; reads as ink, not as a warning.

Chalk blue, hue 250

#9CC2EA, 6.2:1

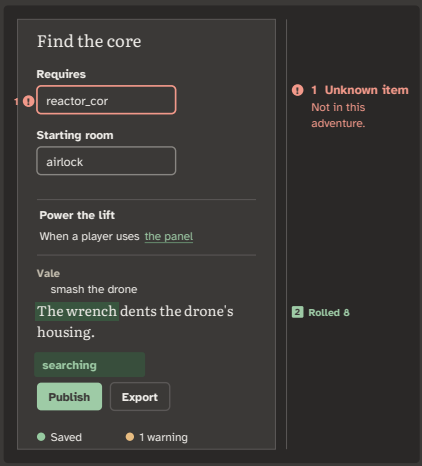

Margin's heritage. Cooler than the greys; a dark-mode Margin rather than a new theme.

Brass, hue 85

#DBB970, 6.1:1

Lamplight. Collides with the sand muted text and the ochre warning; links read as warnings.

Sage, hue 150

#9ECBA6, 6.3:1

Calm, but the same hue as success; every link looks like a confirmation.

Hue distance from the status colours

Lavender, hue 297	nearest: danger at 93 degrees
Chalk blue, hue 250	nearest: success at 100 degrees
Brass, hue 85	nearest: muted at 4 degrees
Sage, hue 150	nearest: success at 0 degrees

Ramps

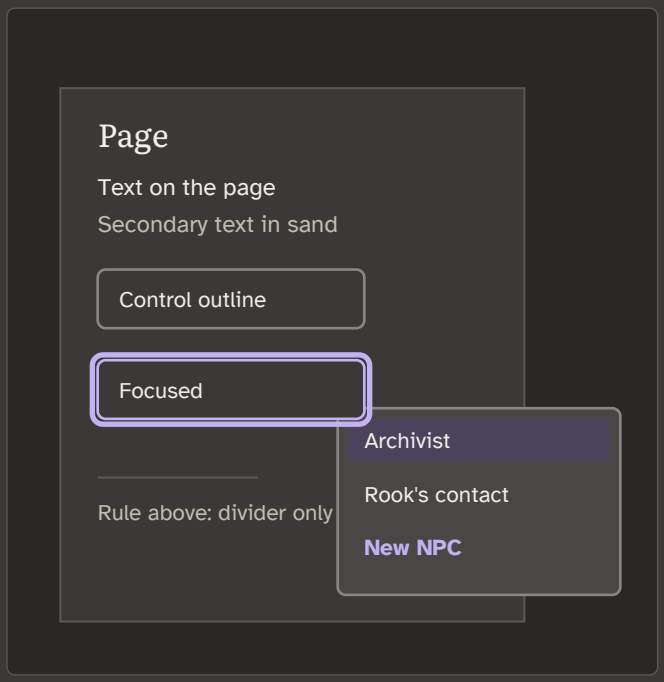

Eleven steps weighted toward the dark end, where Graphite lives. Graphite neutrals keep chroma under 0.01.

Surfaces

Three levels, each a step lighter: desk, page, raised. Depth comes from lightness, never from shadows.

Dark
desk #2A2827 page #3B3937 raised #494746

Light
desk #EEECEA page #FFFFFF raised #FFFFFF

Desk to page	1.28:1 dark, 1.18:1 light. Enough to see the page edge; the page also carries a 1 px rule.
Raised	Menus, dialogs, and popovers. In light mode raised is white like the page, so it relies on its border.
No shadows	Graphite is matte. Overlays are lighter and outlined, which also survives dark-mode screens that crush shadows.

Colour vision

Typical	Protanopia	Deuteranopia	Tritanopia
error	error	error	error
warning	warning	warning	warning
hint	hint	hint	hint
trace	trace	trace	trace

Shapes keep statuses apart where hue does not: under protanopia and deuteranopia the red and ochre move close, as in every red-amber palette.

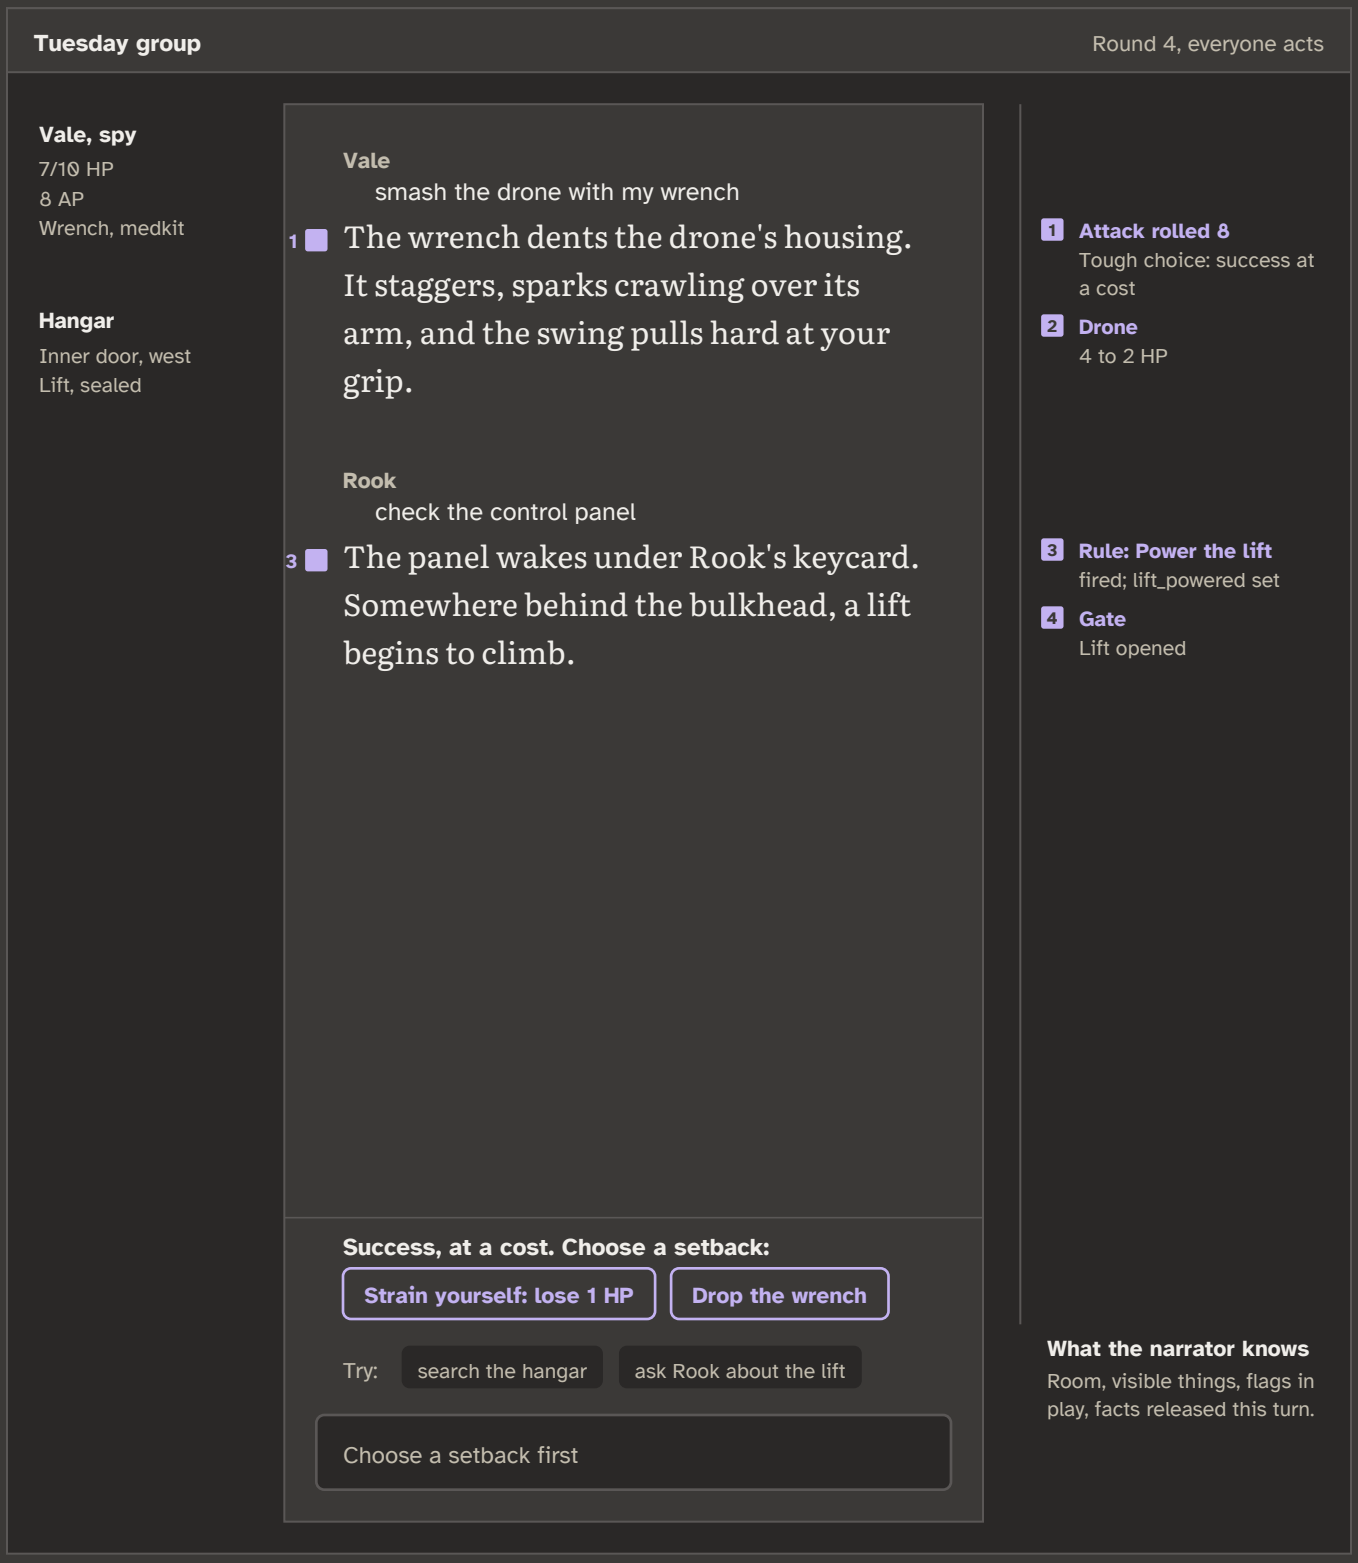

Screen: adventure editor

Plot section. The arc is drawn on the page; its rules follow as inserts. The note index in the header counts and jumps to notes.

Screen: play, playtest view

The same page with the narrator's trace in the margin: which rule fired, which condition failed, and what the narrator was told.

Screen: play, player view

A book page. Narration in Literata; each player's action set in Atkinson, indented under their name. The margin shows turn order and who is typing.

Tuesday group — Round 4, everyone acts

Vale, spy
7/10 HP
8 AP
Wrench, medkit

Hangar
Inner door, west
Lift, sealed

Vale
smash the drone with my wrench

The wrench dents the drone's housing. It staggers, sparks crawling over its arm, and the swing pulls hard at your grip.

Rook
check the control panel

The panel wakes under Rook's keycard. Somewhere behind the bulkhead, a lift begins to climb.

Success, at a cost. Choose a setback:

[Strain yourself: lose 1 HP] [Drop the wrench]

Try: search the hangar · ask Rook about the lift

Choose a setback first

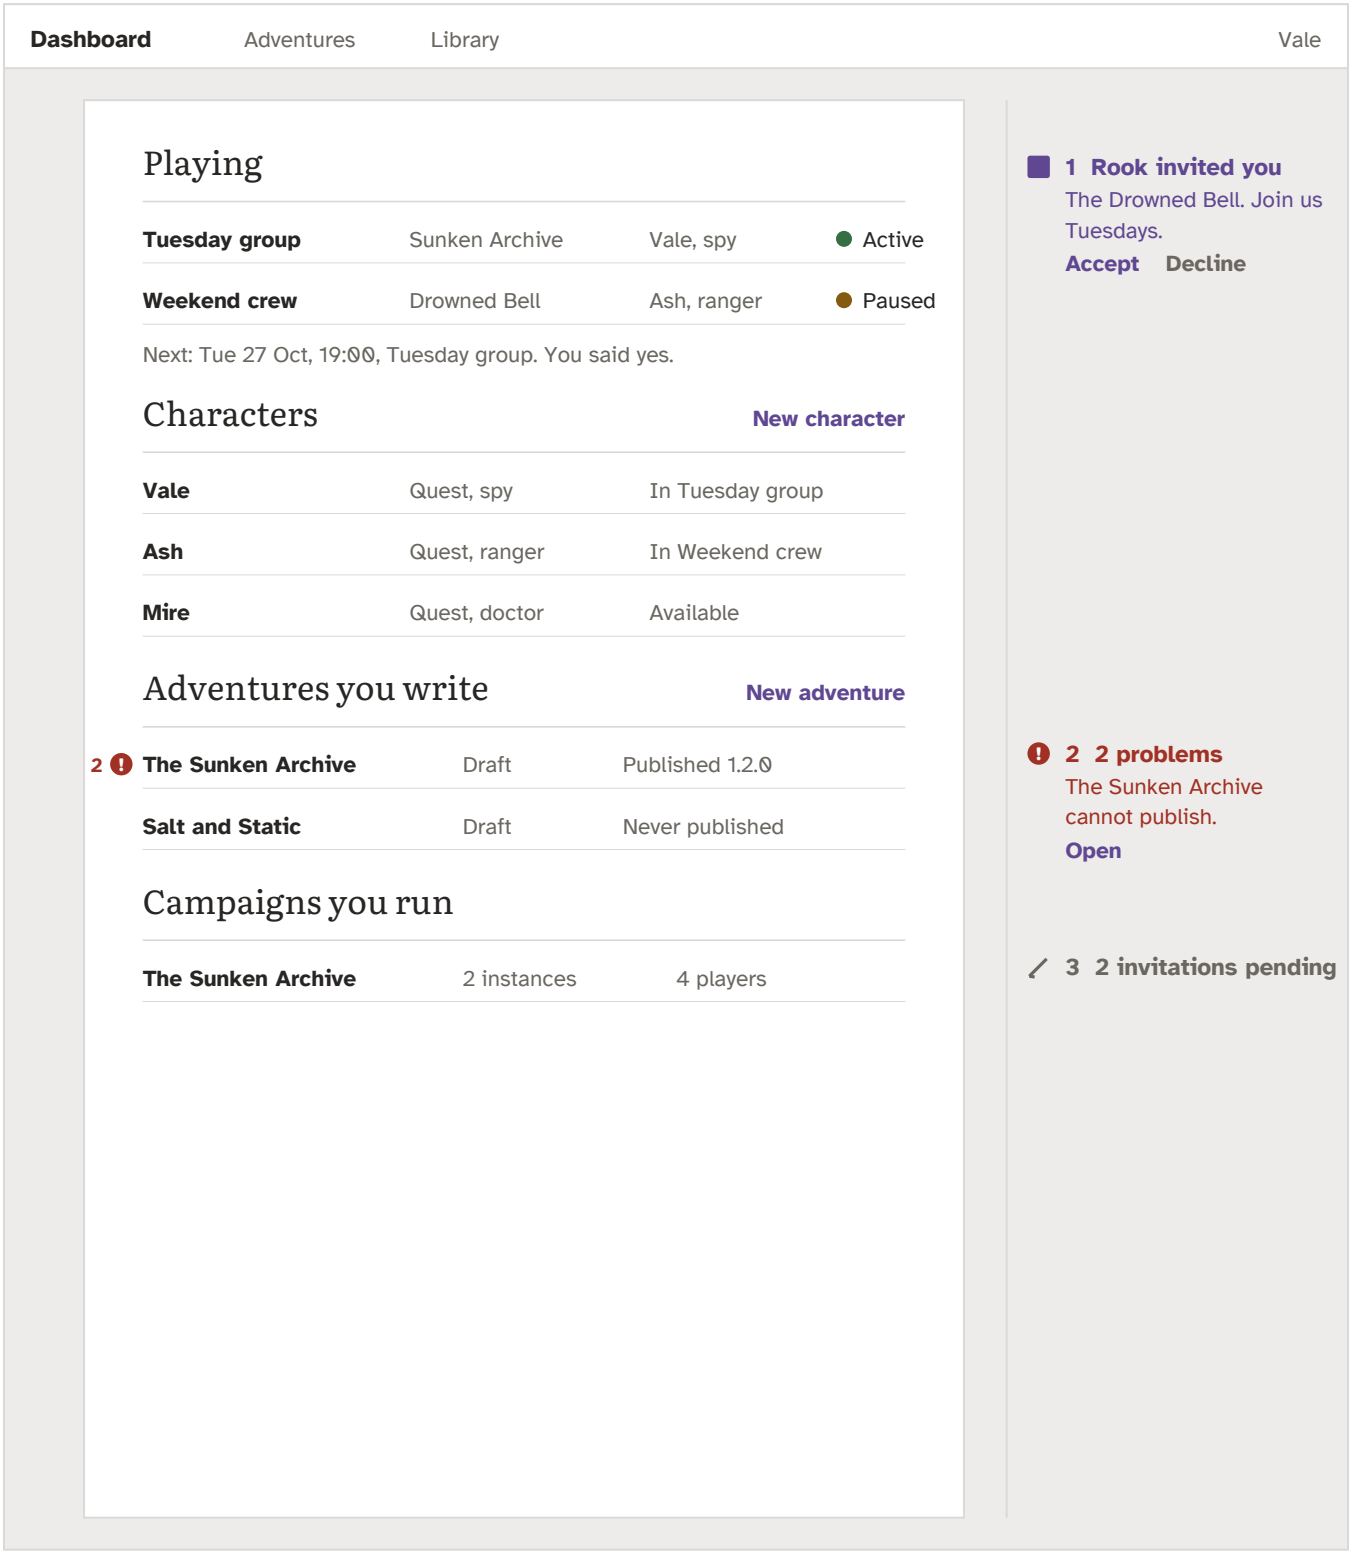

This round

- Vale, choosing a setback
- Rook, declared
- Ash, typing

1:42 left

Screen: dashboard

A contents page. Each line is one game, character, or adventure, with its open notes counted.

Tailwind

Graphite as a theme: data-theme=graphite on the root, with its own light and dark values.

Switching

Settings offers Margin and Graphite, each with System, Light, and Dark. Graphite's System setting follows prefers-color-scheme like Margin's. Component code reads only token names, so either theme drops in.
