Desktop screens are 1280 by 800 px; phone screens are 390 by 844 px. Page numbers follow this list.

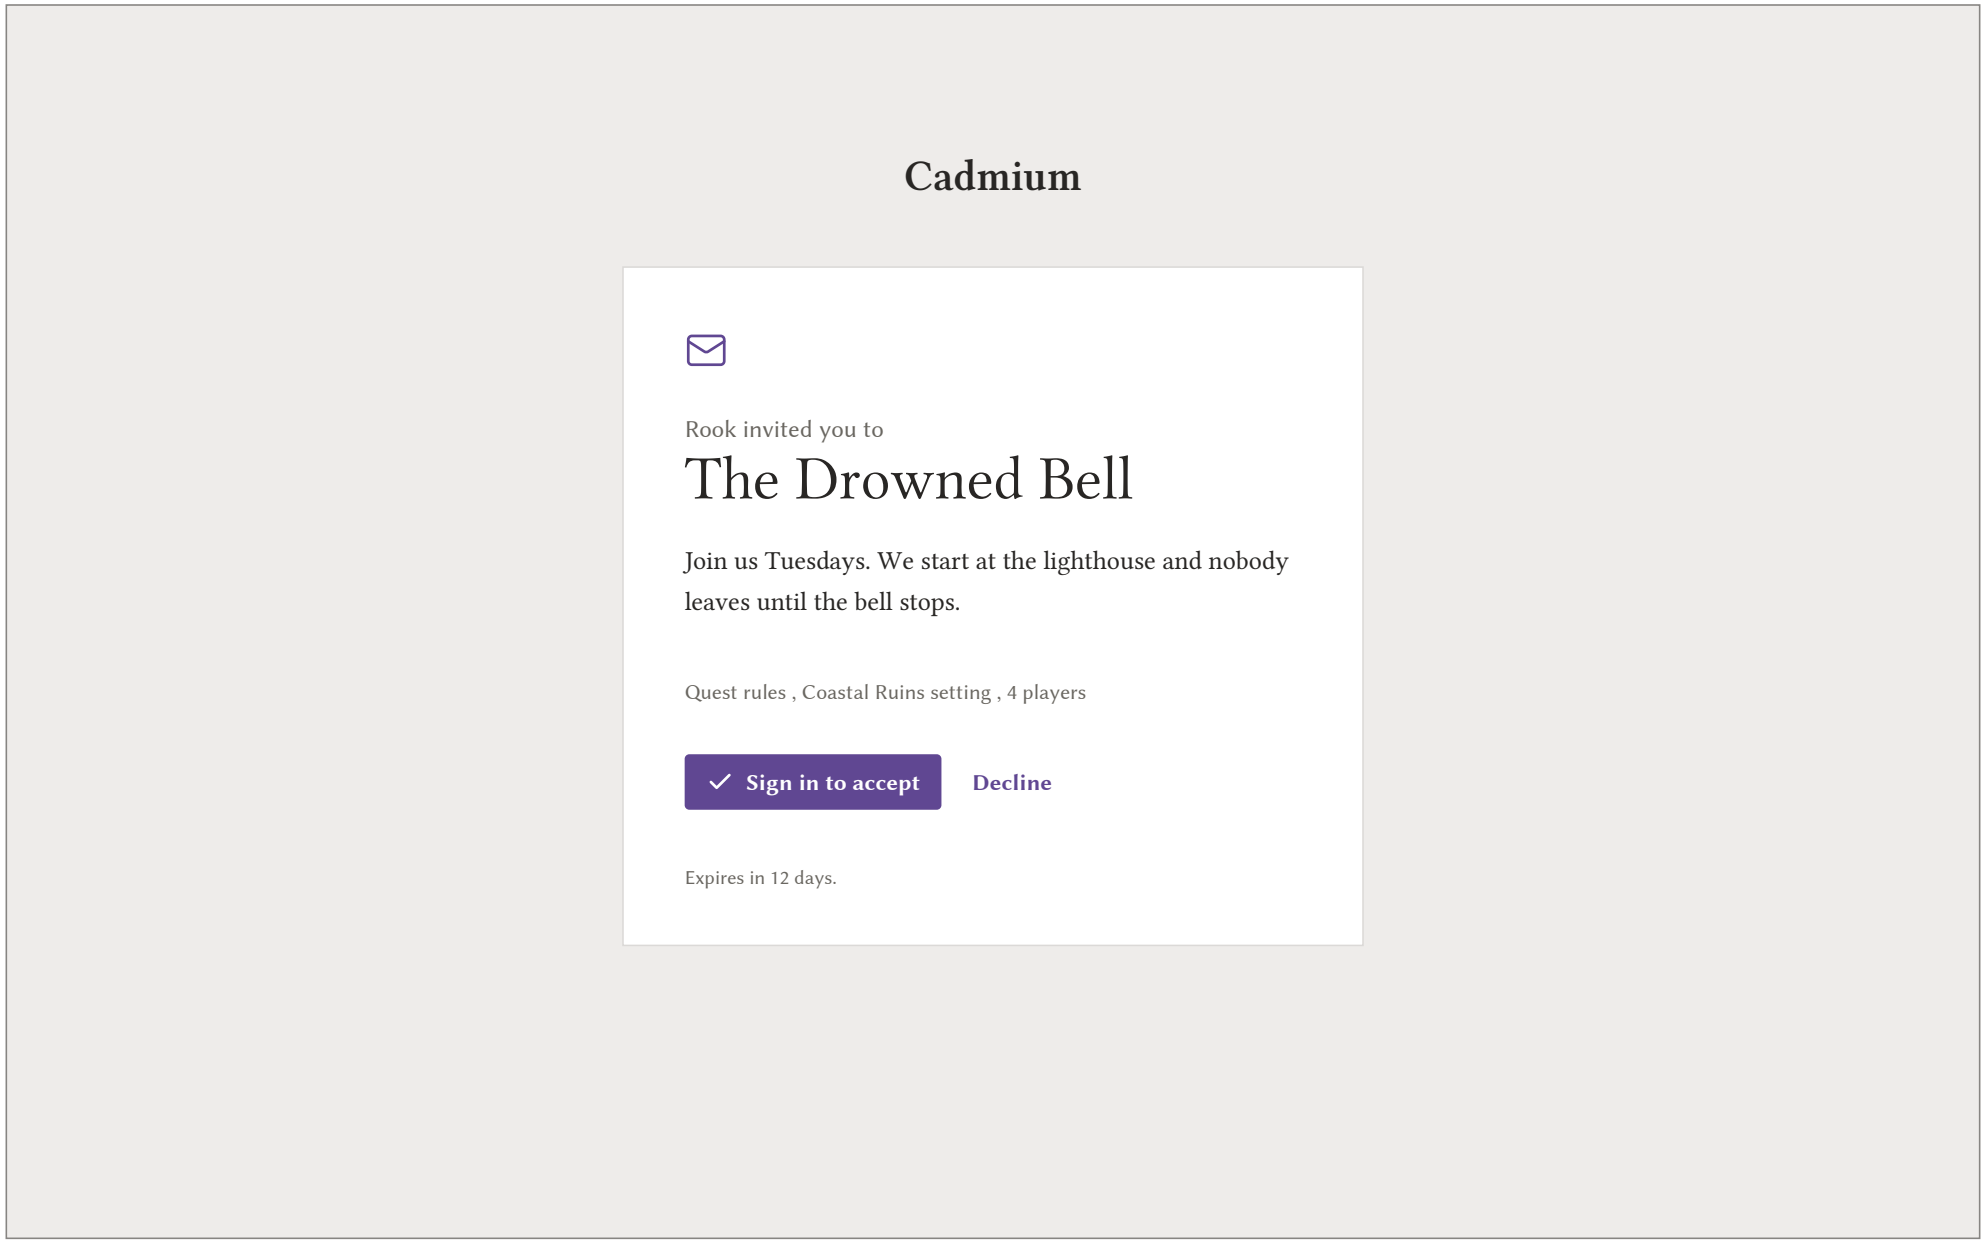

Sign in

Public. Clerk's sign-in component on the desk under the Cadmium wordmark. Sign up is the same layout with Clerk's sign-up component.

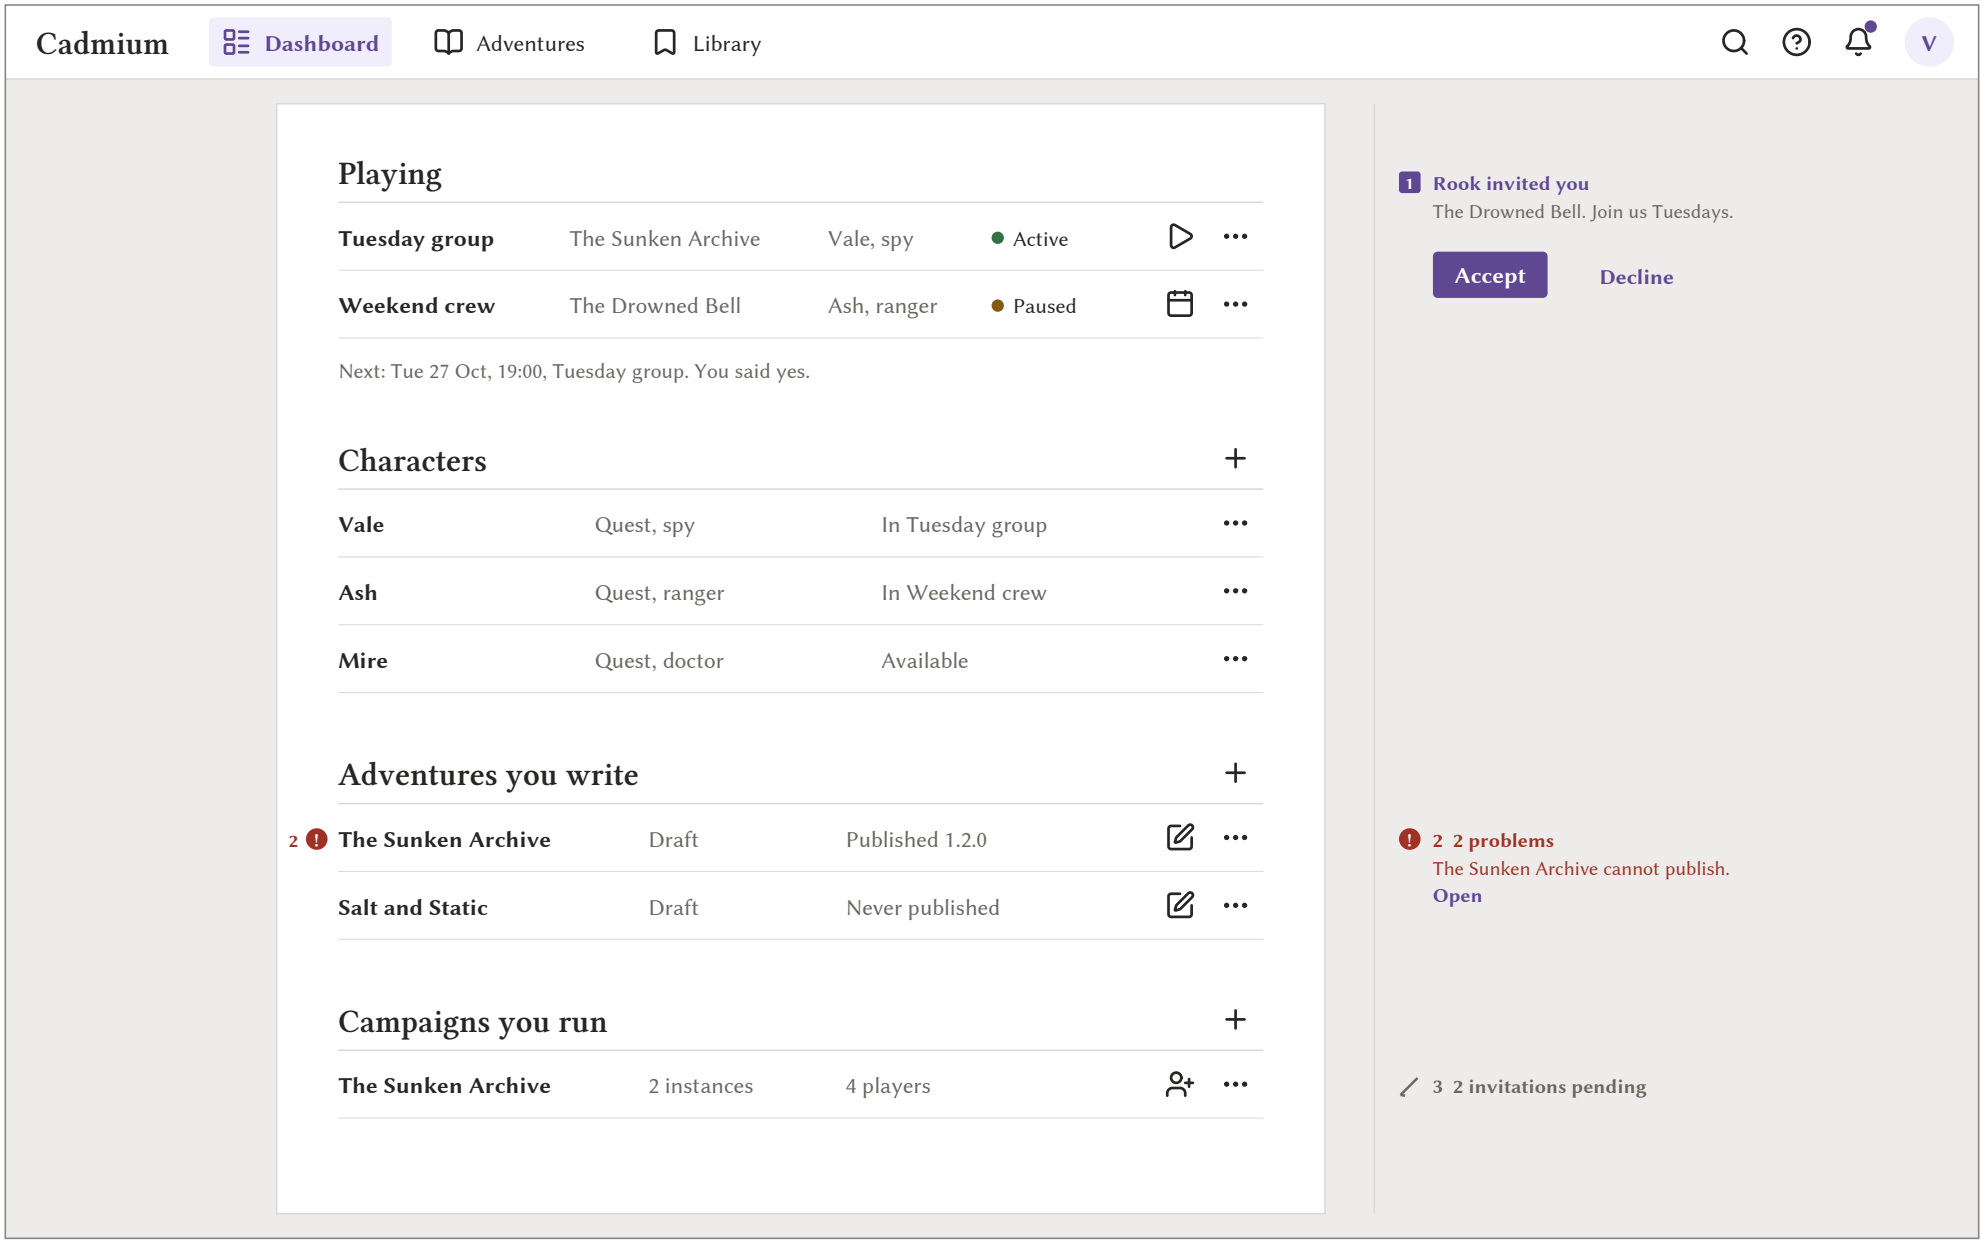

Invitation

Public route /invite/[token]. Signed-out visitors see the invitation, then sign in or up and return here to accept.

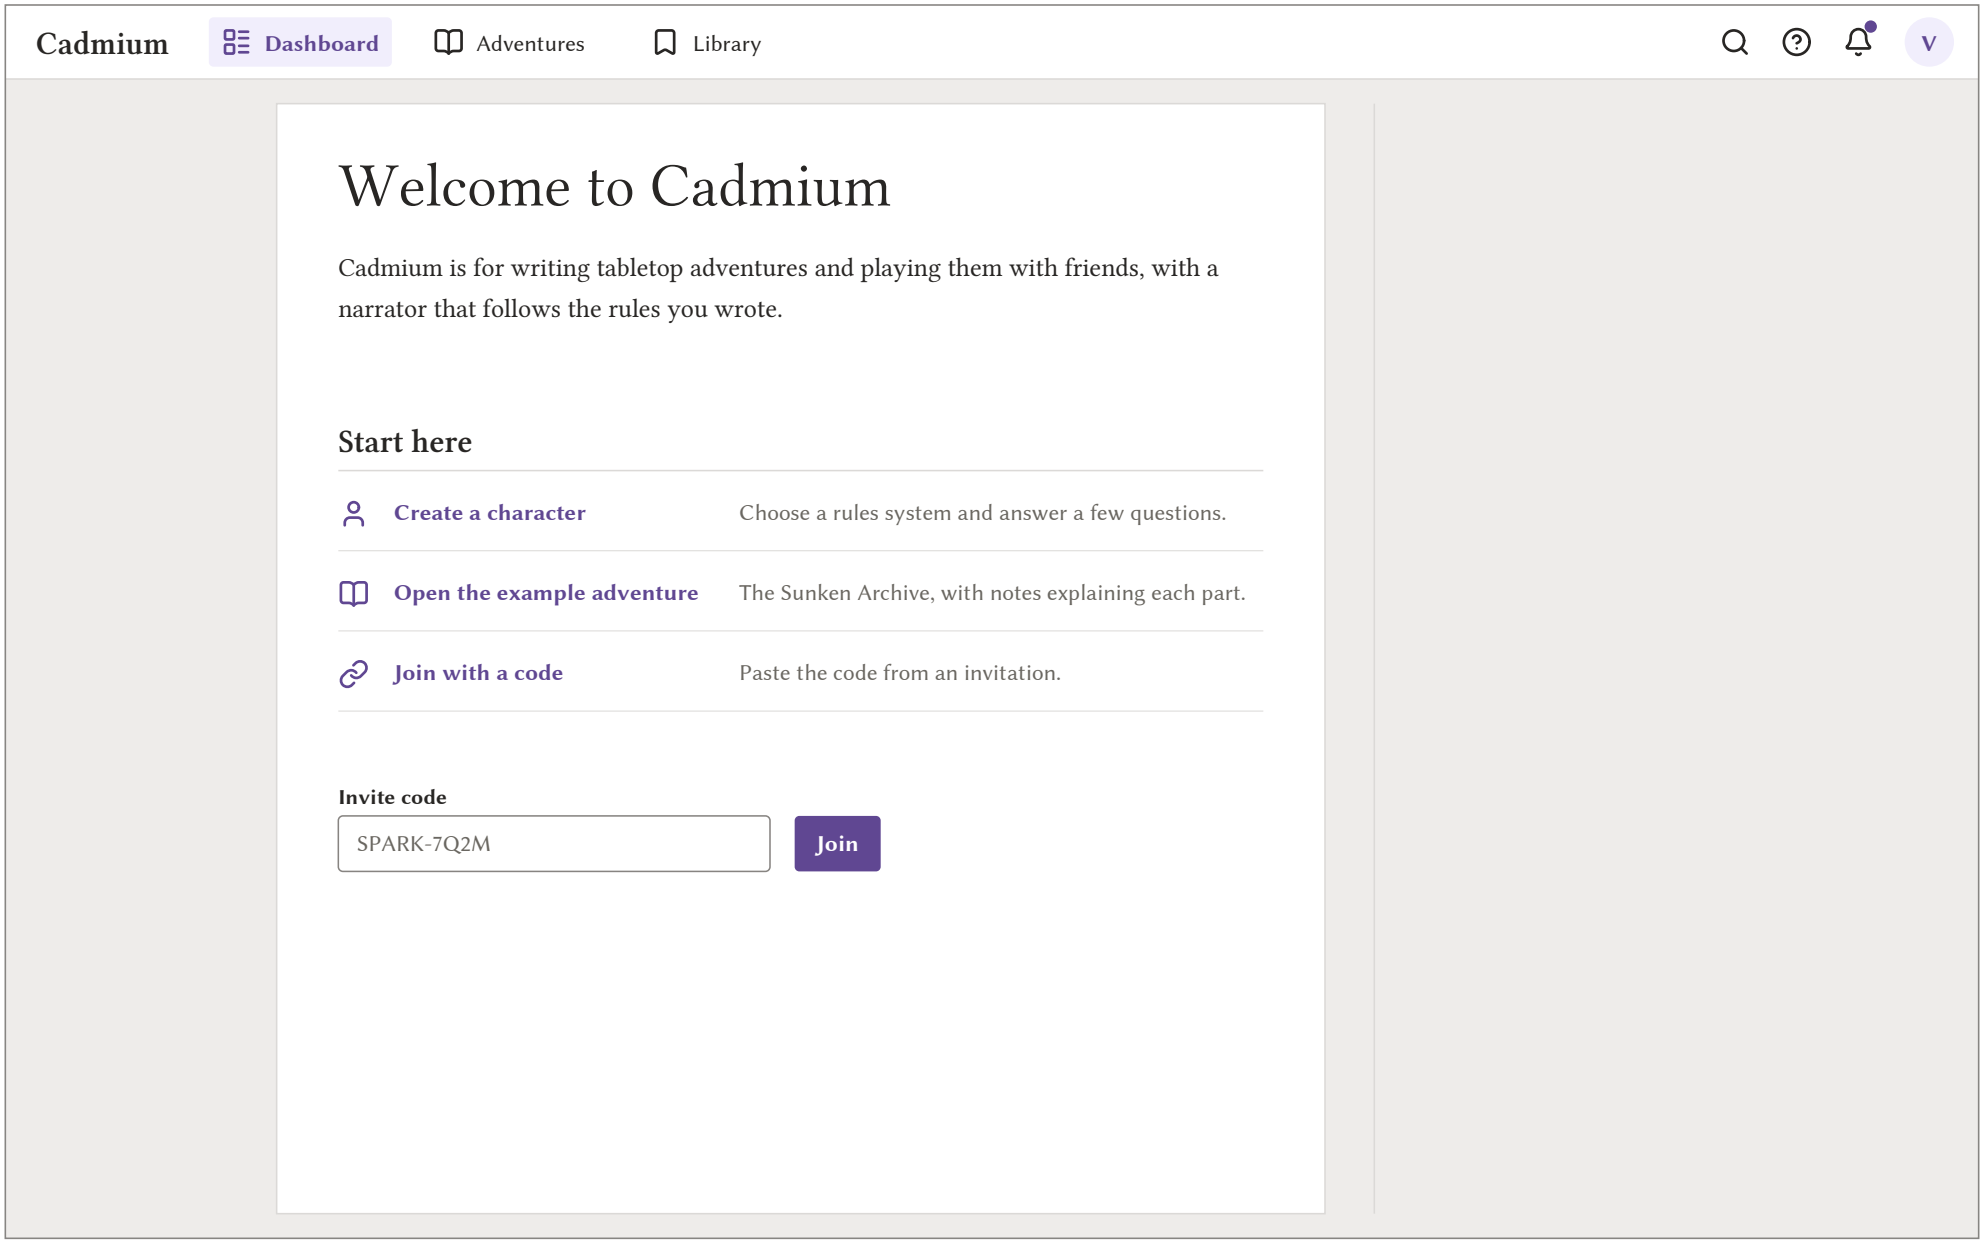

Dashboard

A contents page. Lists, not cards; each row leads somewhere. The margin carries what needs attention.

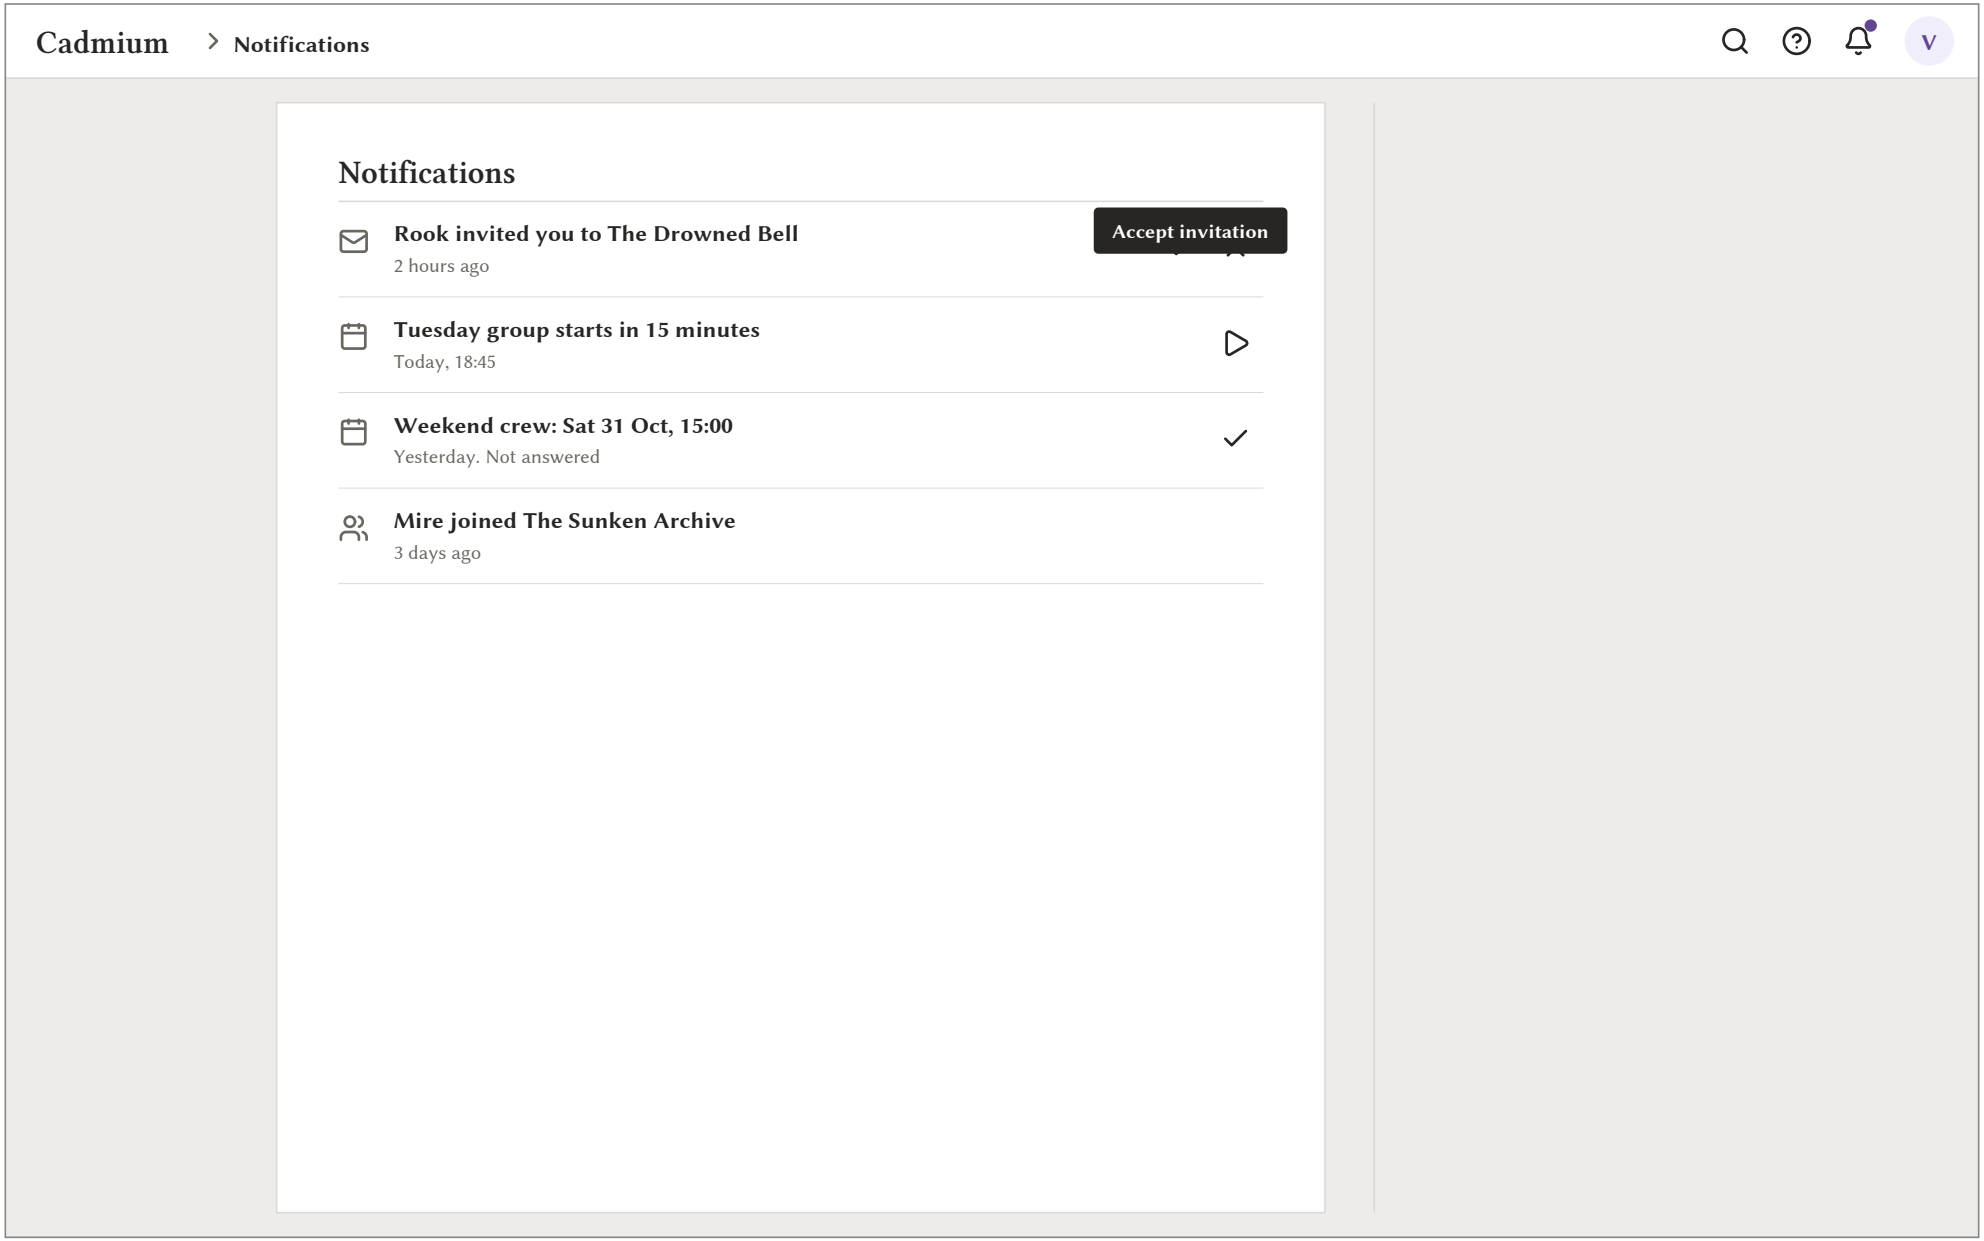

Dashboard, first run

Empty states name the next step. The example adventure is annotated in its own margin.

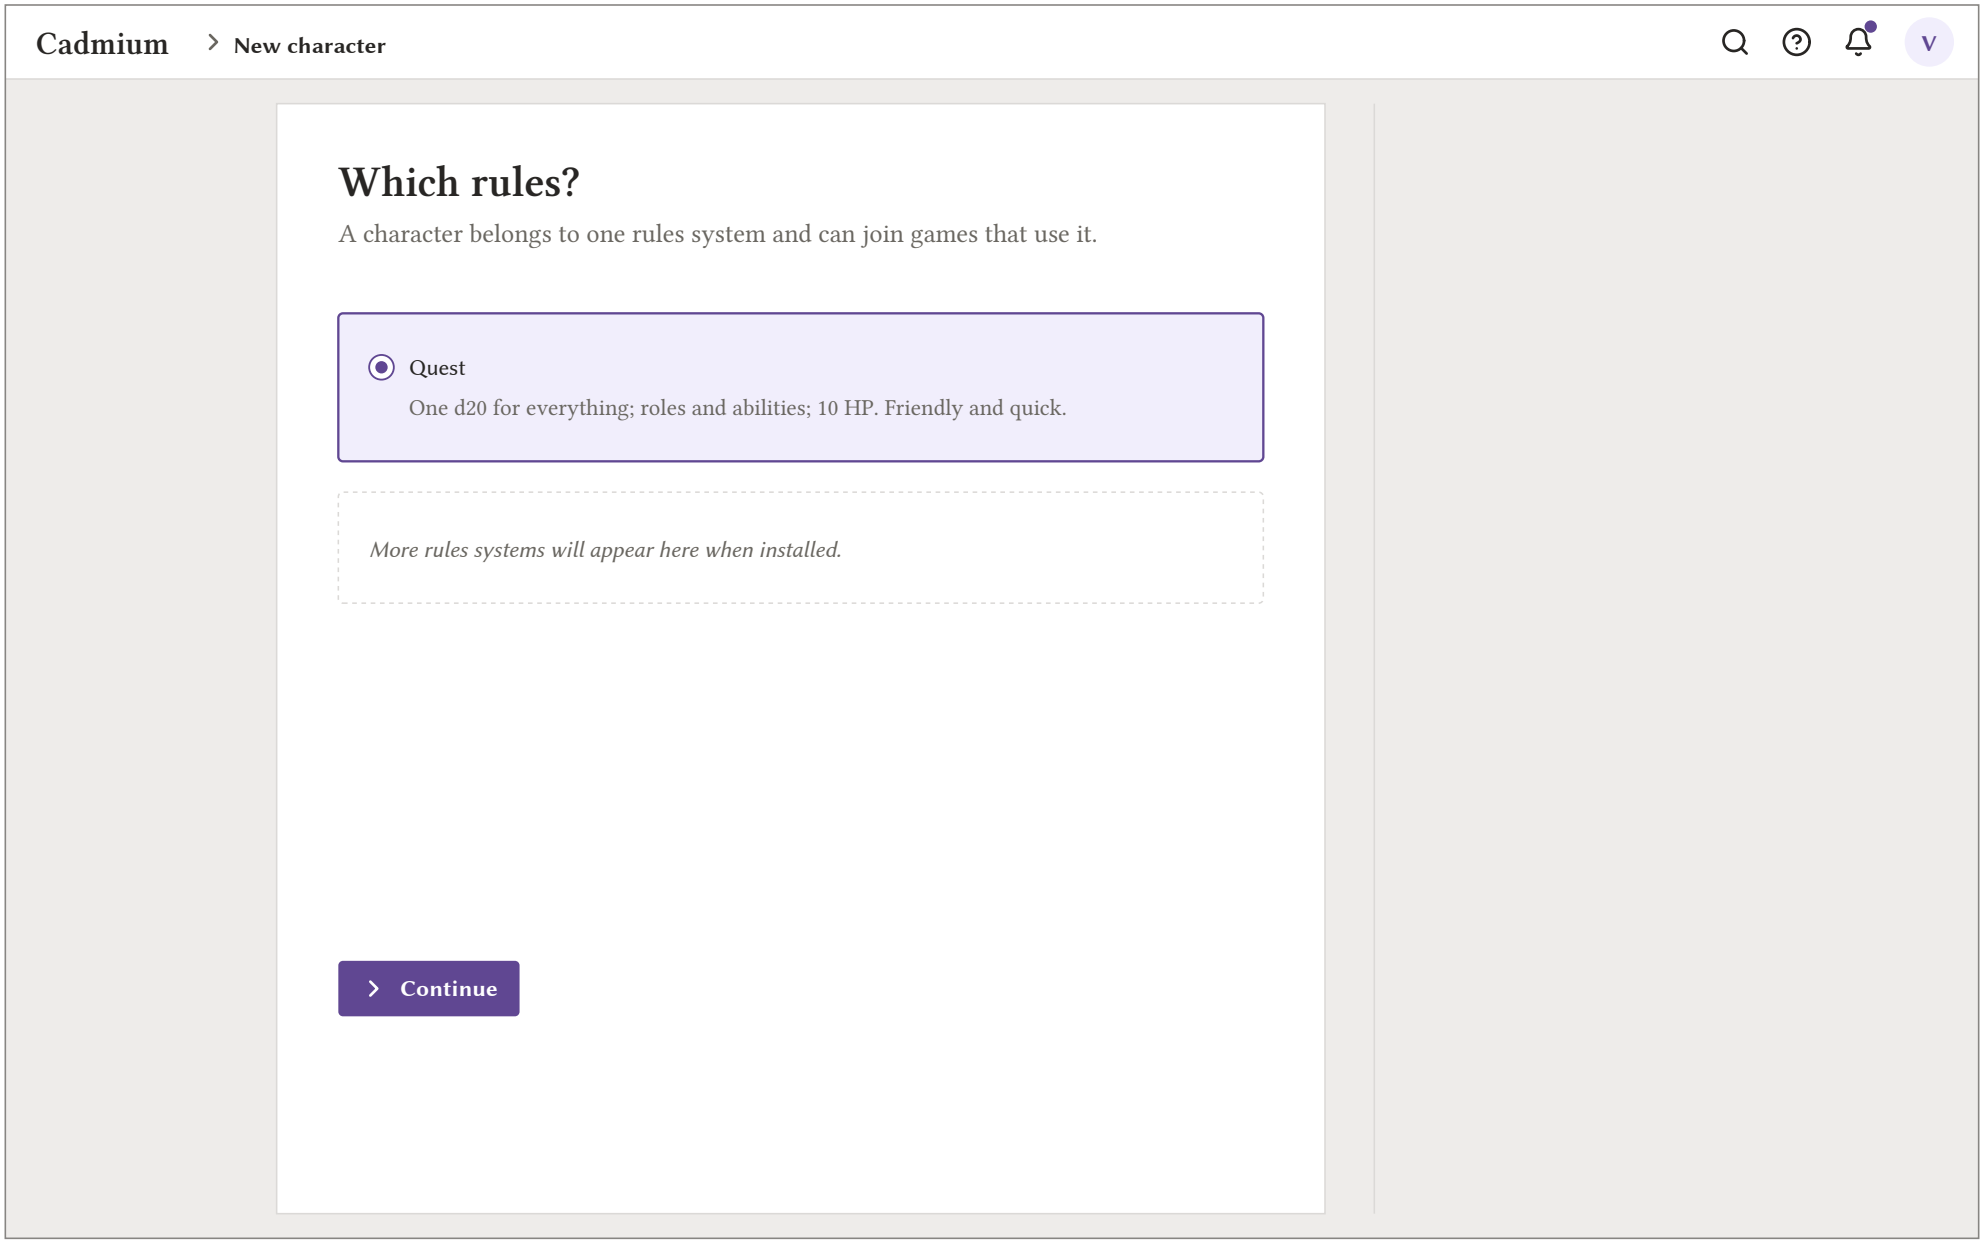

Notifications

Invitations and session reminders. Opened from the bell; also a page at /notifications.

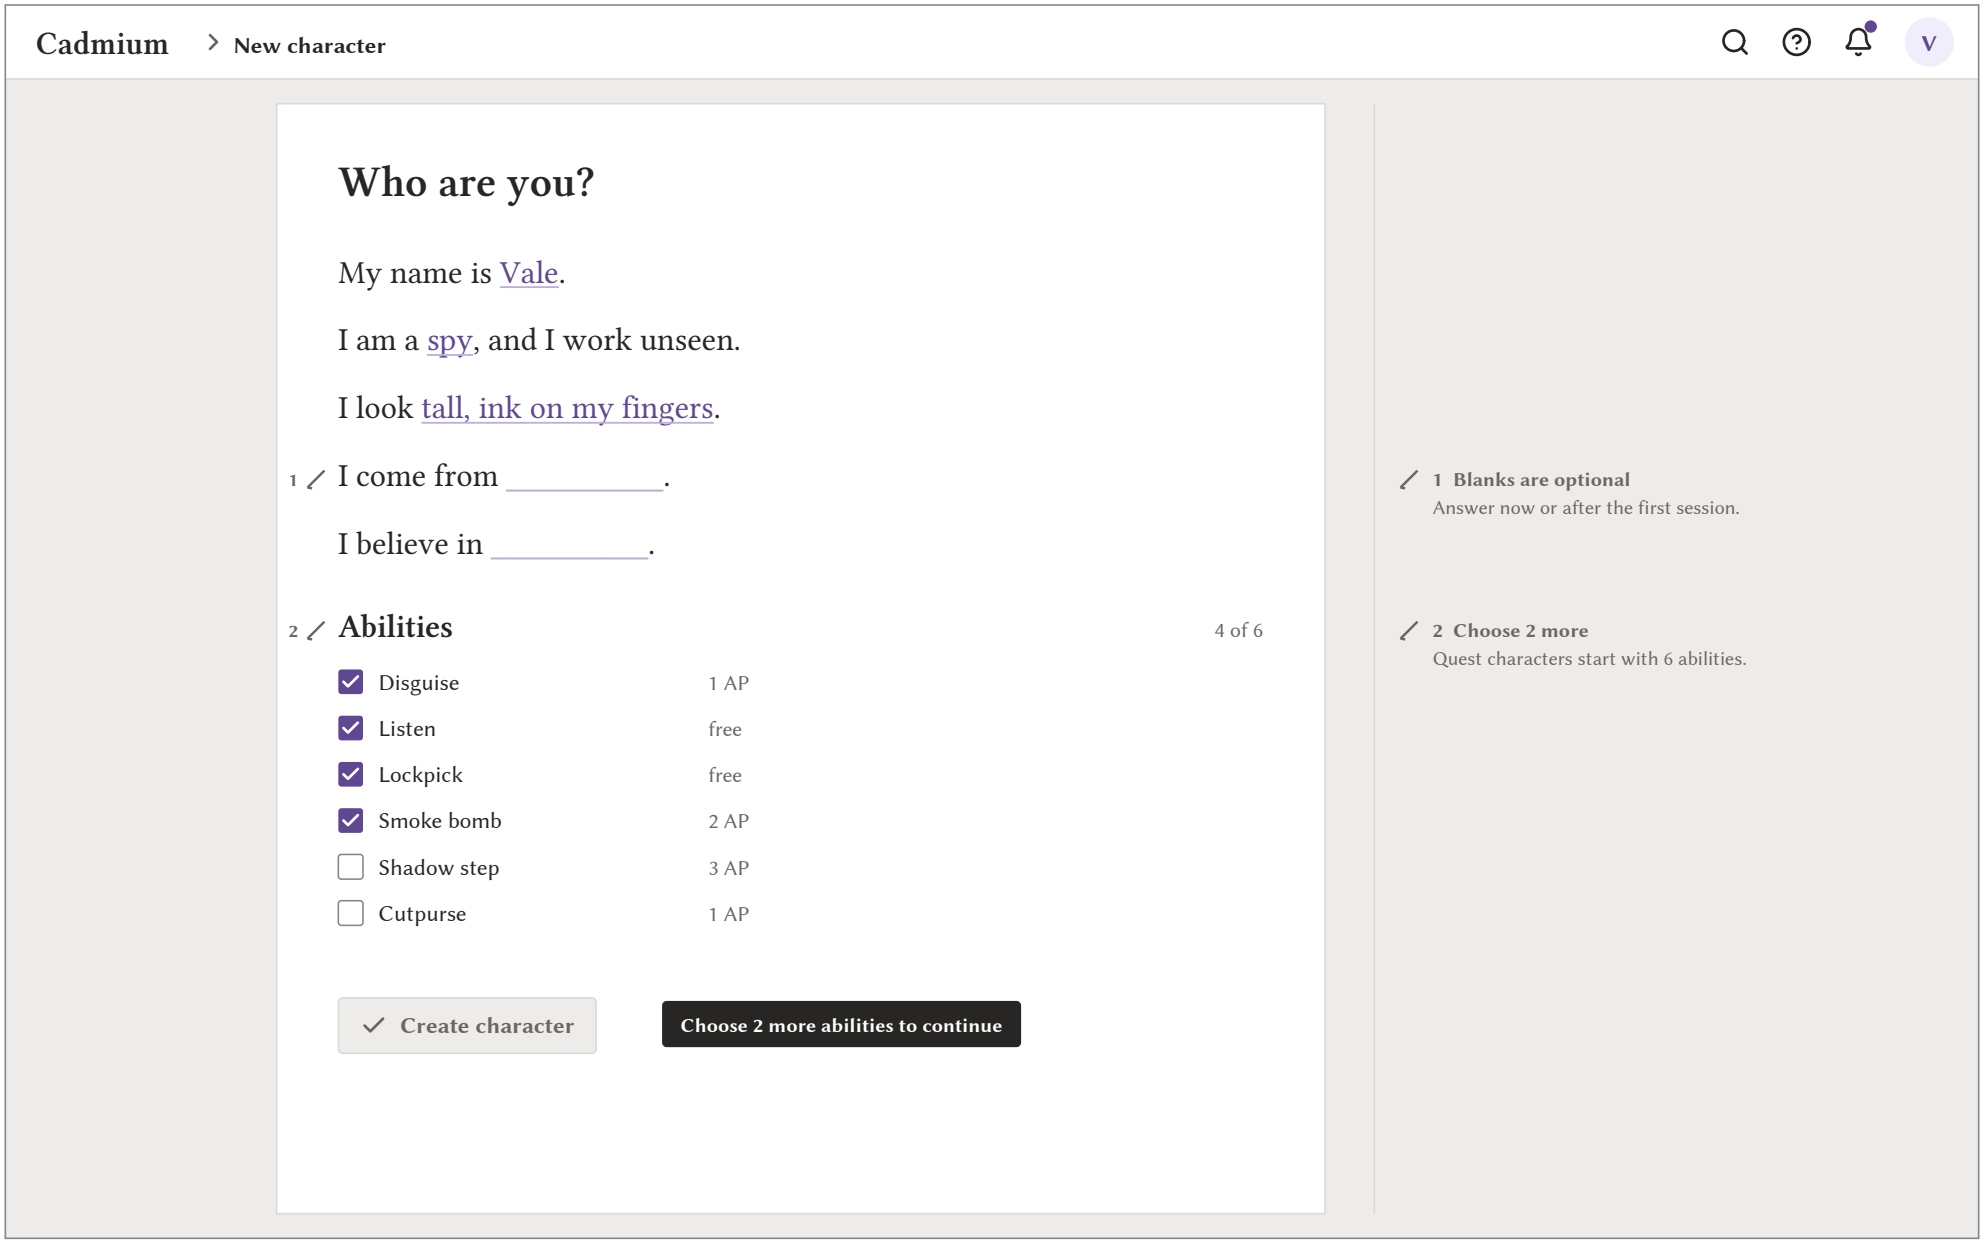

New character: rules system

Step 1 of 2. Each system names its feel in one line. Quest is the only system installed.

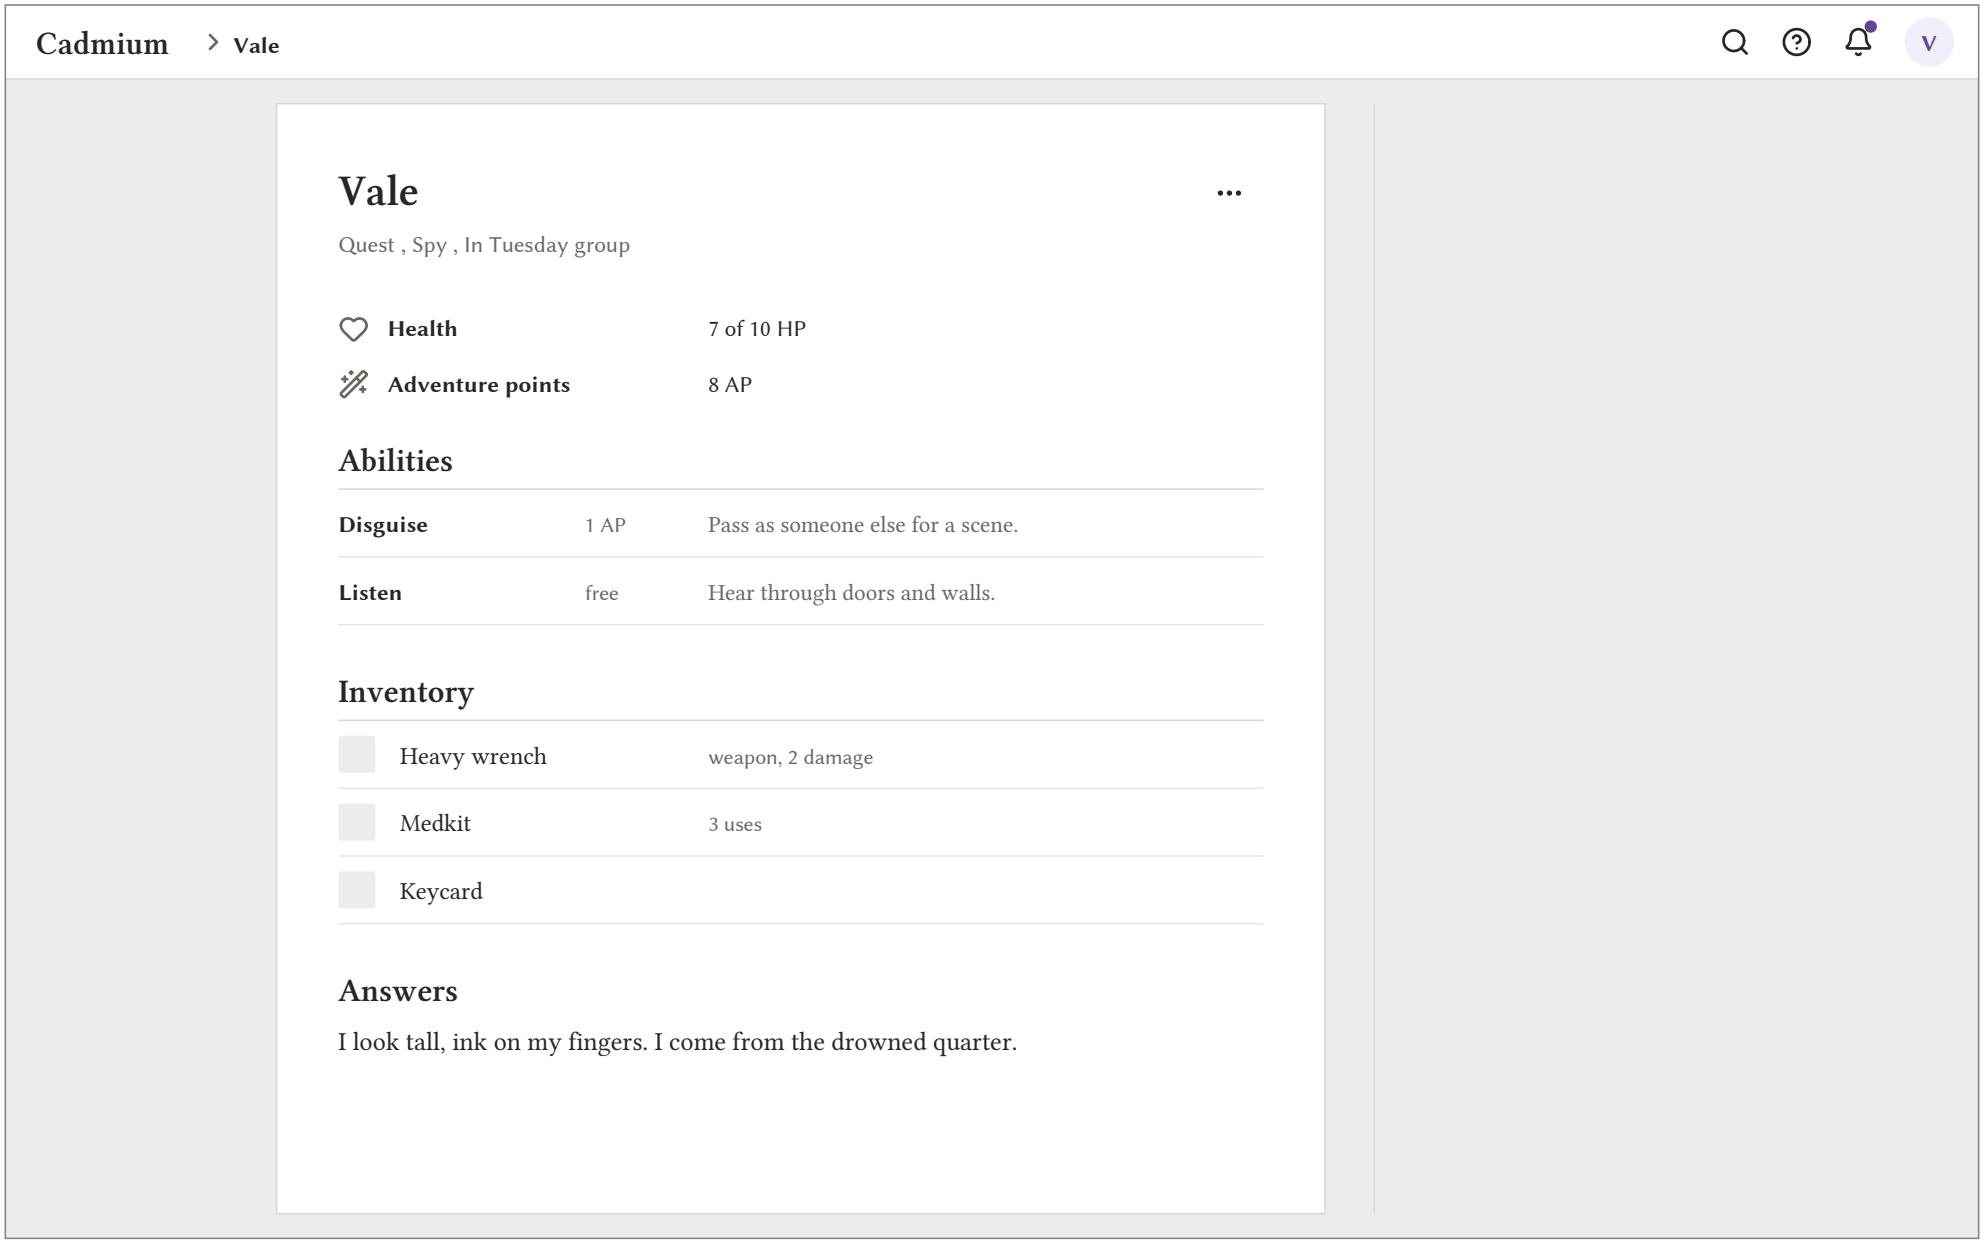

New character: Quest

Step 2 of 2. Quest's questions as sentences with blanks; each blank opens a picker or a short field. Hints in the margin say what is left.

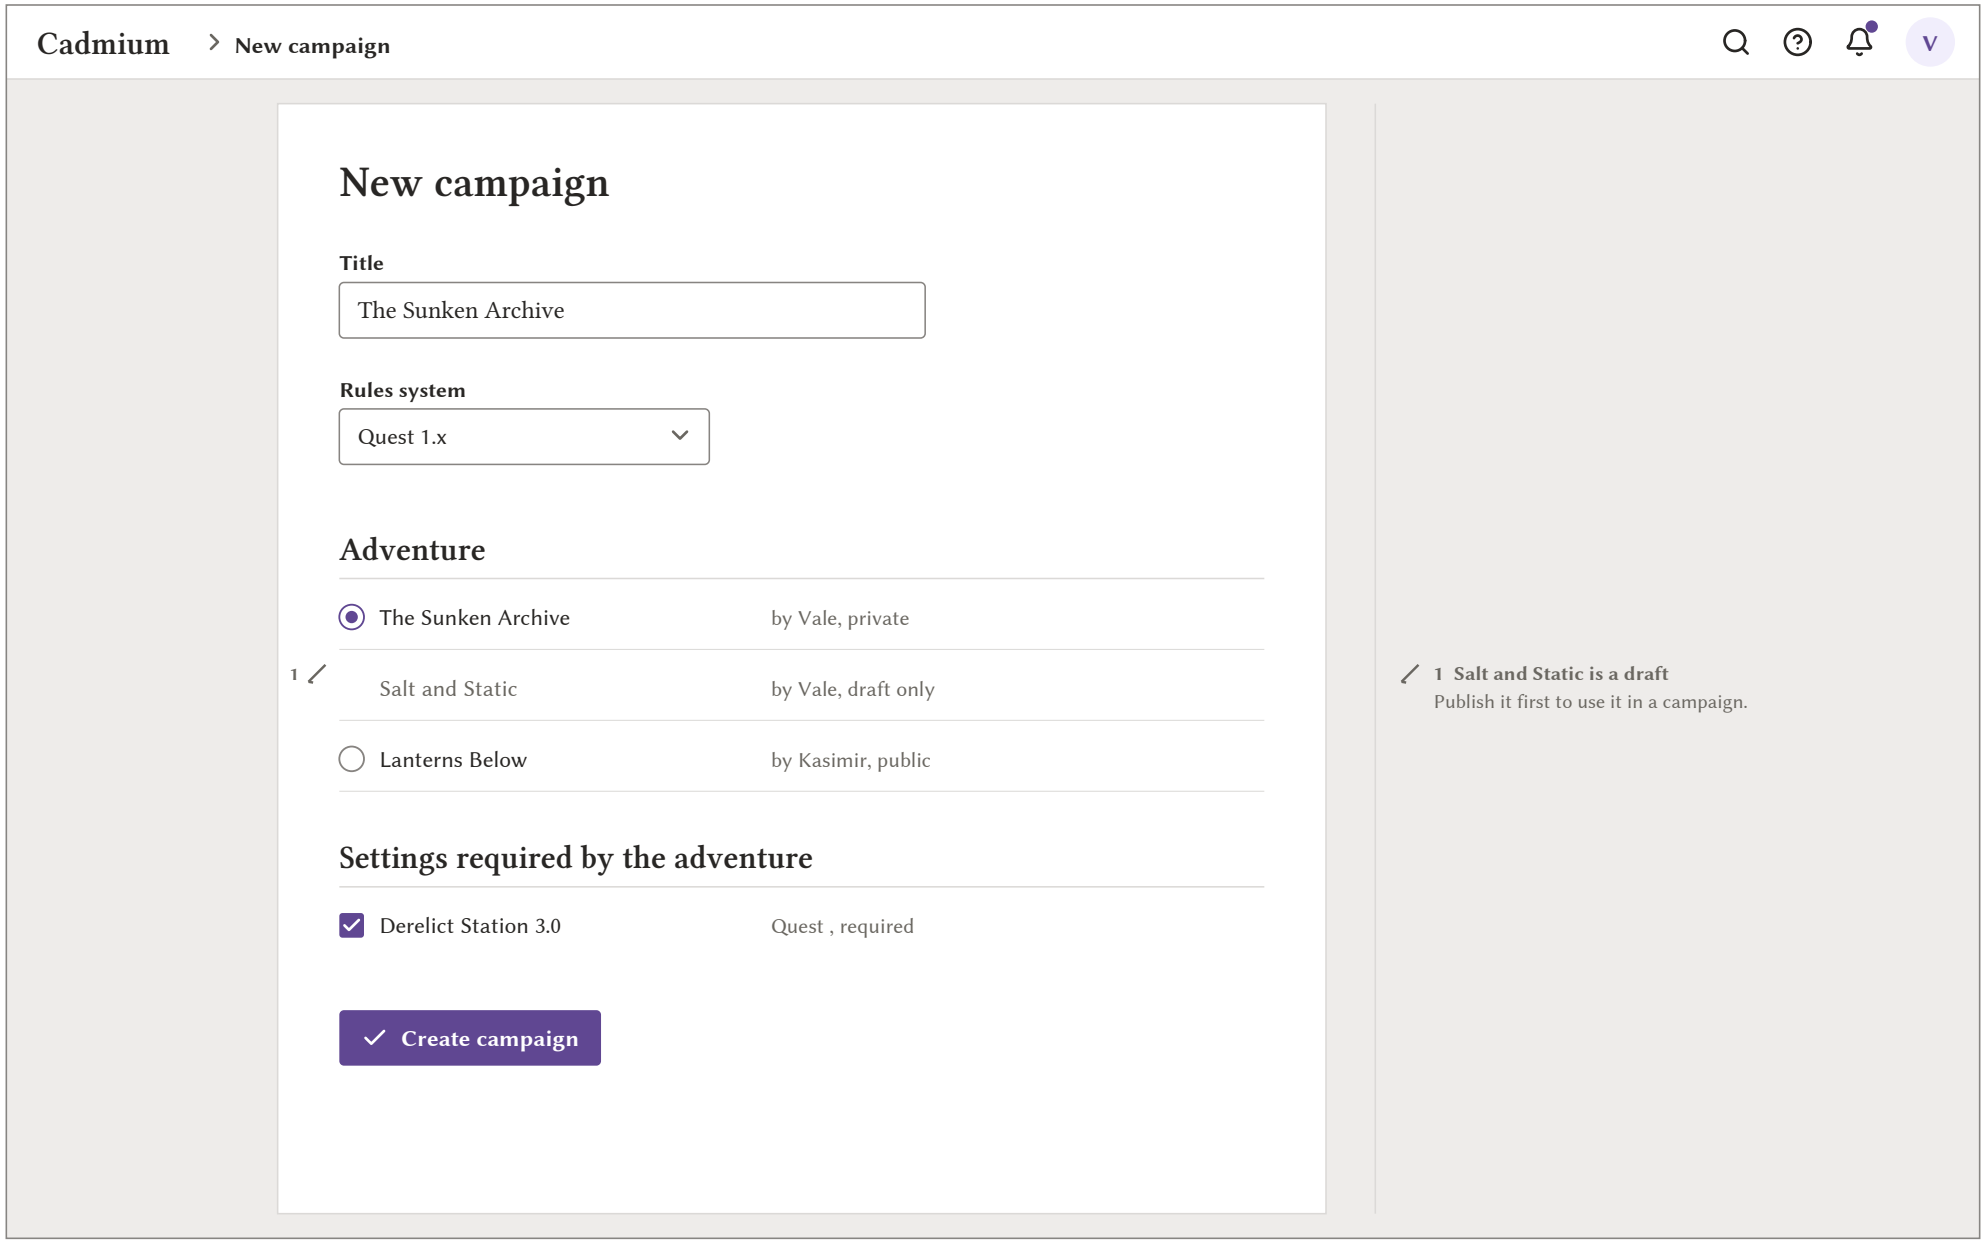

Character

The sheet is read-only; the rules system builds it. Name and answers are editable. Content icons mark inventory items.

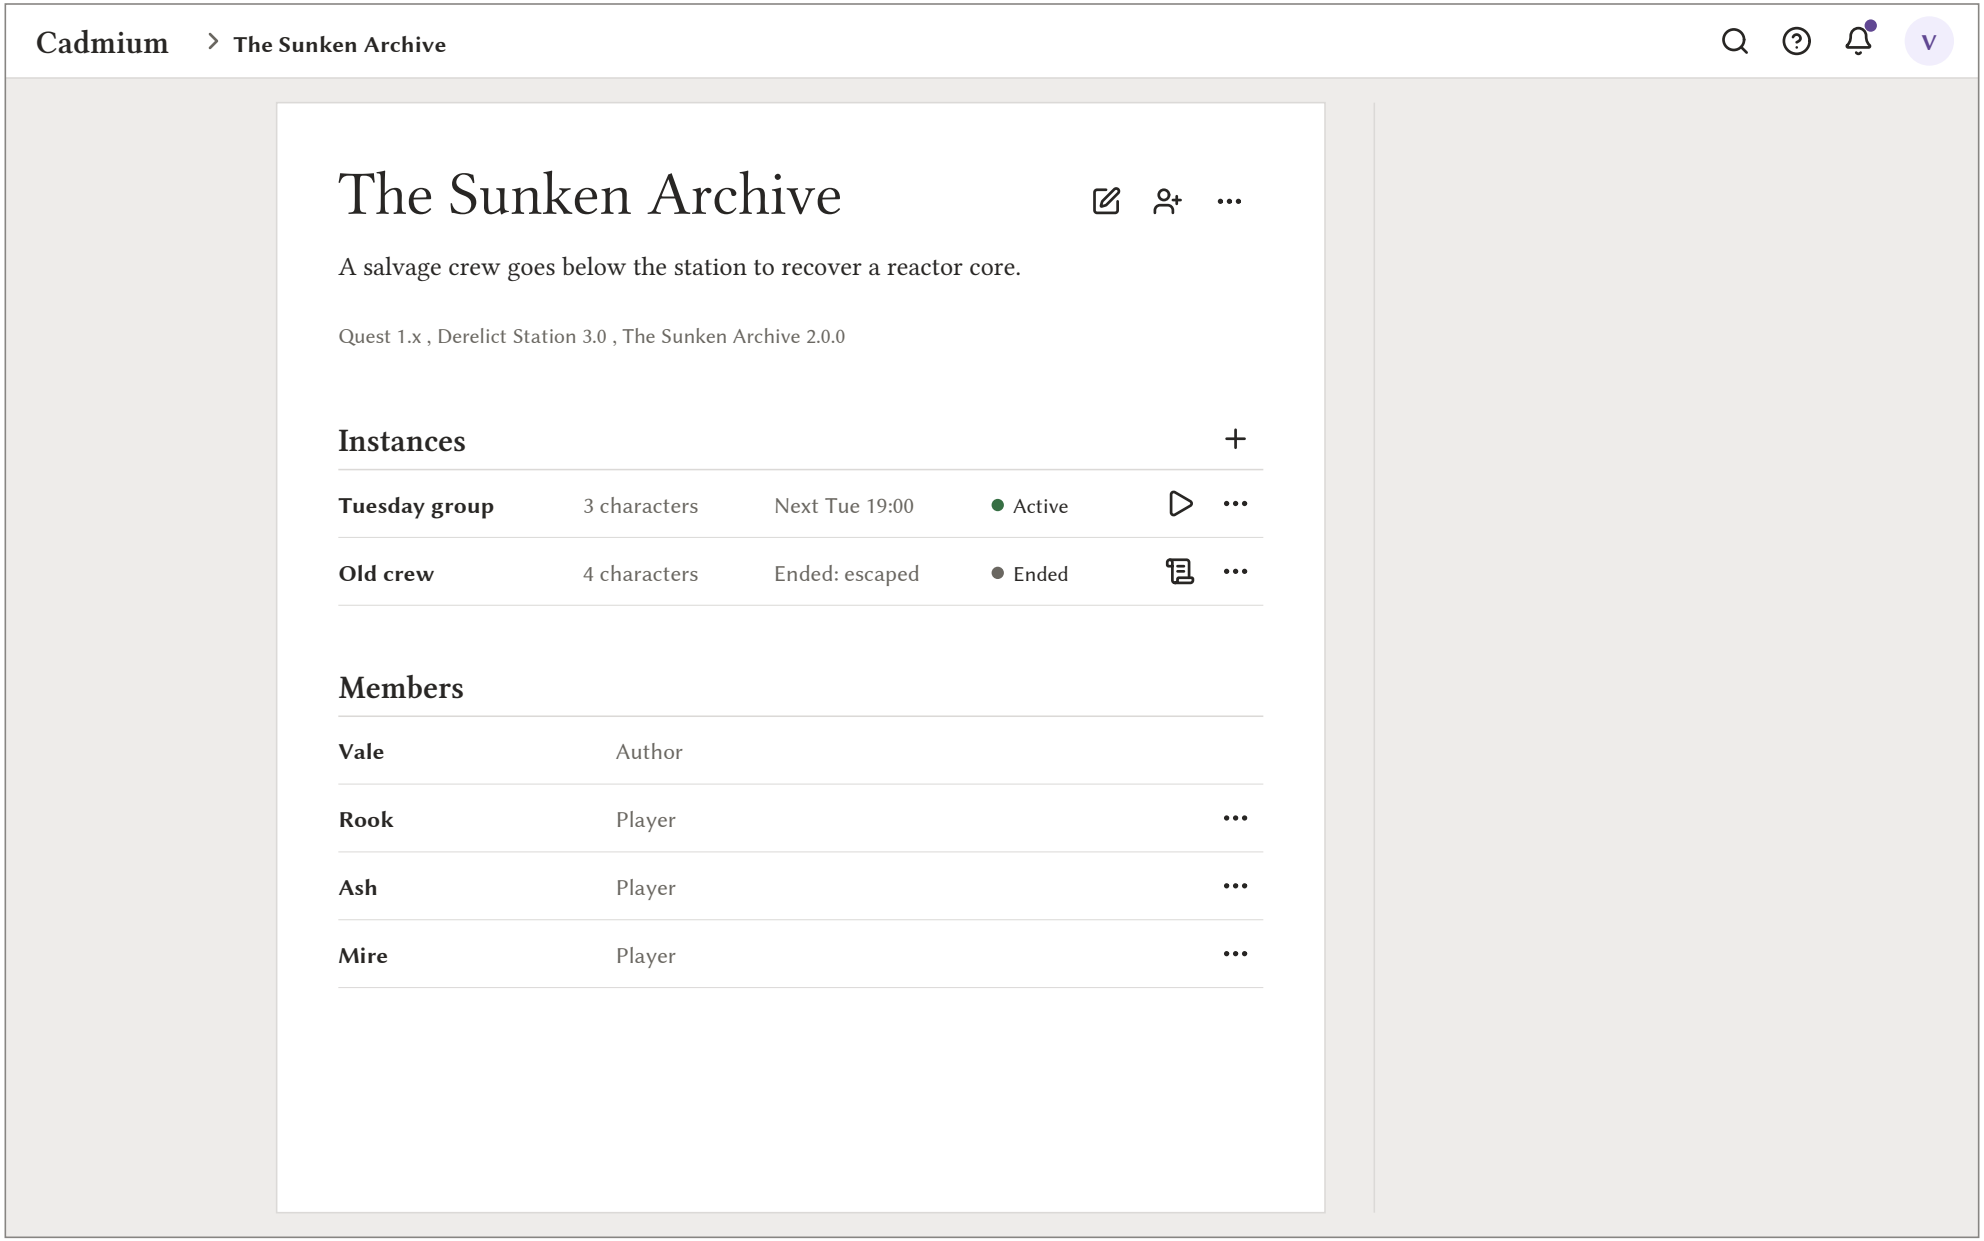

New campaign

Title, rules system, and materials. Materials are filtered to the chosen system; incompatible ones are listed with the reason.

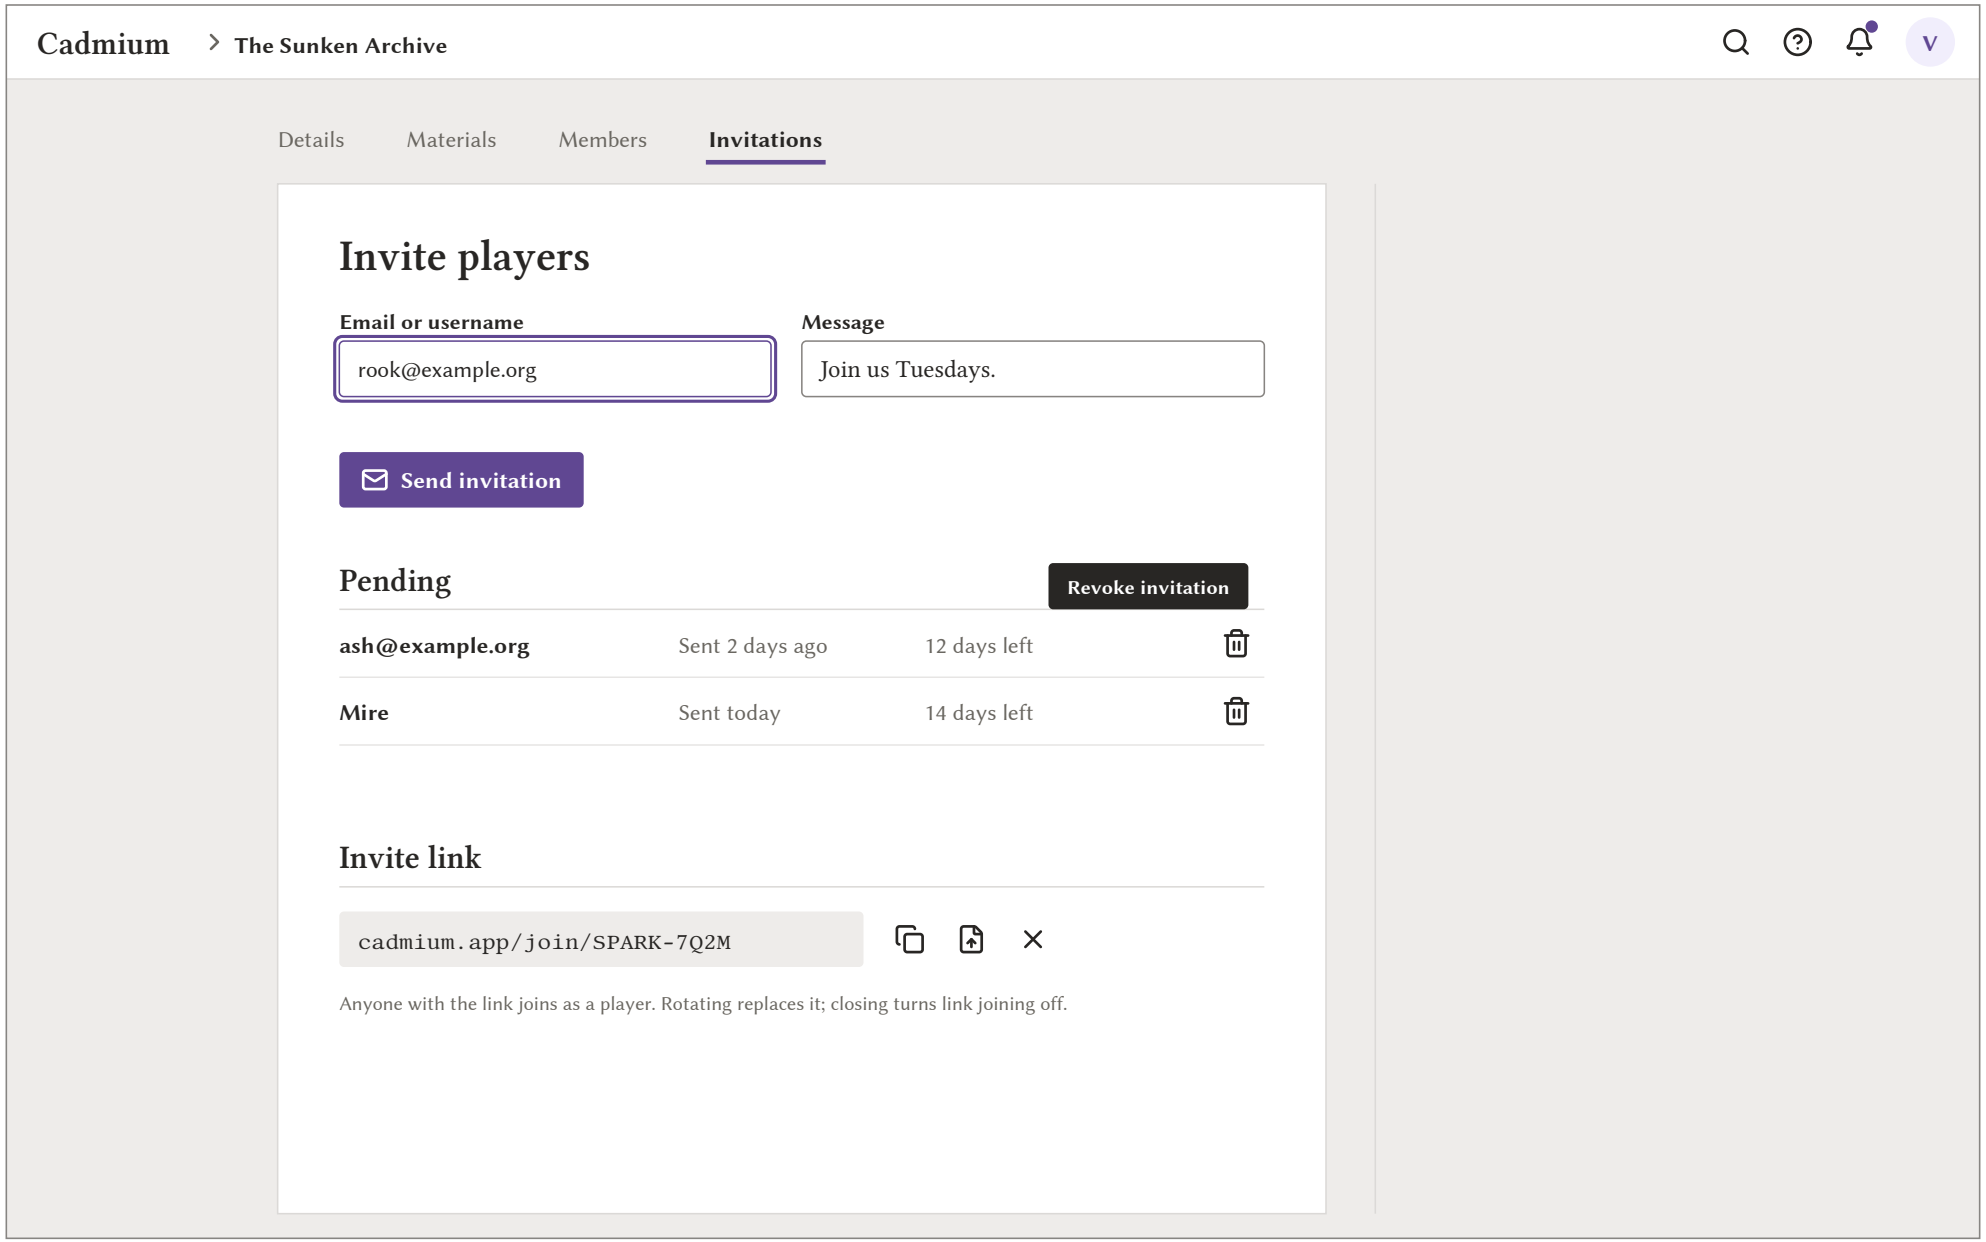

Campaign

Overview for members. The author sees edit, invite, and new-instance actions.

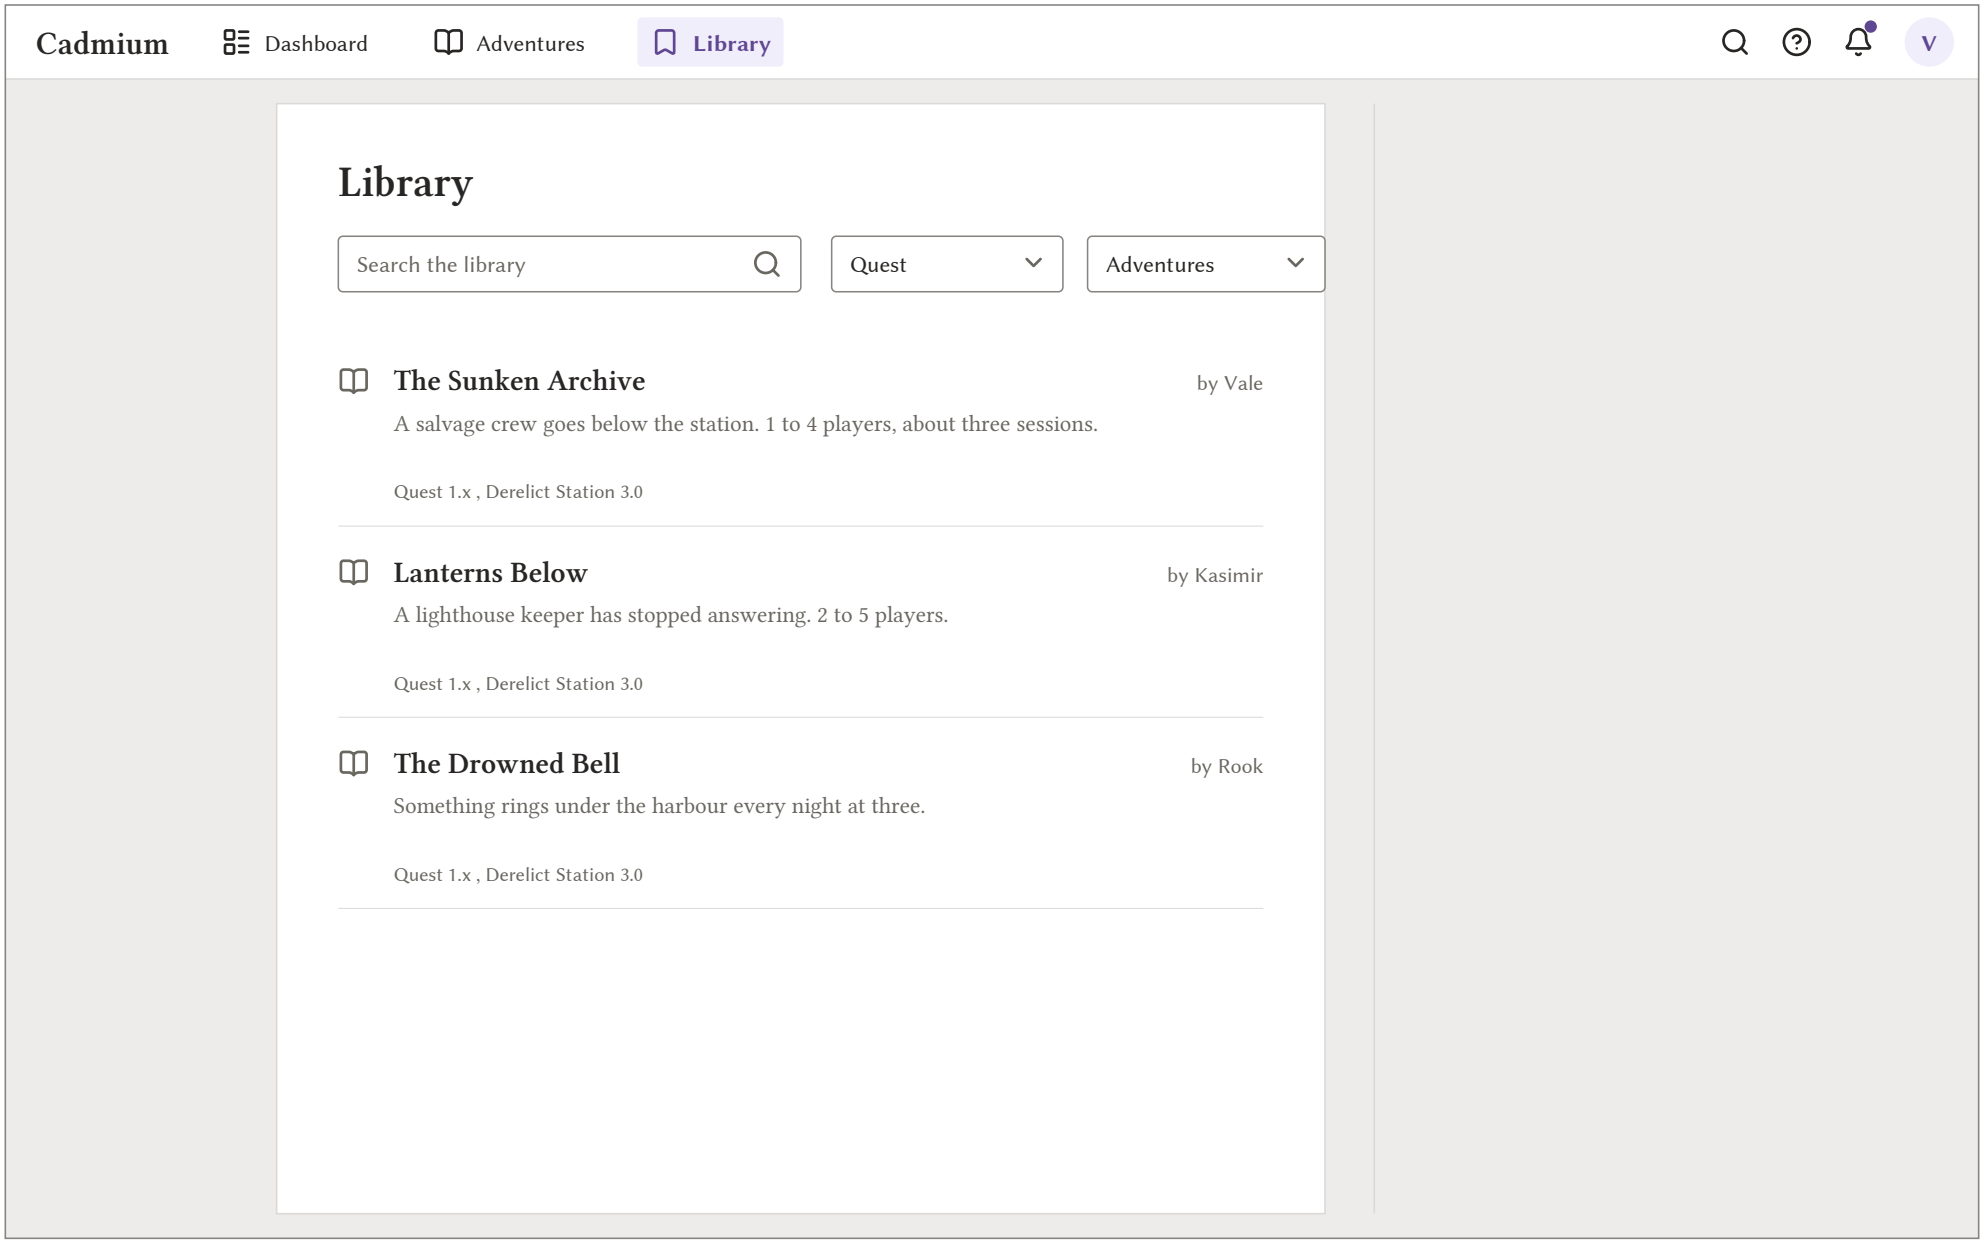

Campaign editor: invitations

Tabs on the desk above the page. Send invitation keeps its label as the primary action; list actions are icon buttons.

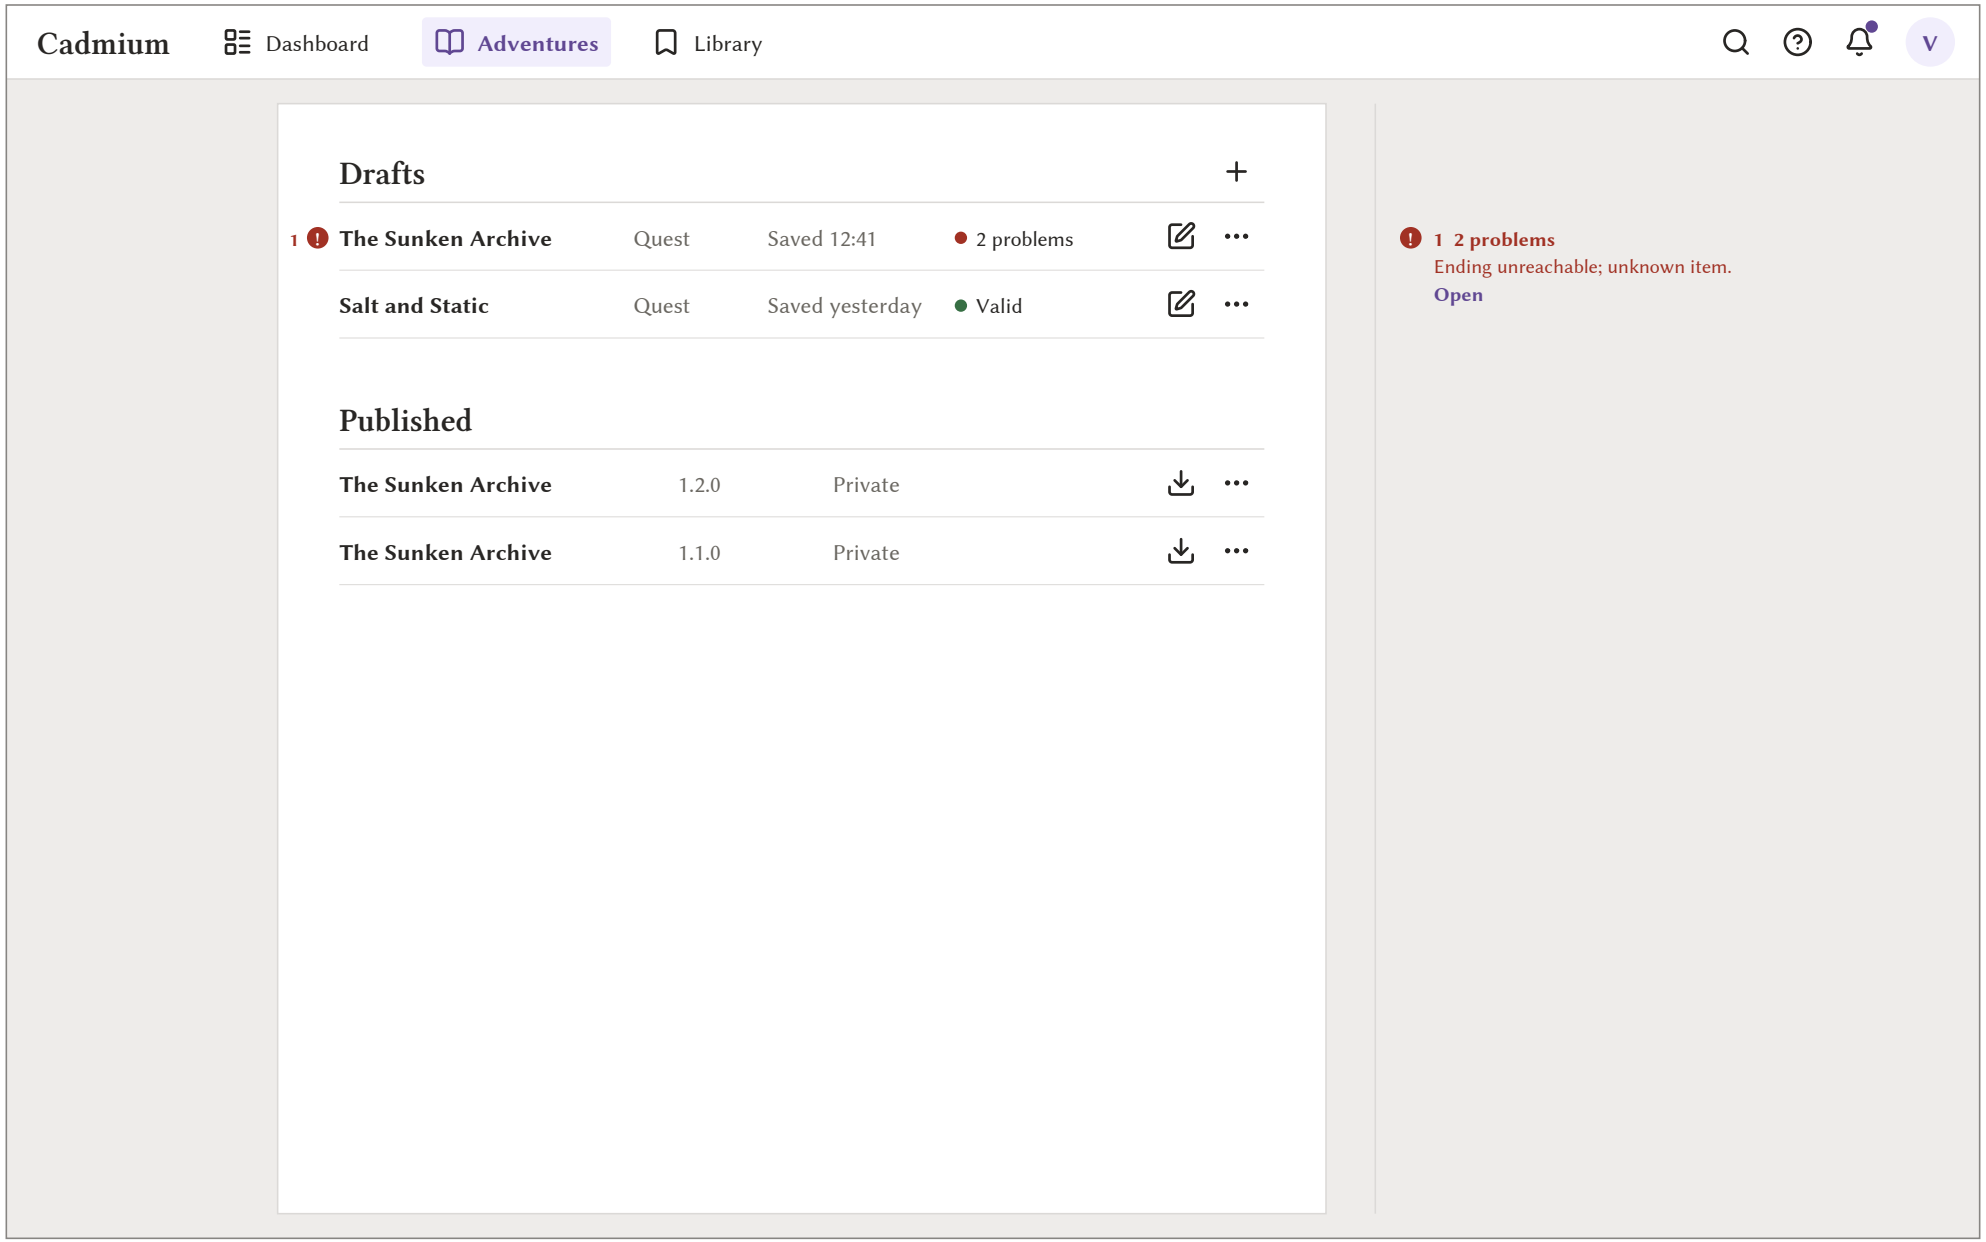

Library

Published settings and adventures, filtered by rules system and kind.

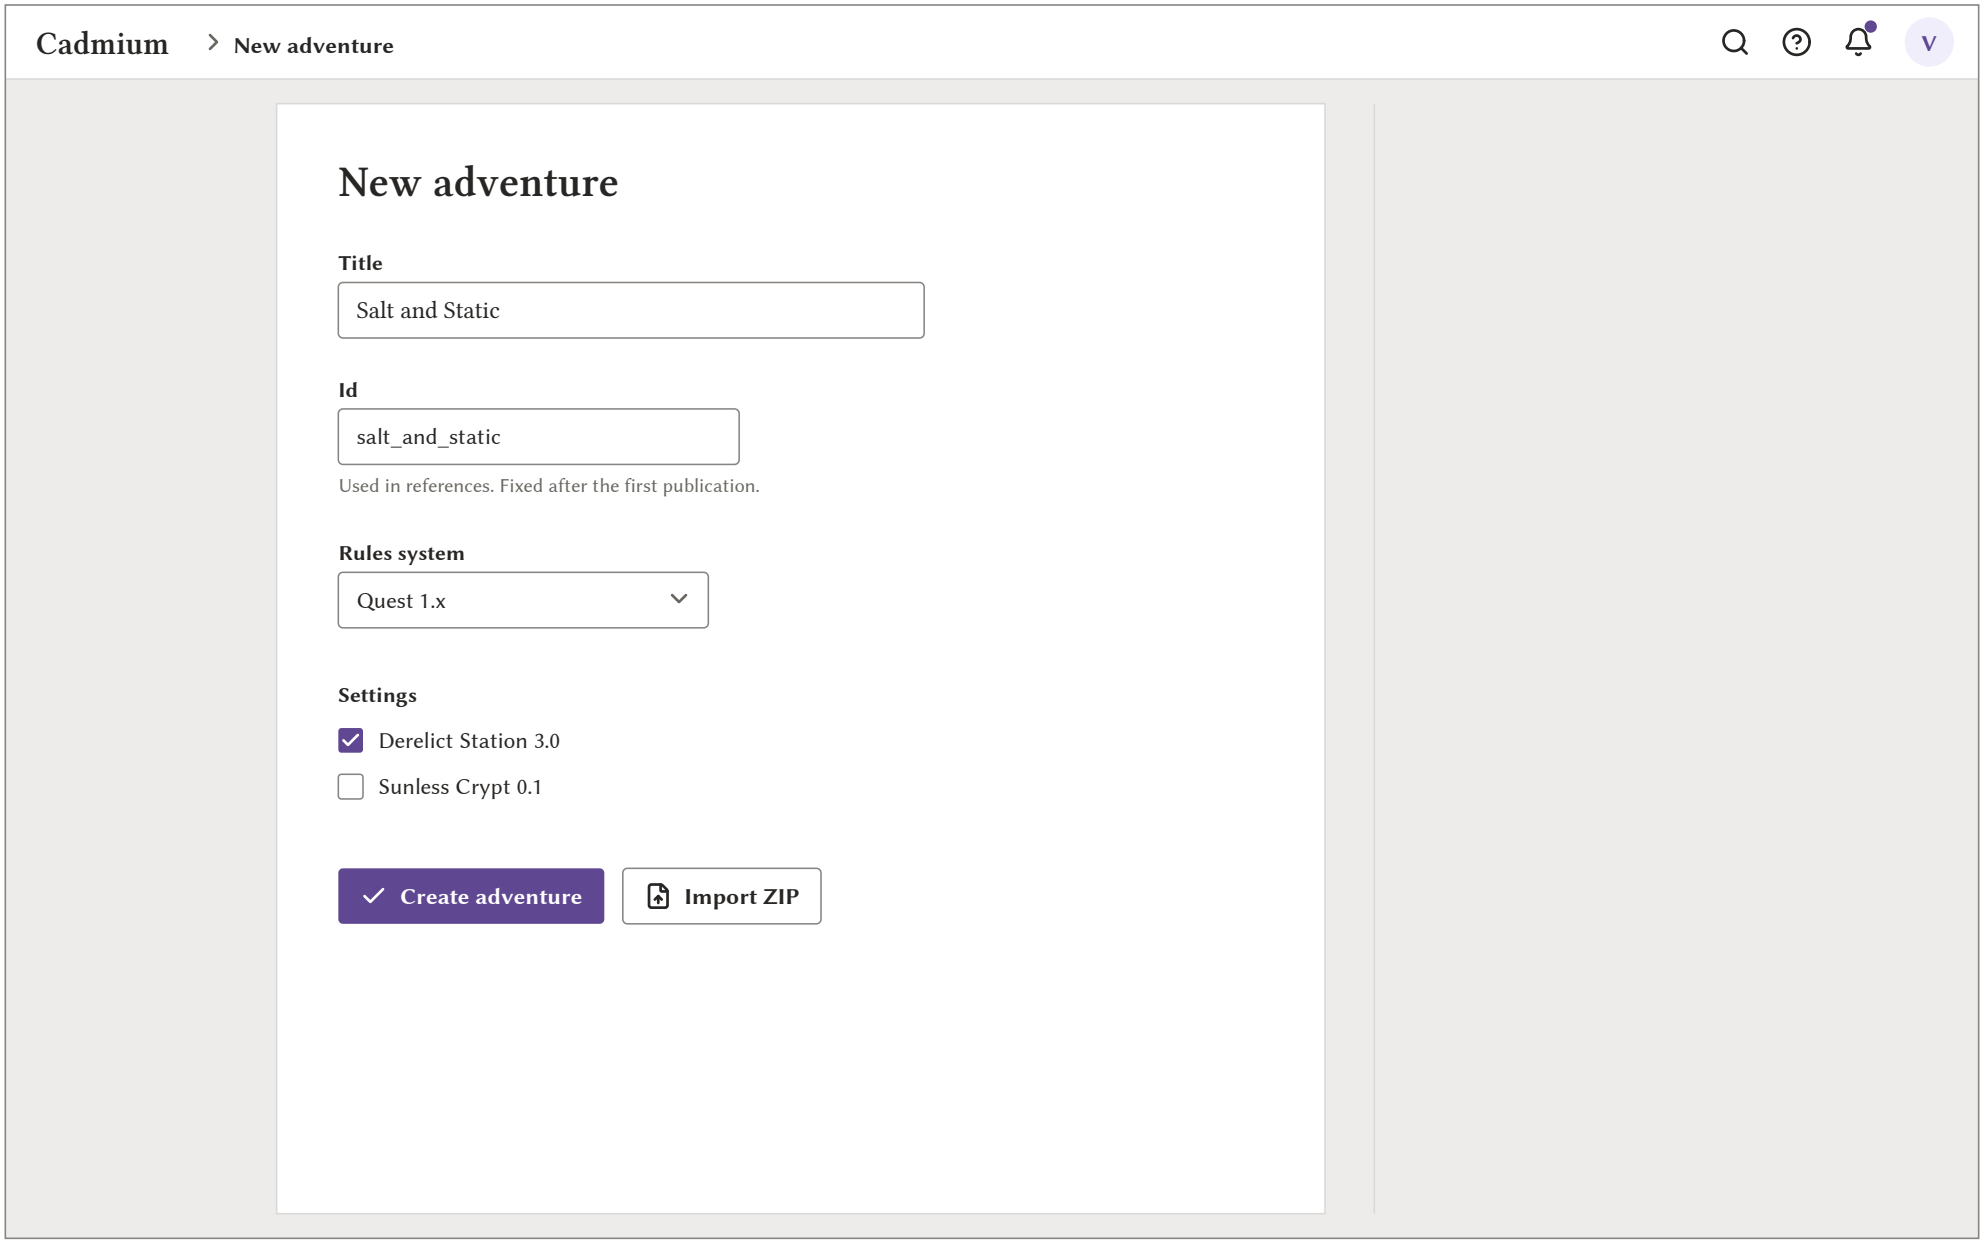

Adventures

The user's drafts and published versions. Problem counts sit in the gutter, the problems in the margin.

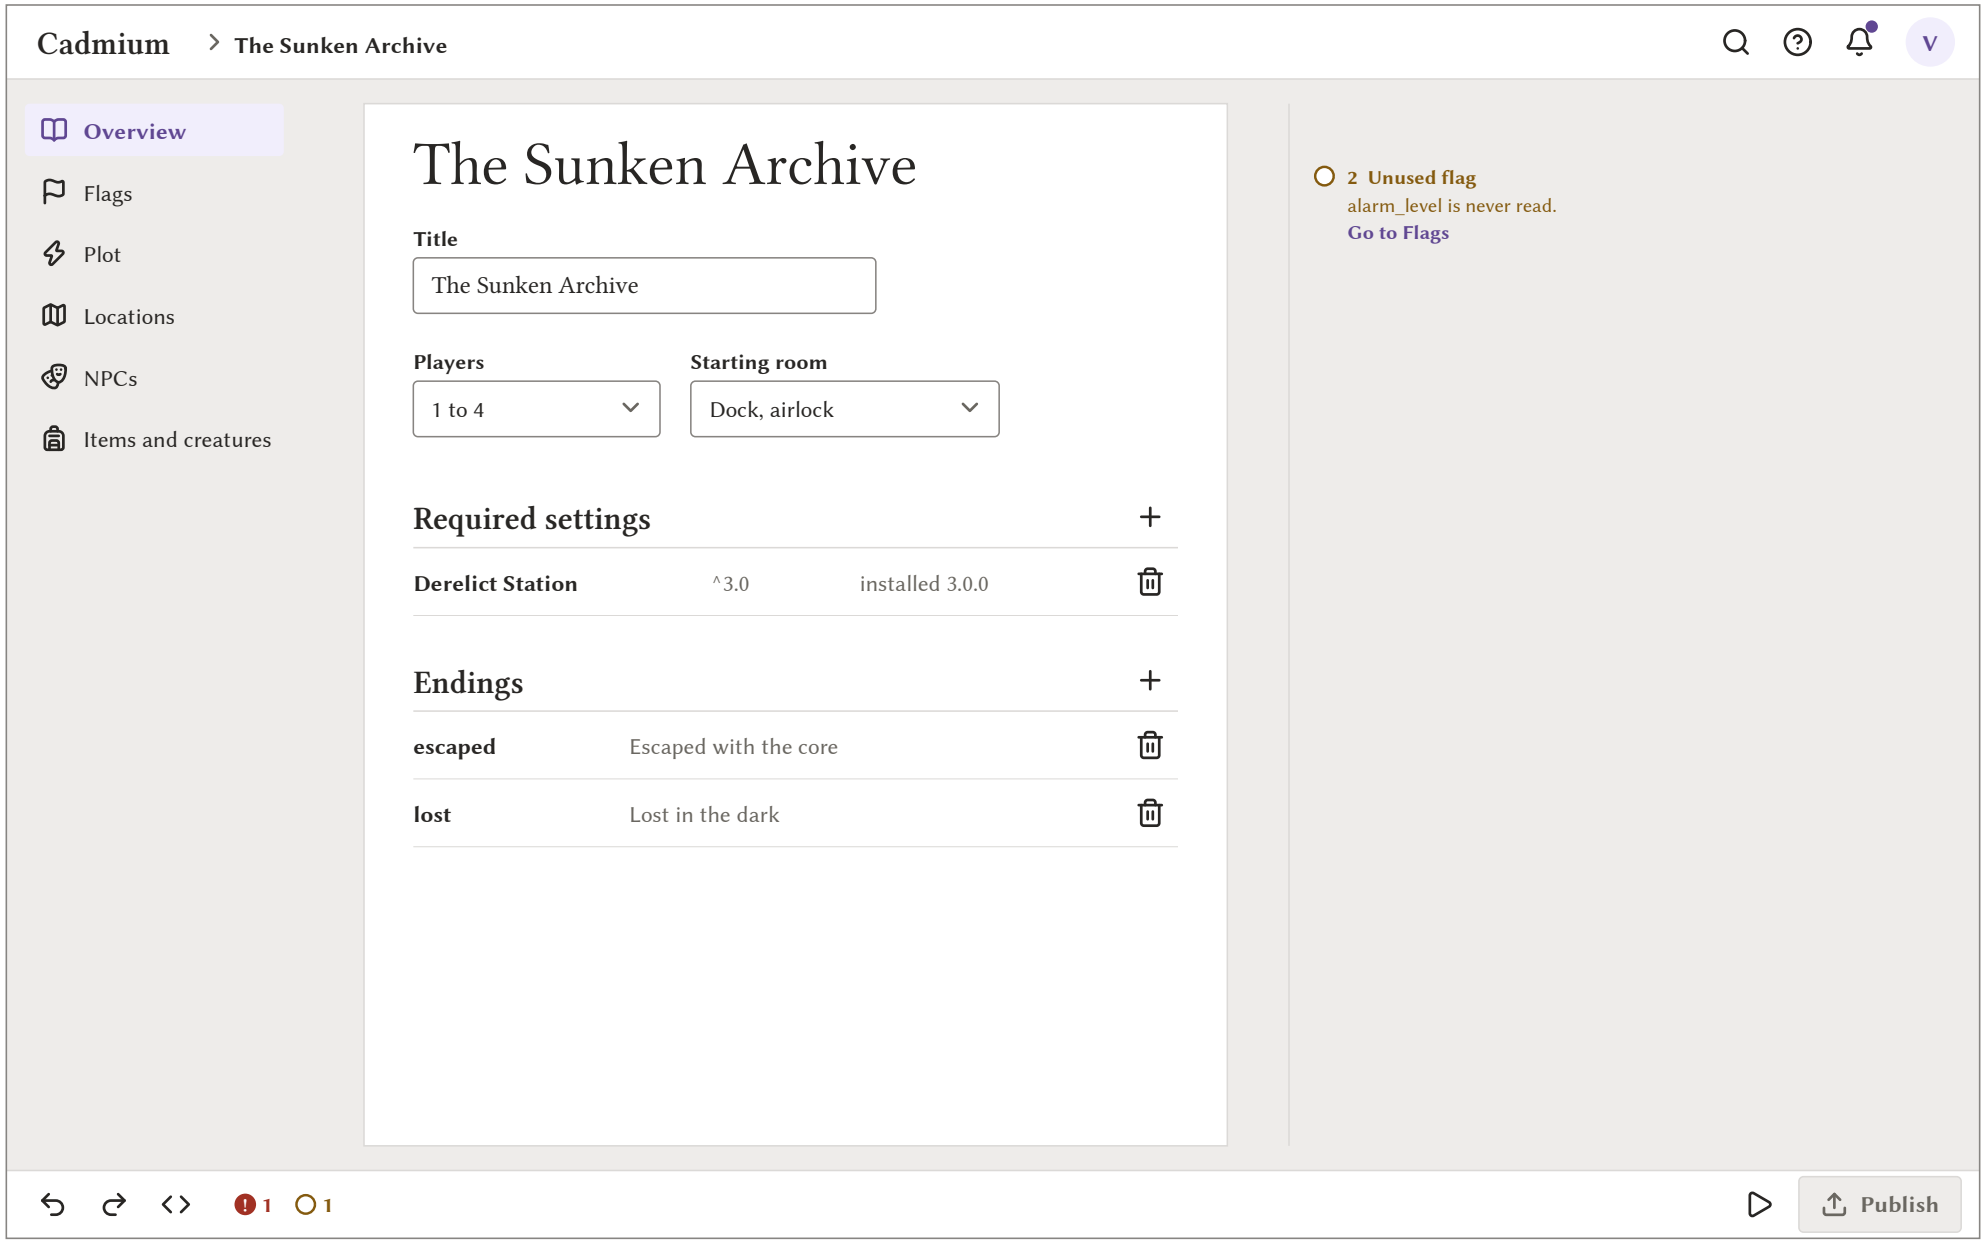

New adventure

Id, title, rules system, and required settings, or import a ZIP of YAML files.

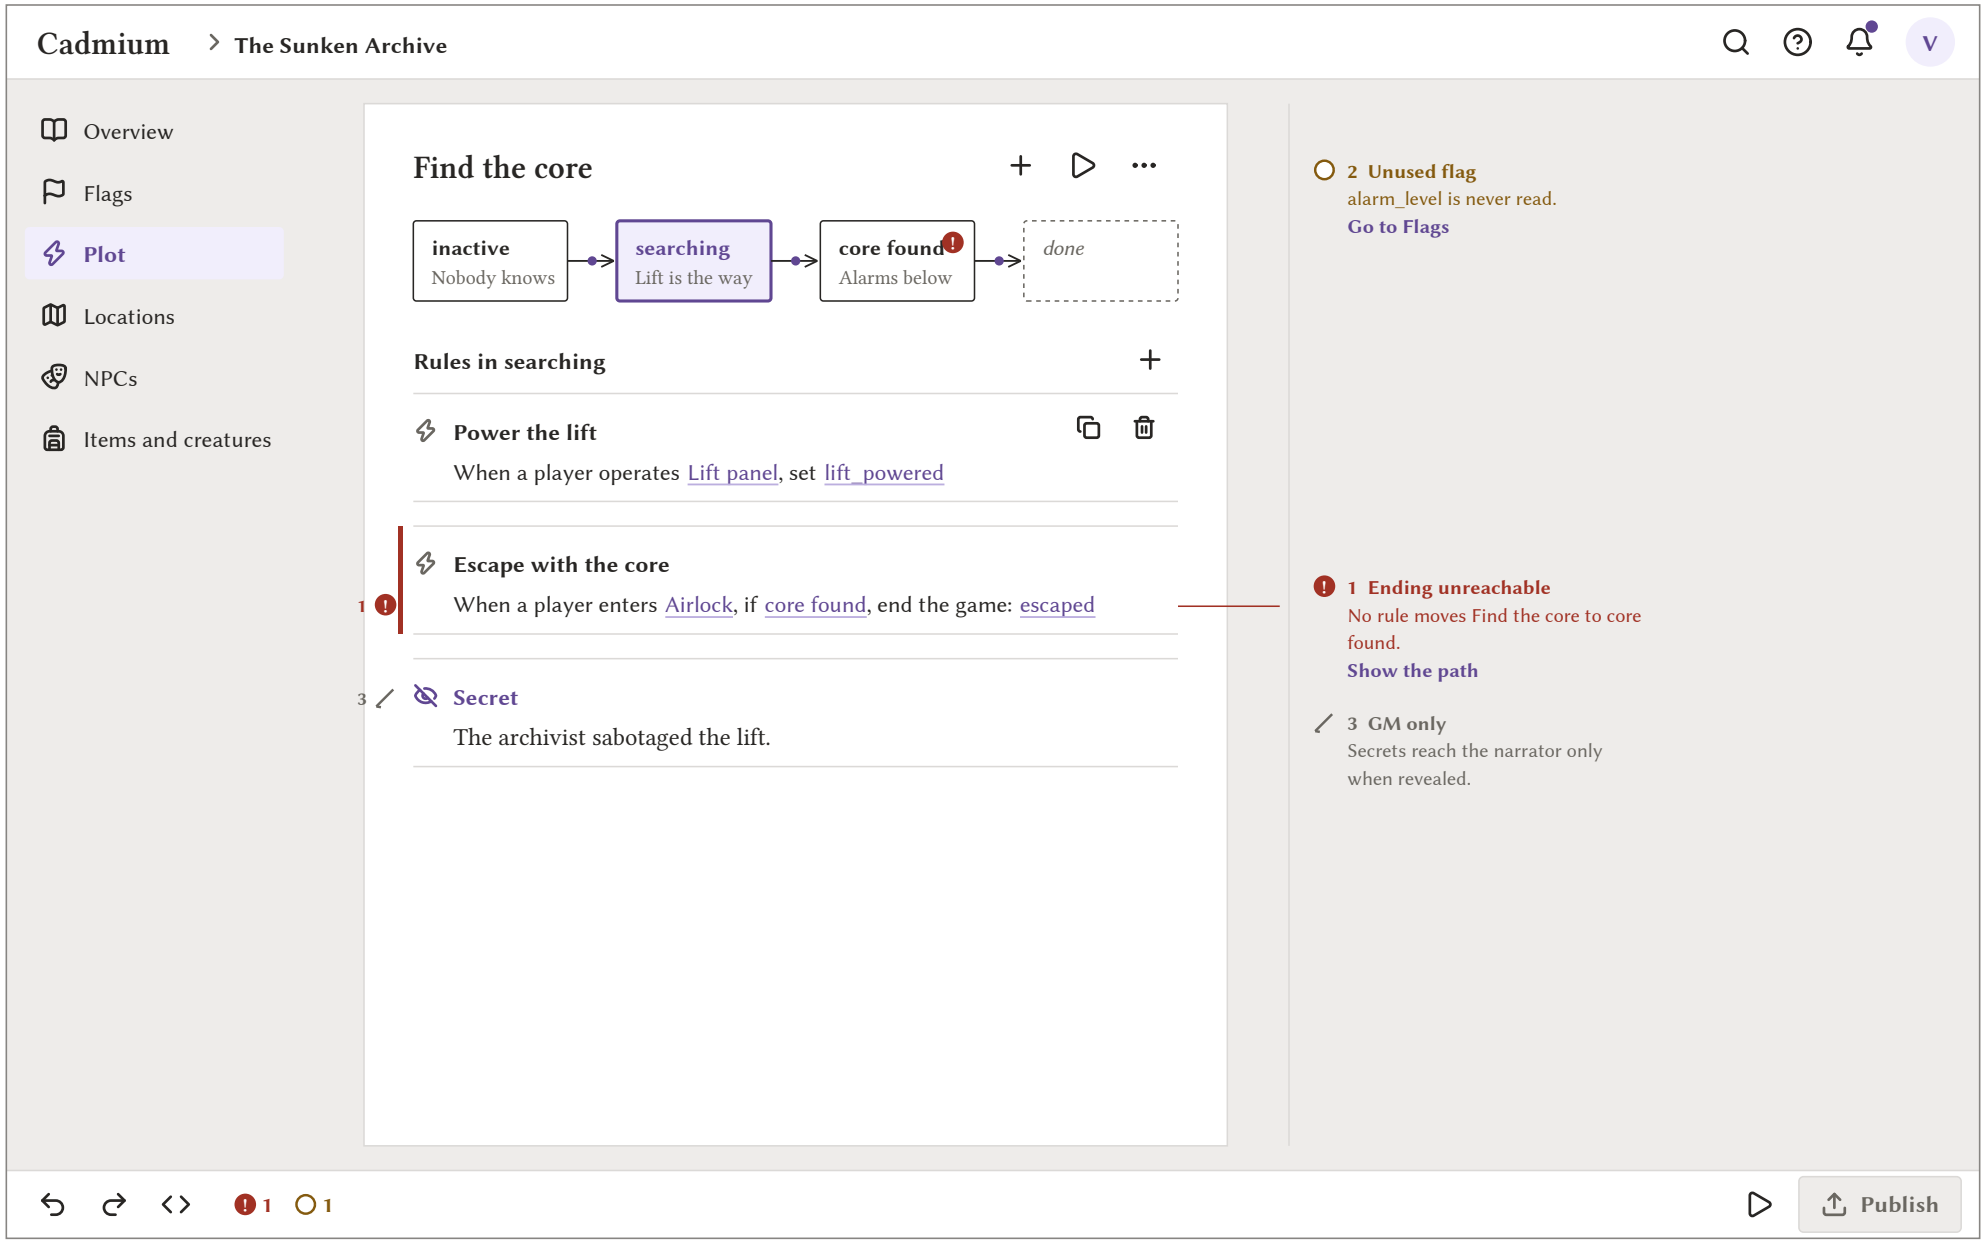

Adventure editor: Overview

Manifest as a form on the page. Endings are a list with add and delete actions.

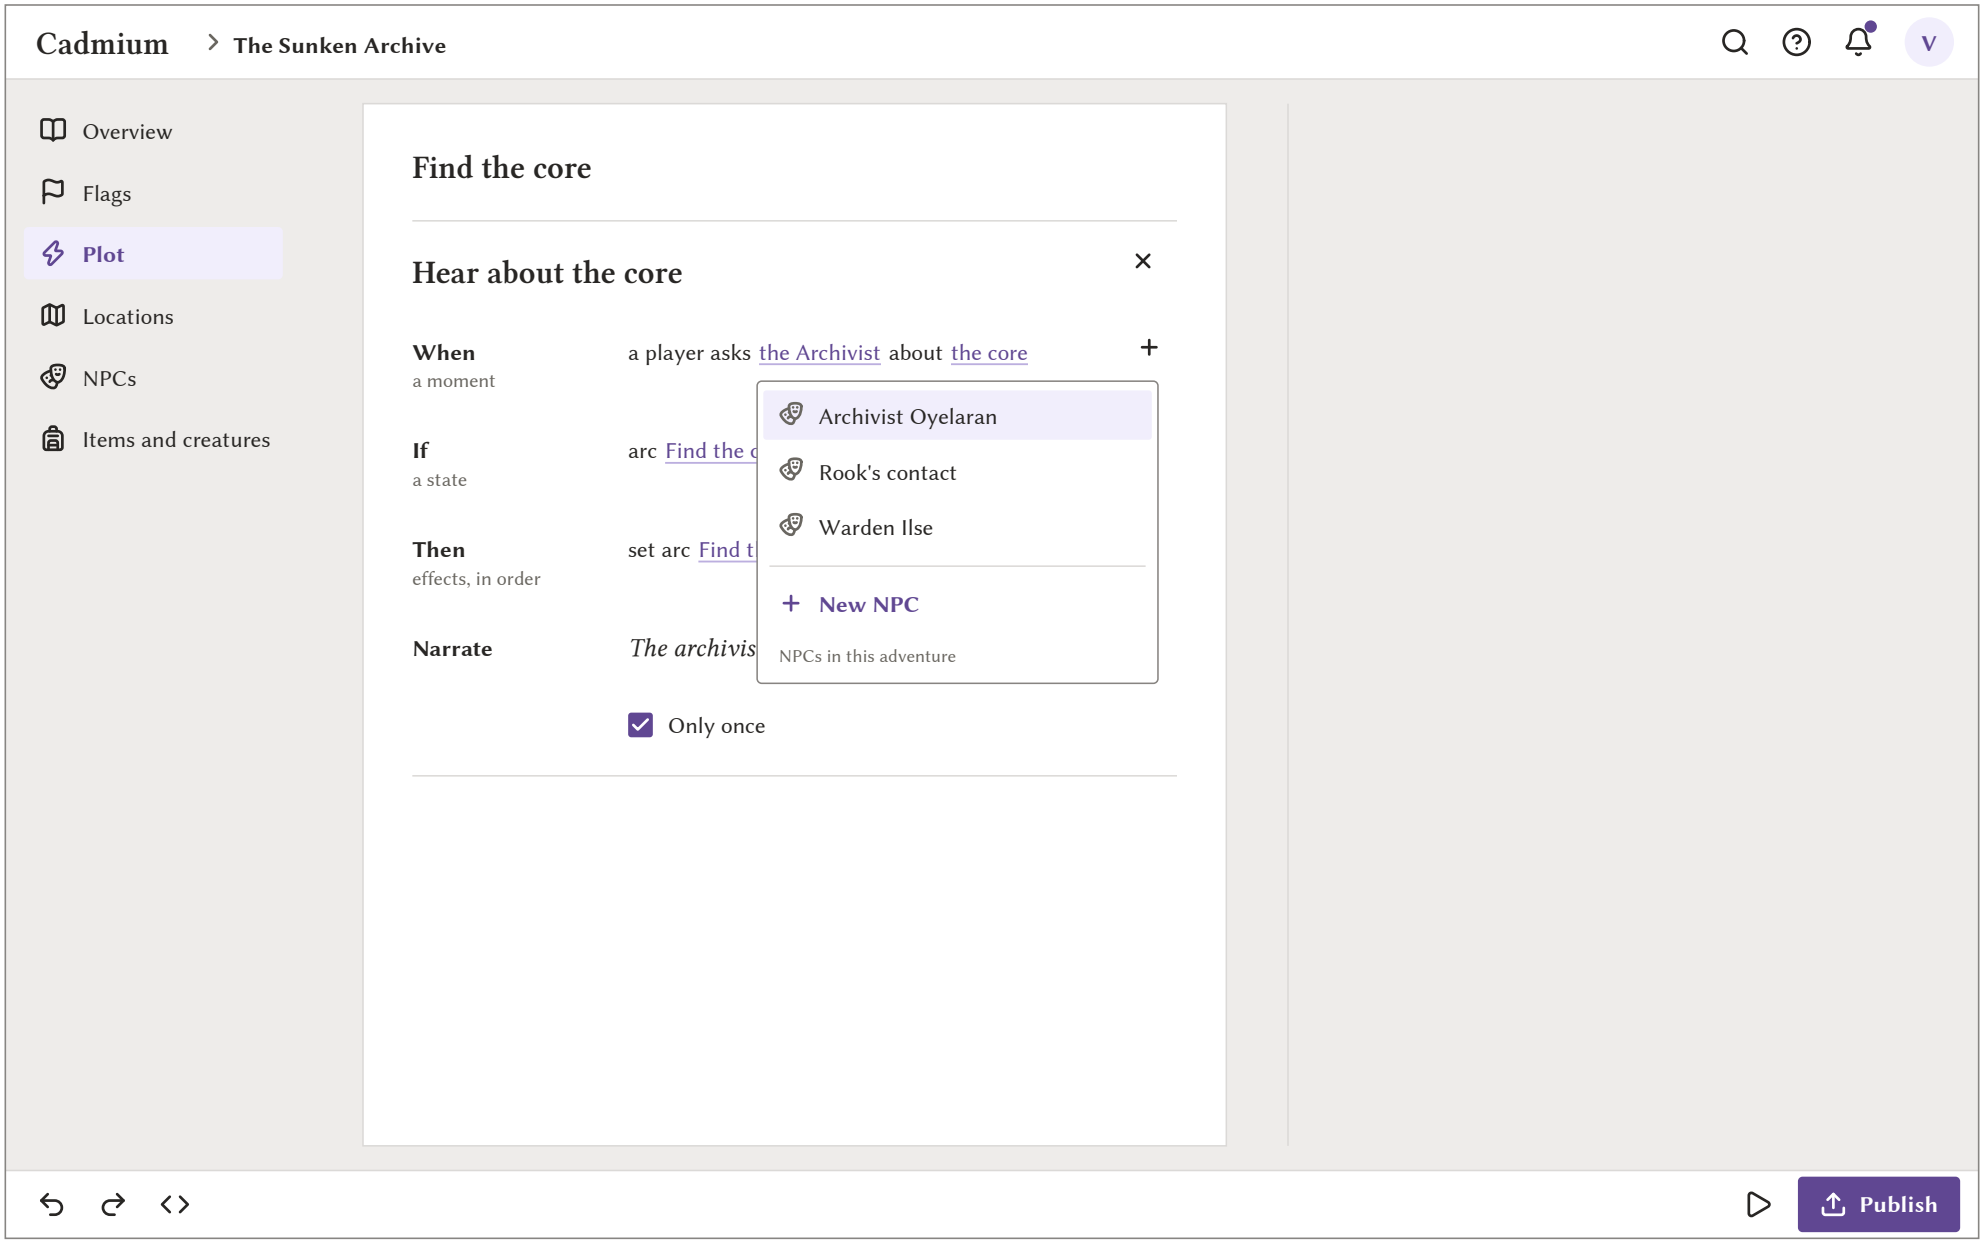

Adventure editor: Plot

The arc drawn on the page, its rules as inserts below. Notes sit in the margin beside the insert they concern; the focused one draws its leader.

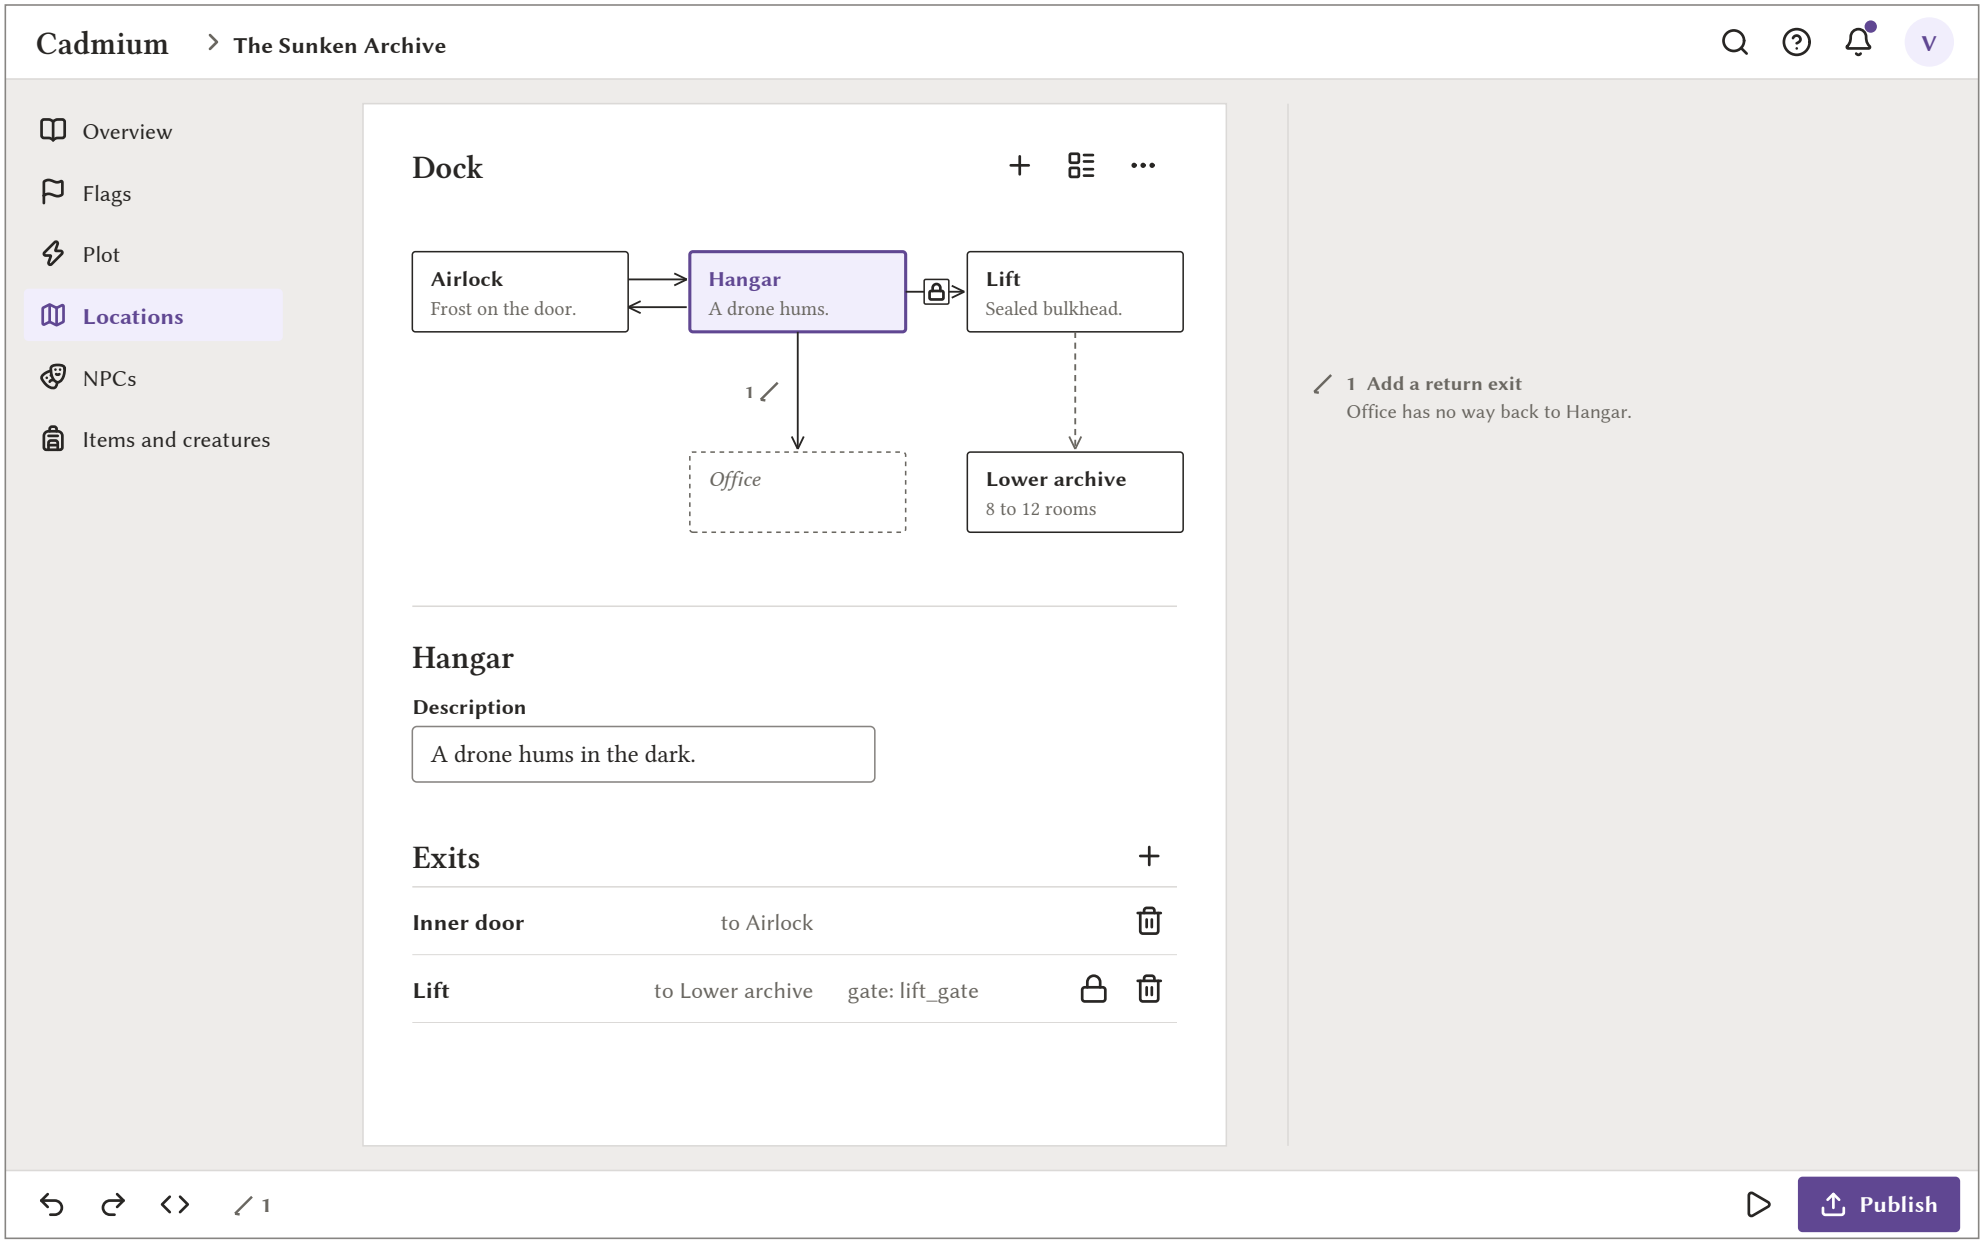

Adventure editor: rule expanded

When names a moment, If a state, Then the effects in order. Each picker offers only the right kind. A picker is open on the When row.

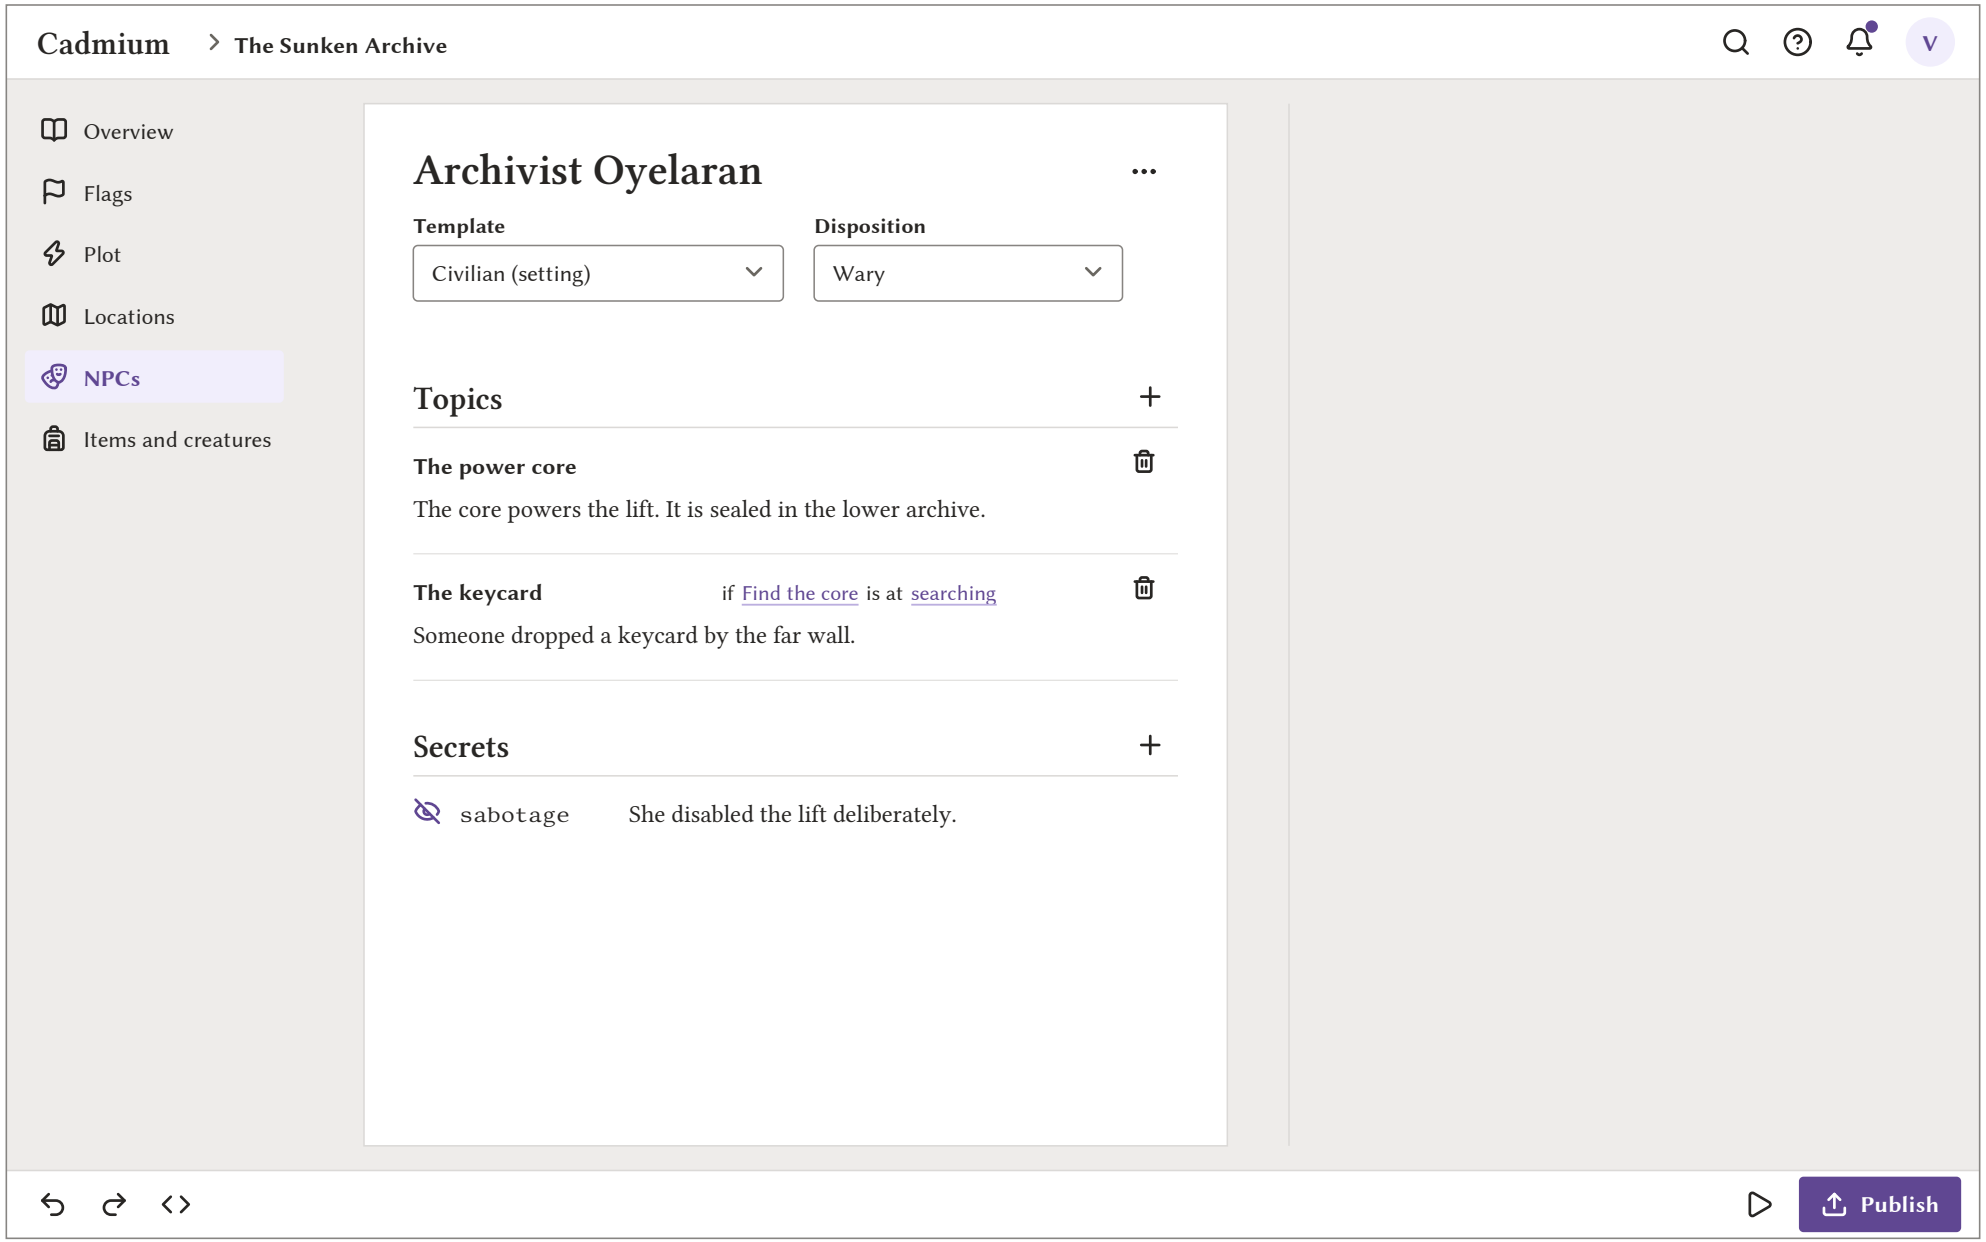

Adventure editor: Locations

Rooms as nodes, one-way exits as arrows, gates as squares on arrows. Dashed arrows lead into generated locations. The list view toggle edits the same data.

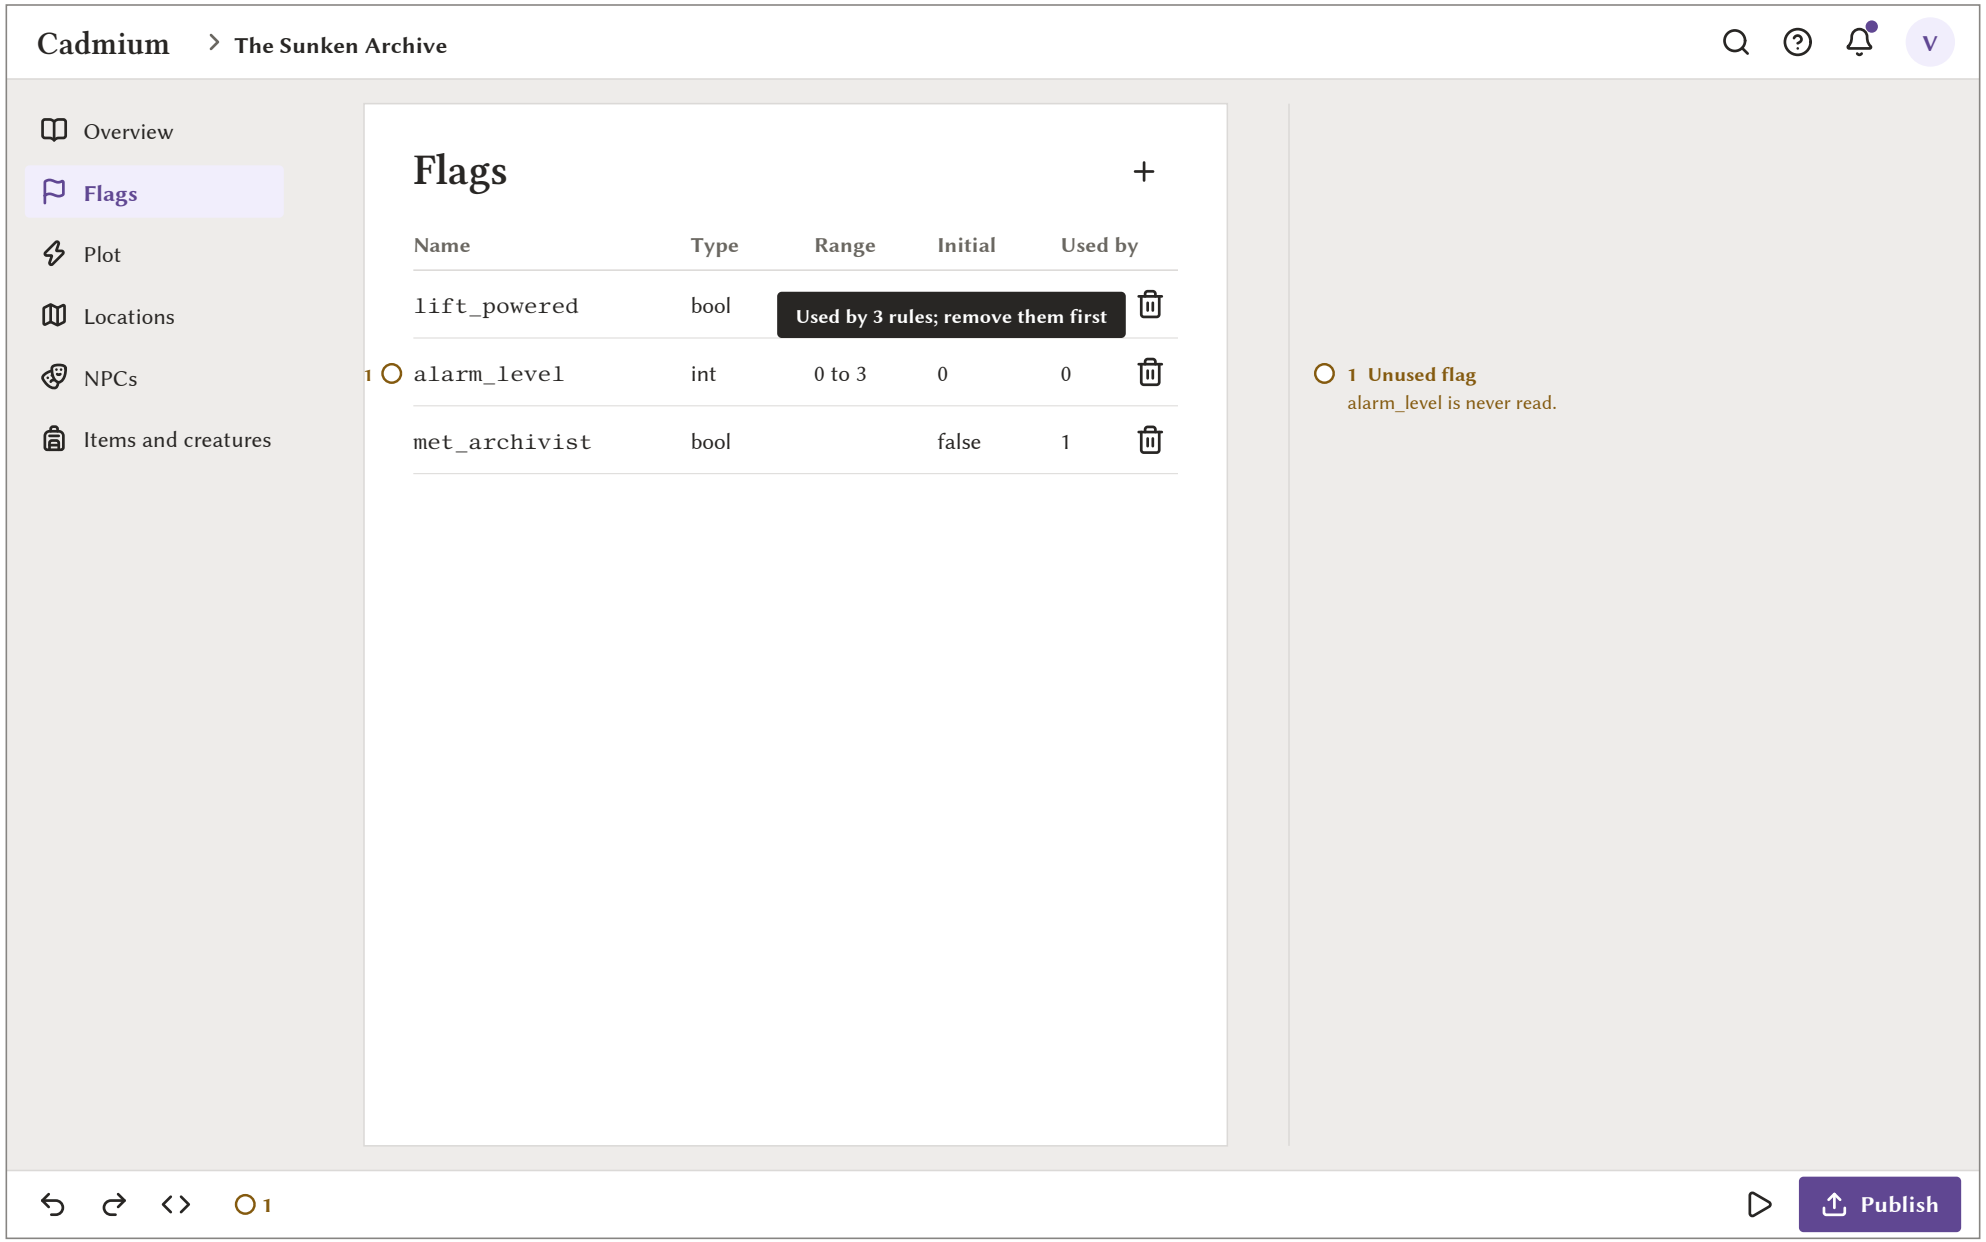

Adventure editor: NPCs

NPC record with topics. Each topic has an optional condition and a brief the narrator may use. Secrets stay hidden until revealed.

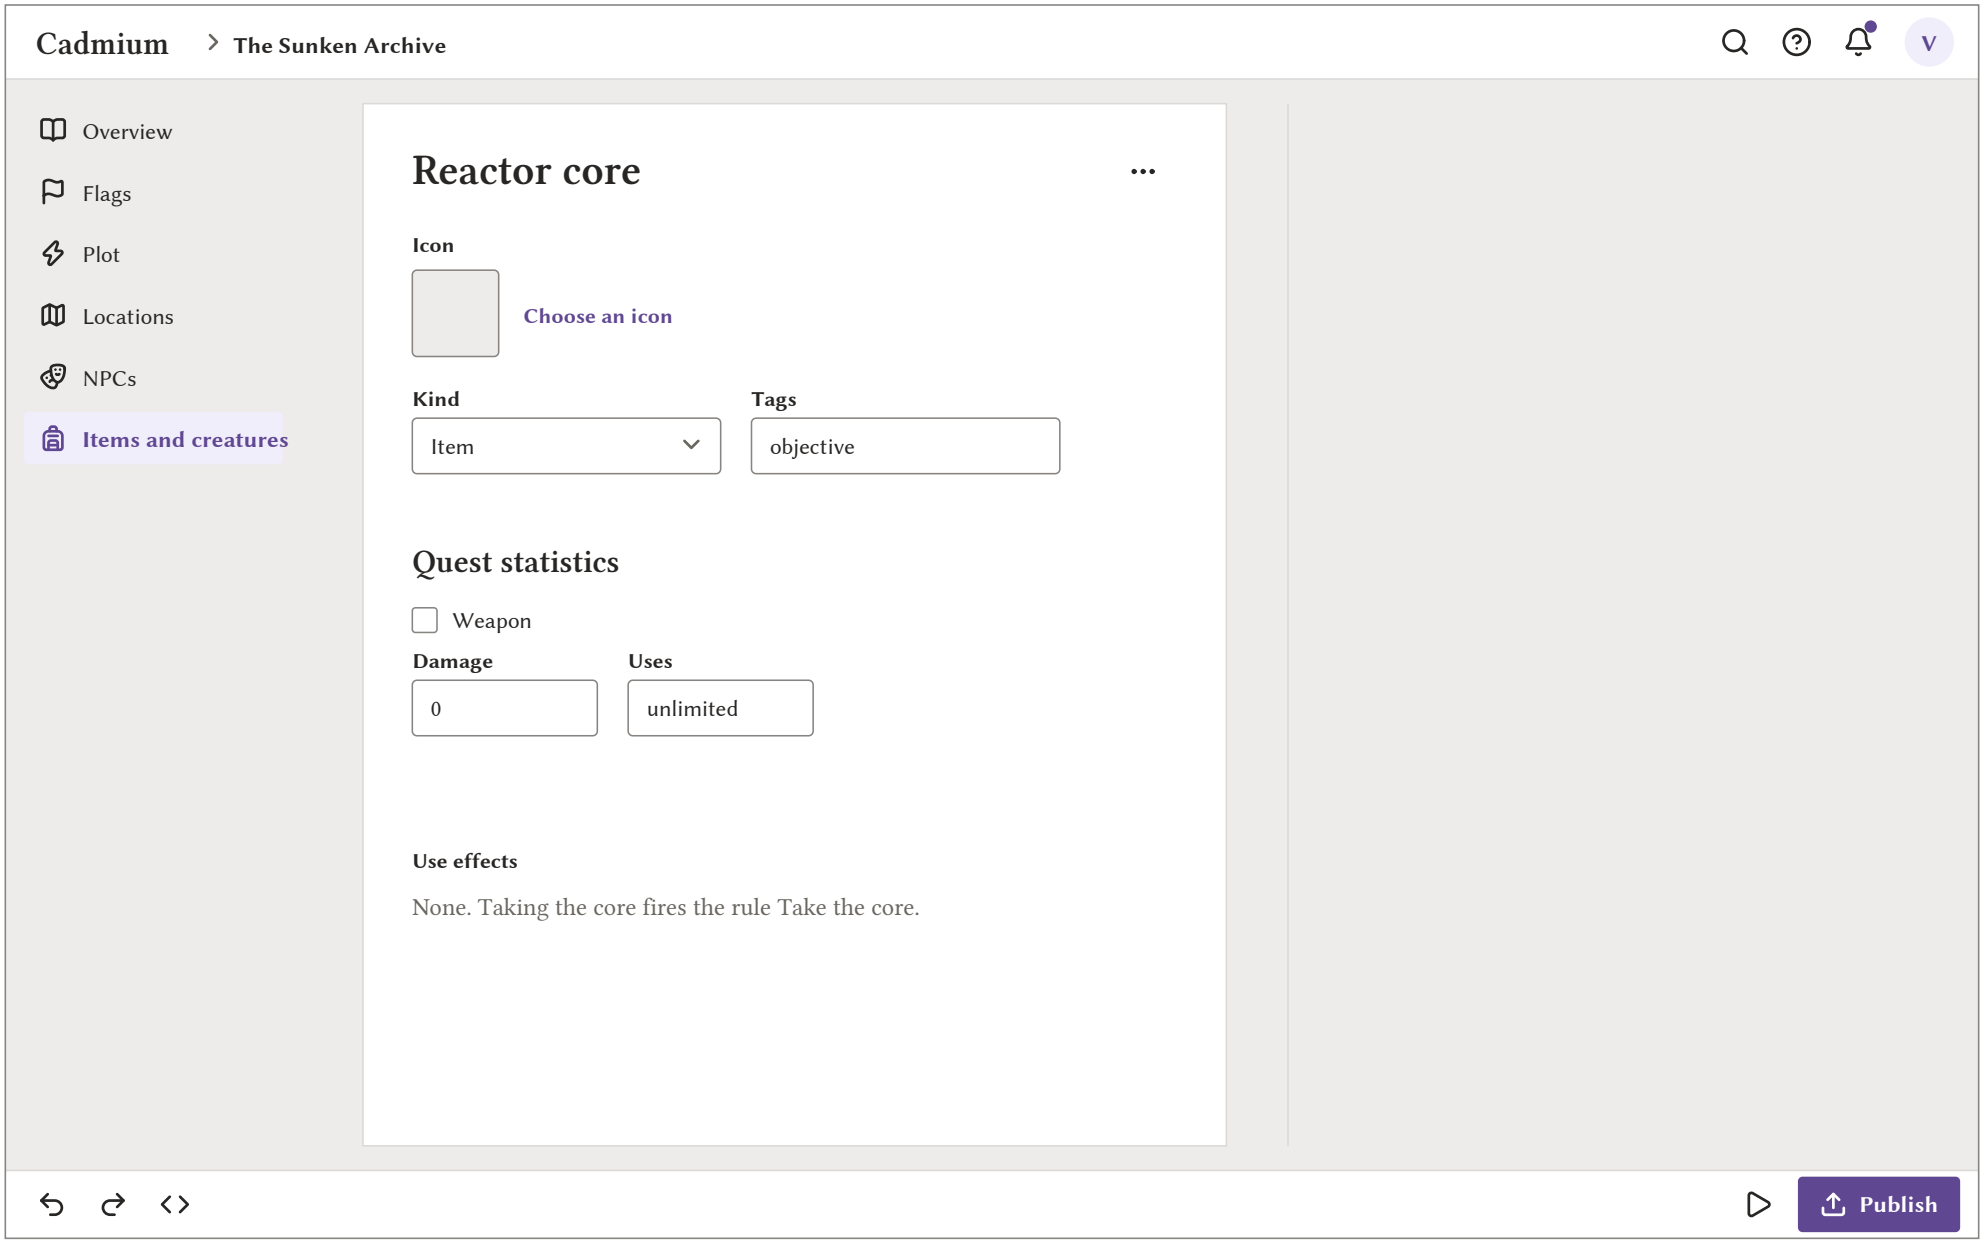

Adventure editor: Flags

A table. Deleting a flag that is in use is blocked, with the list of uses in a tooltip.

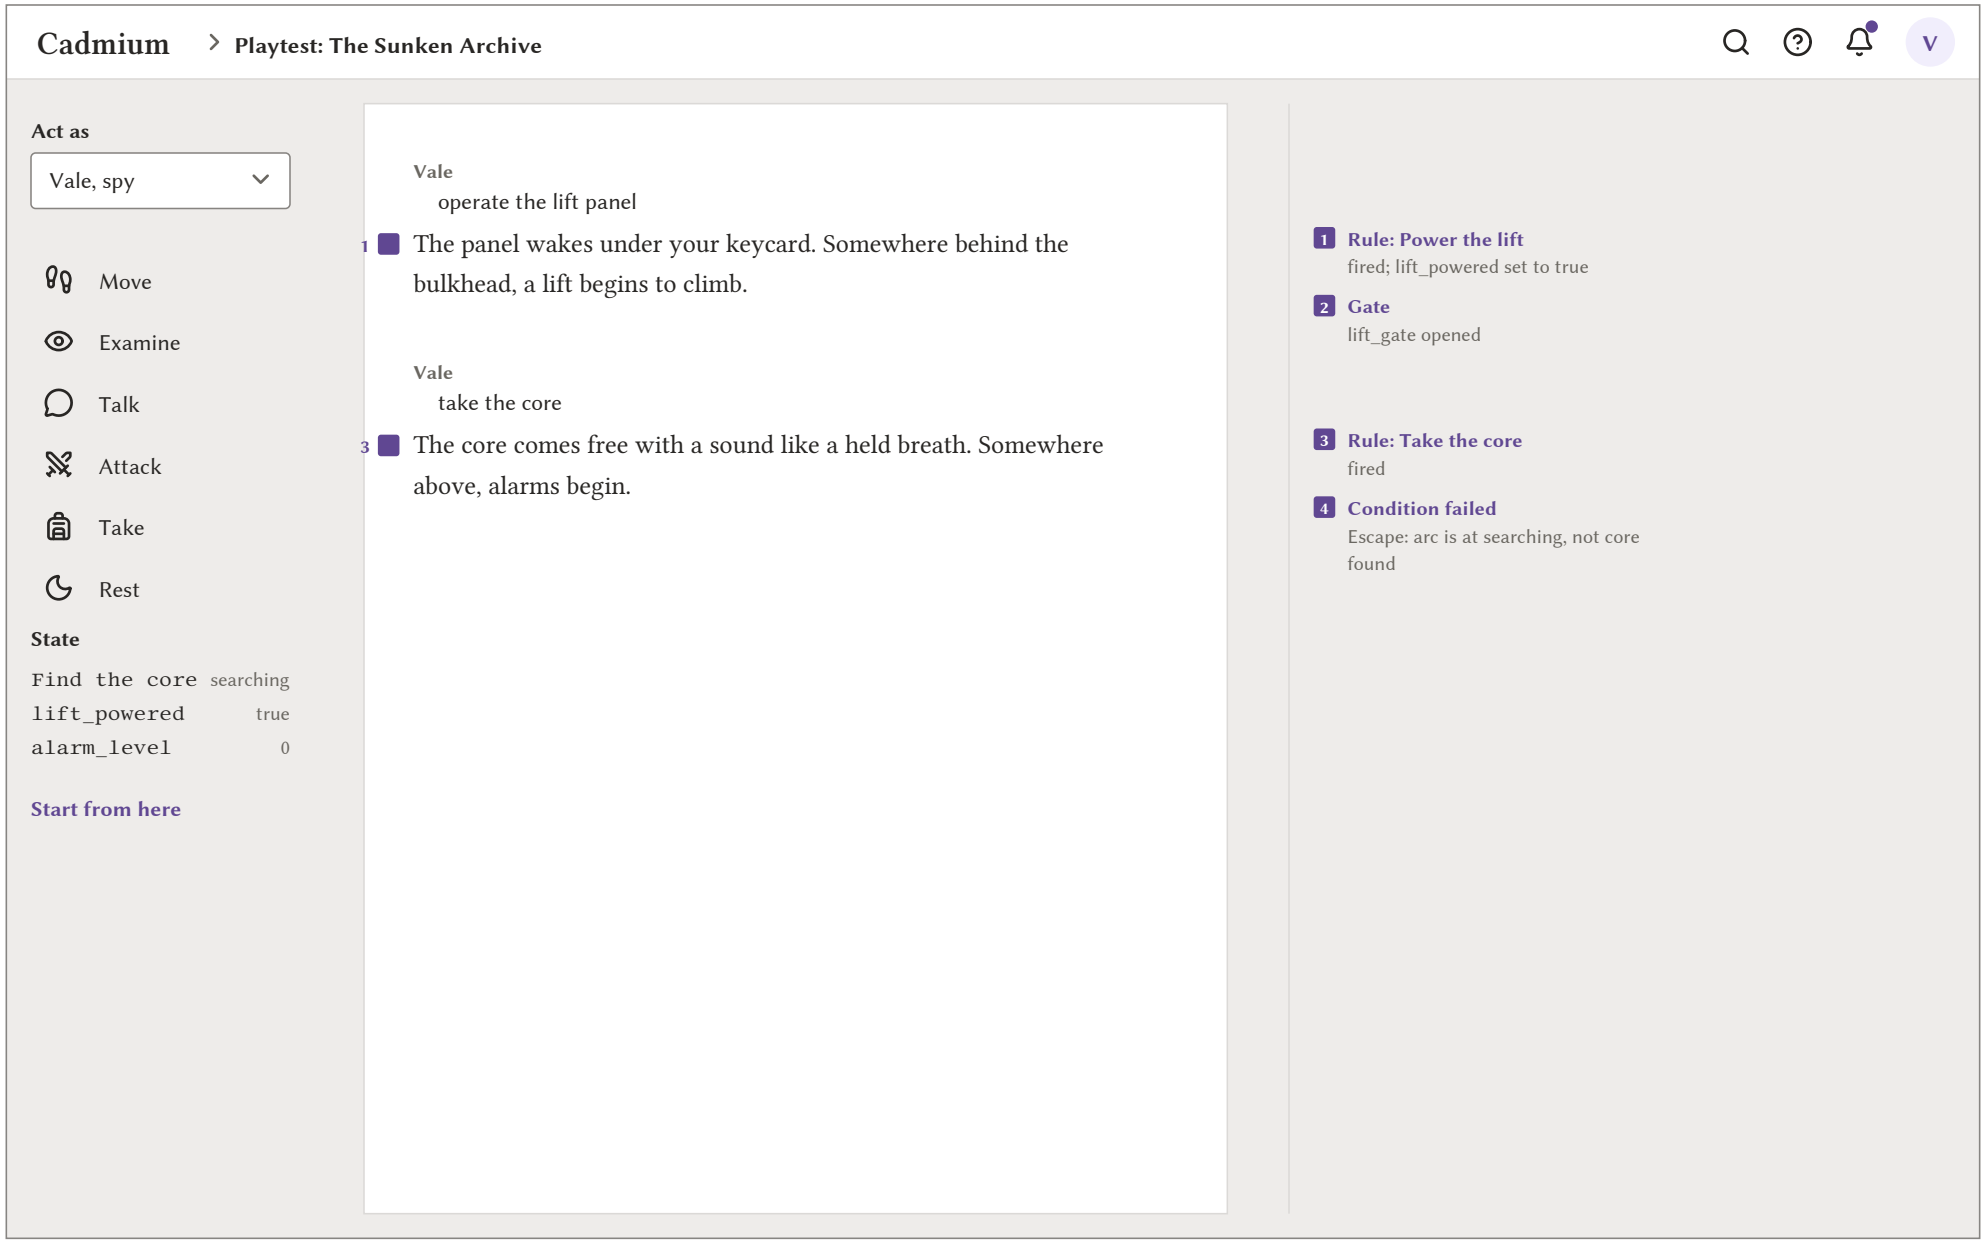

Adventure editor: Items and creatures

Adventure-specific entities. Statistics come from the rules system's form; the author picks a content icon.

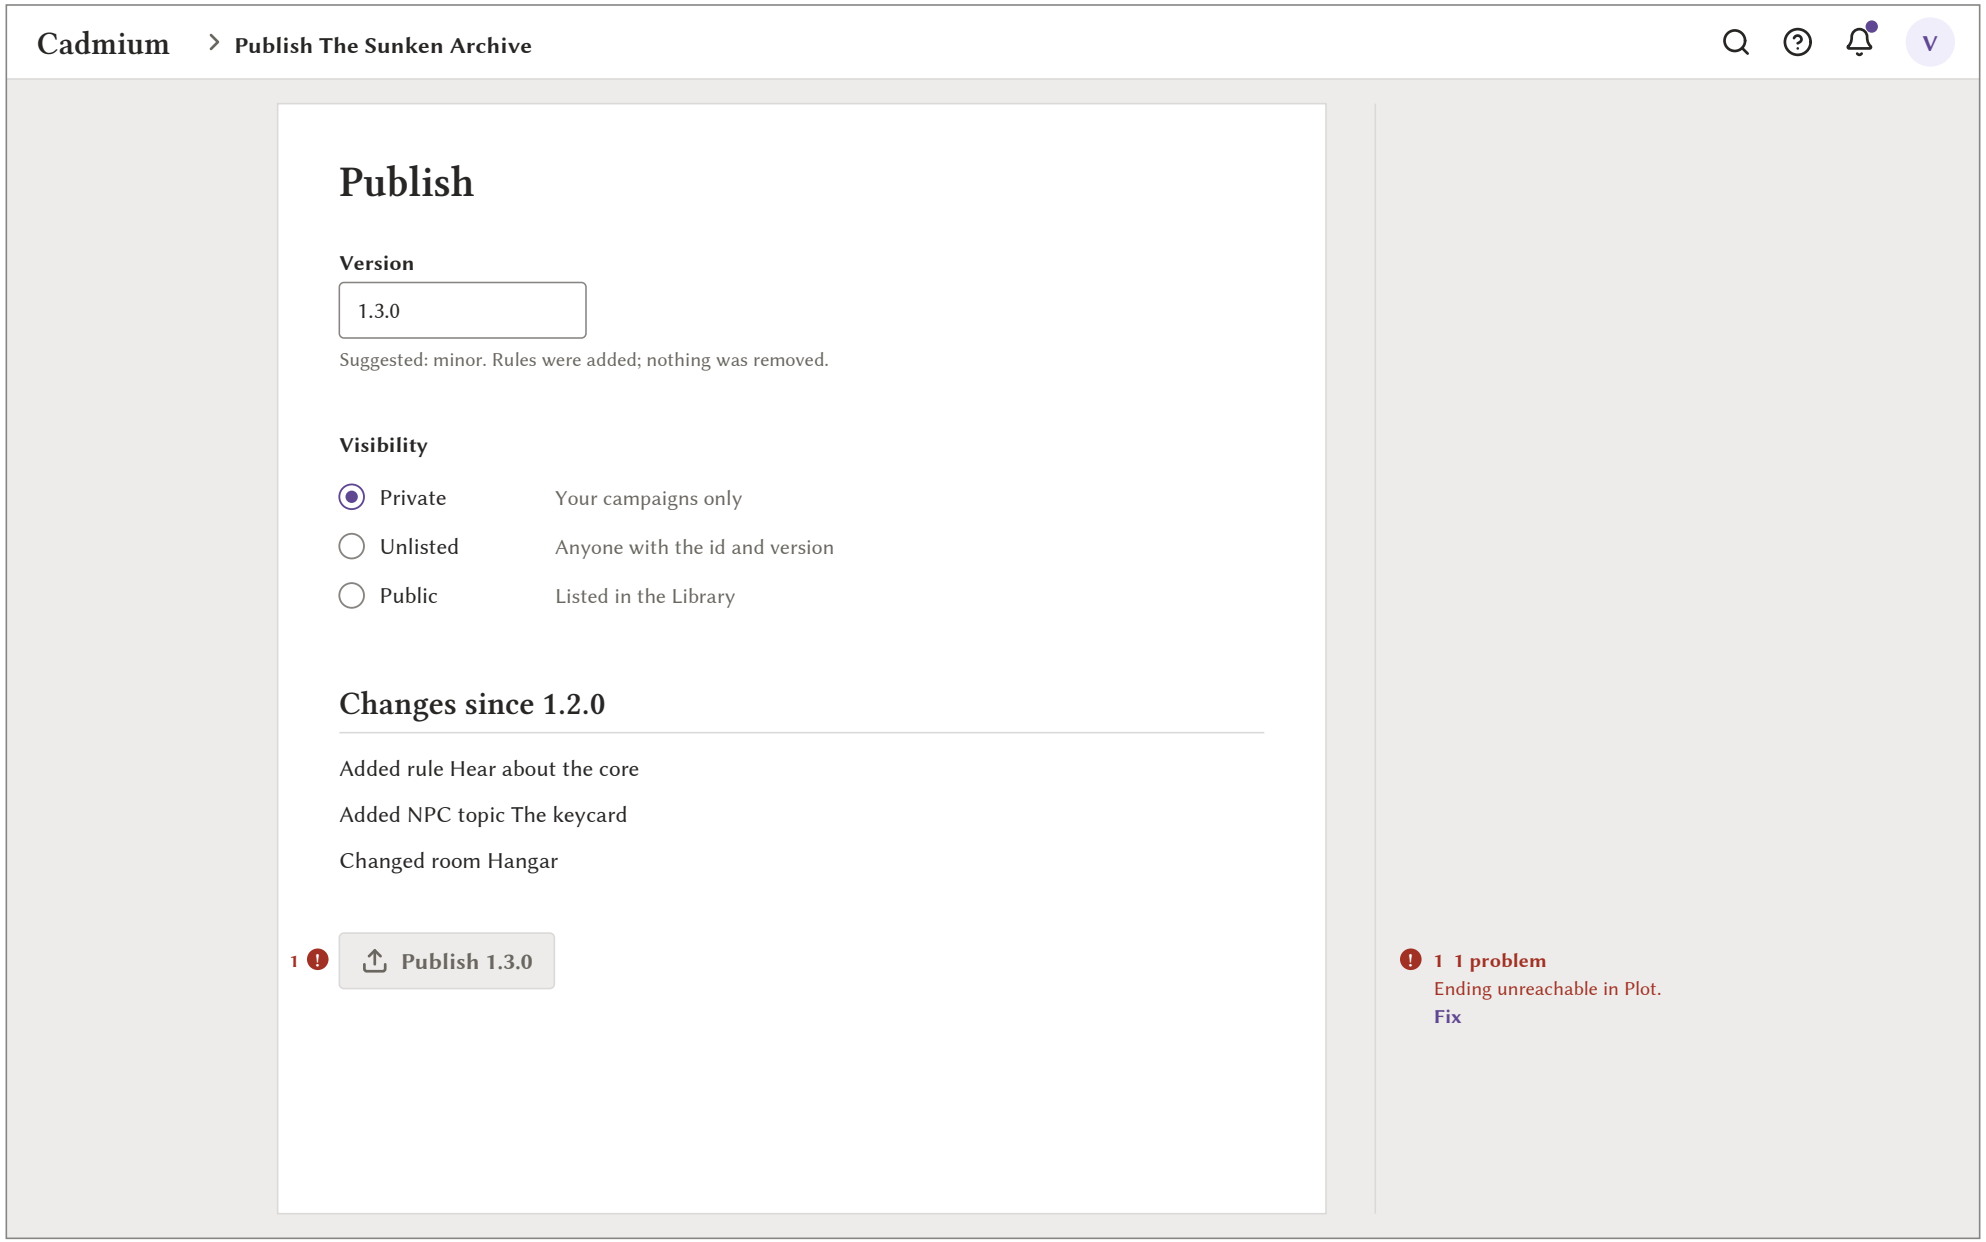

Adventure editor: Playtest

The engine runs in the browser. The desk holds the event palette and state; the page is the log; the margin is the trace.

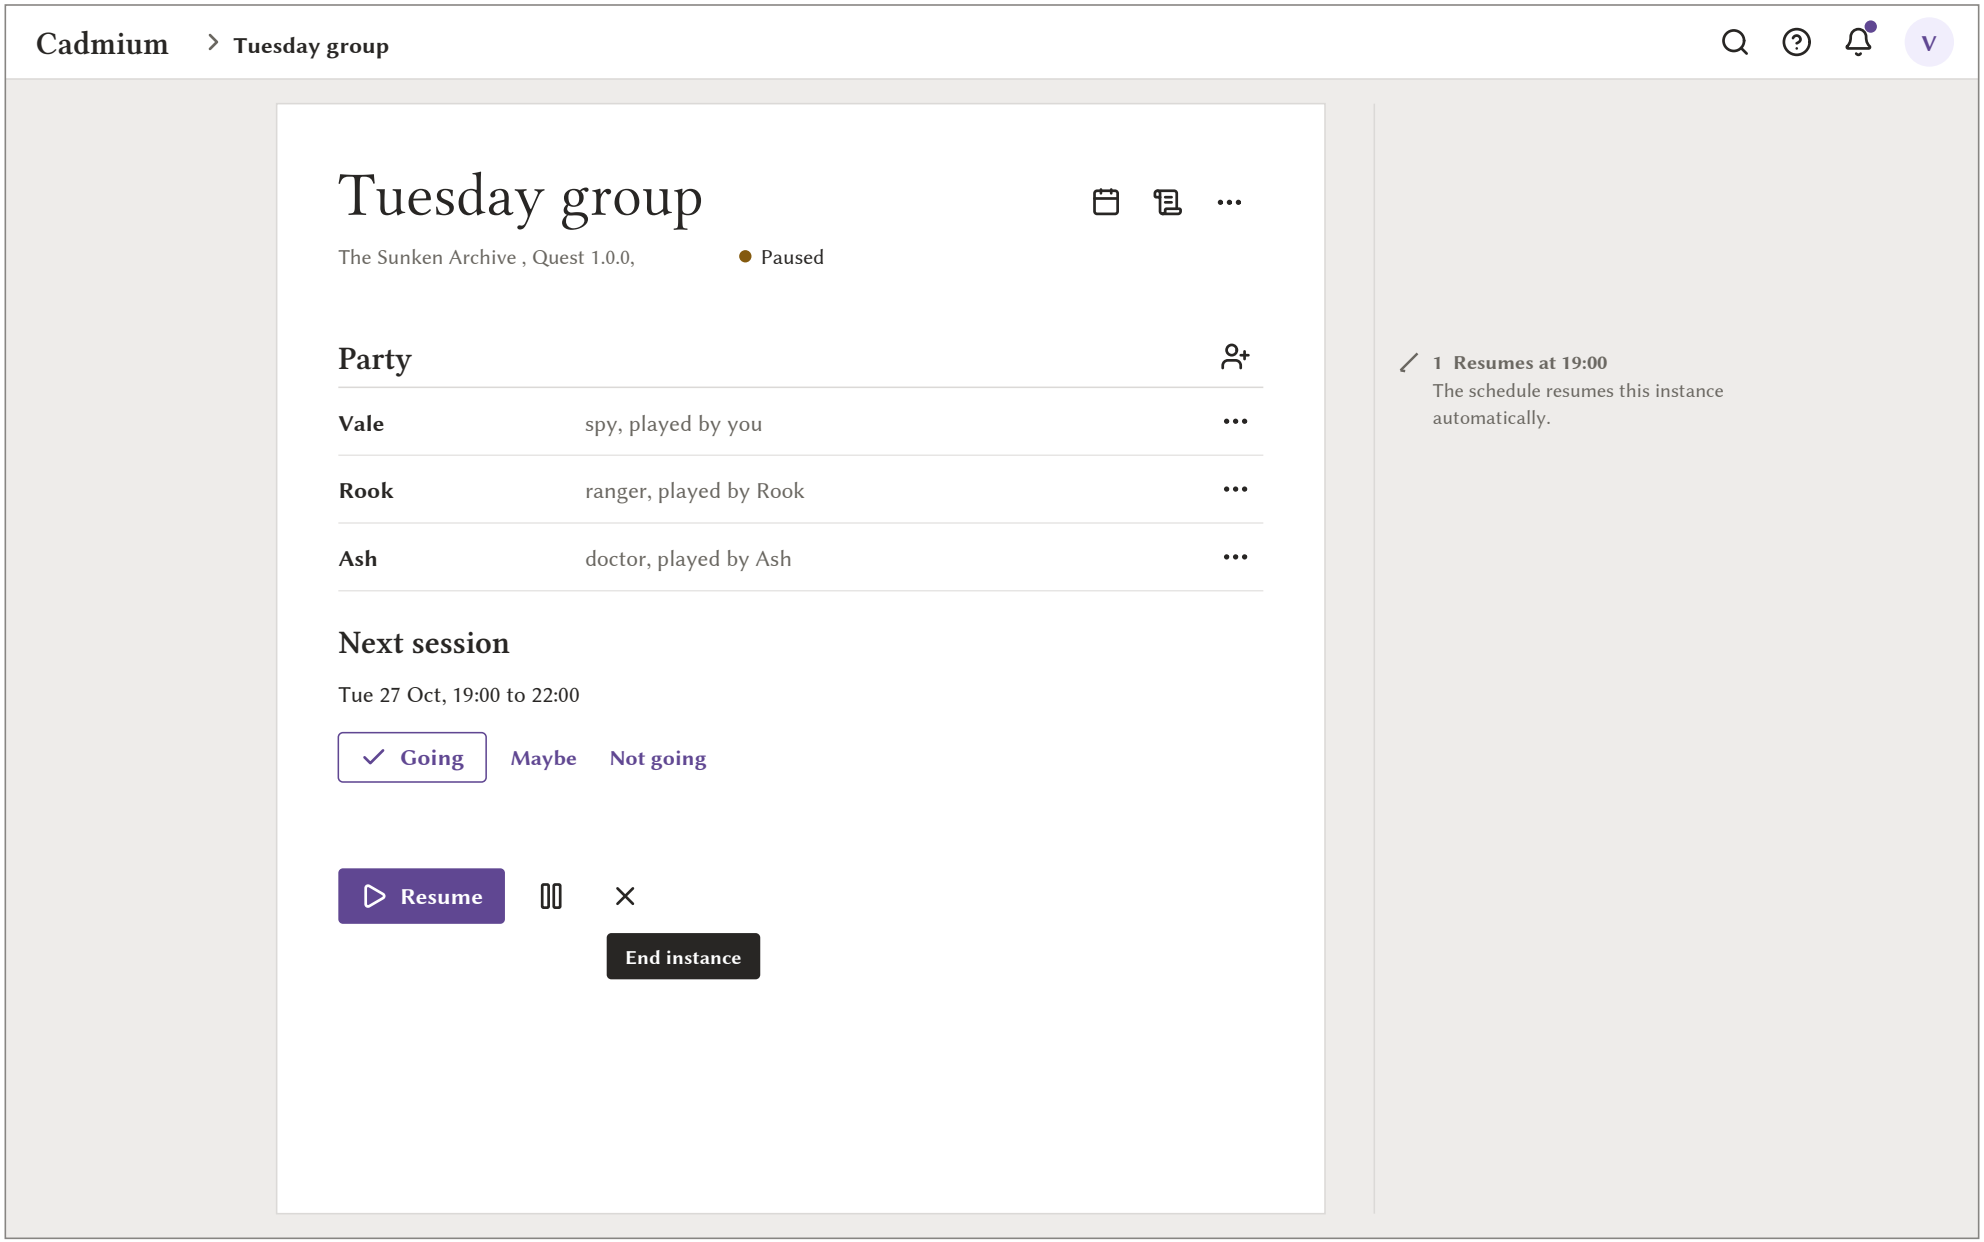

Publish

Version and visibility. Publishing is blocked while any error remains; the page suggests the version increment.

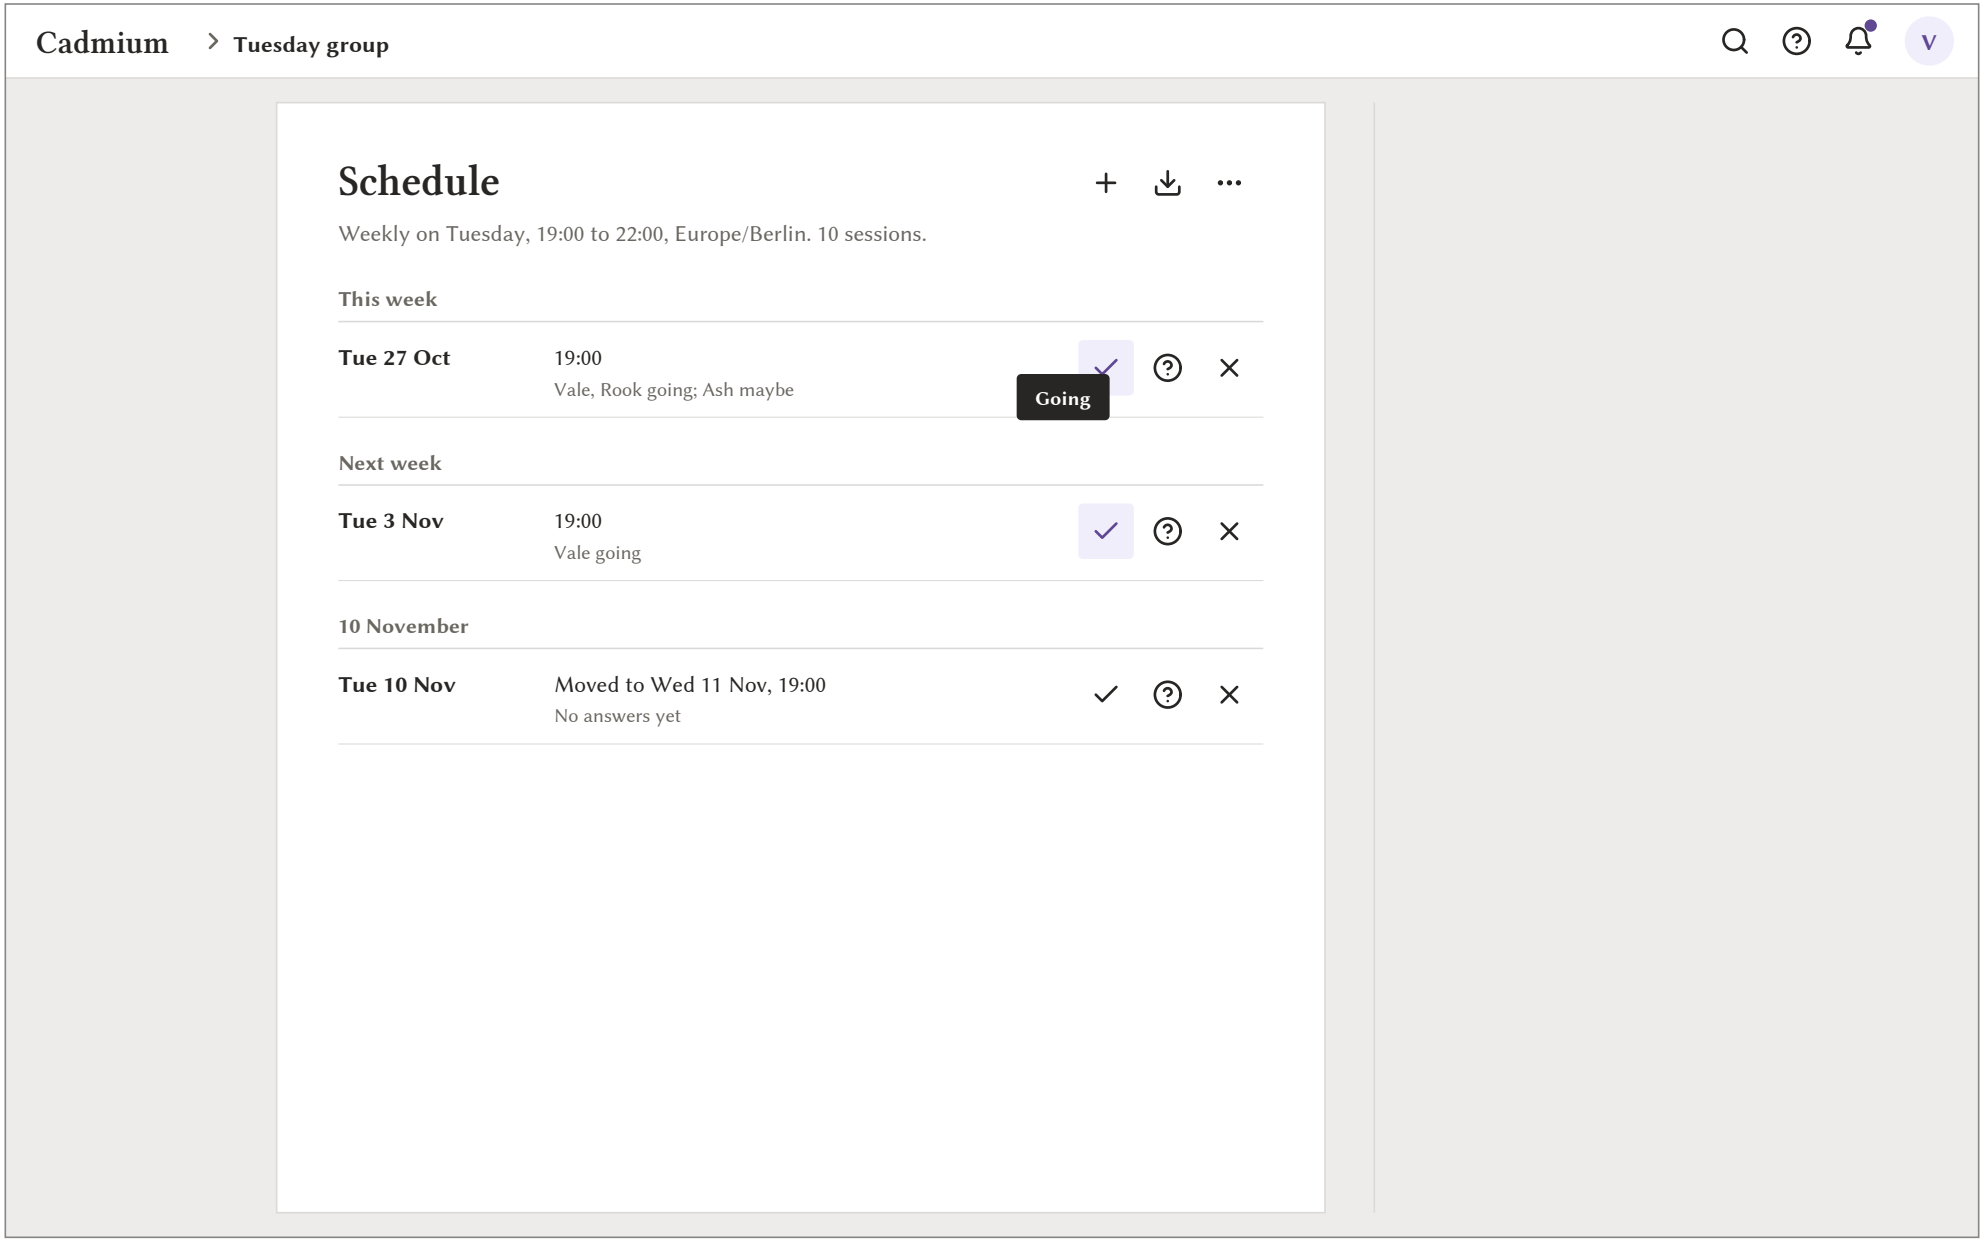

Instance lobby

Before and between sessions: party, next session, and the author's controls.

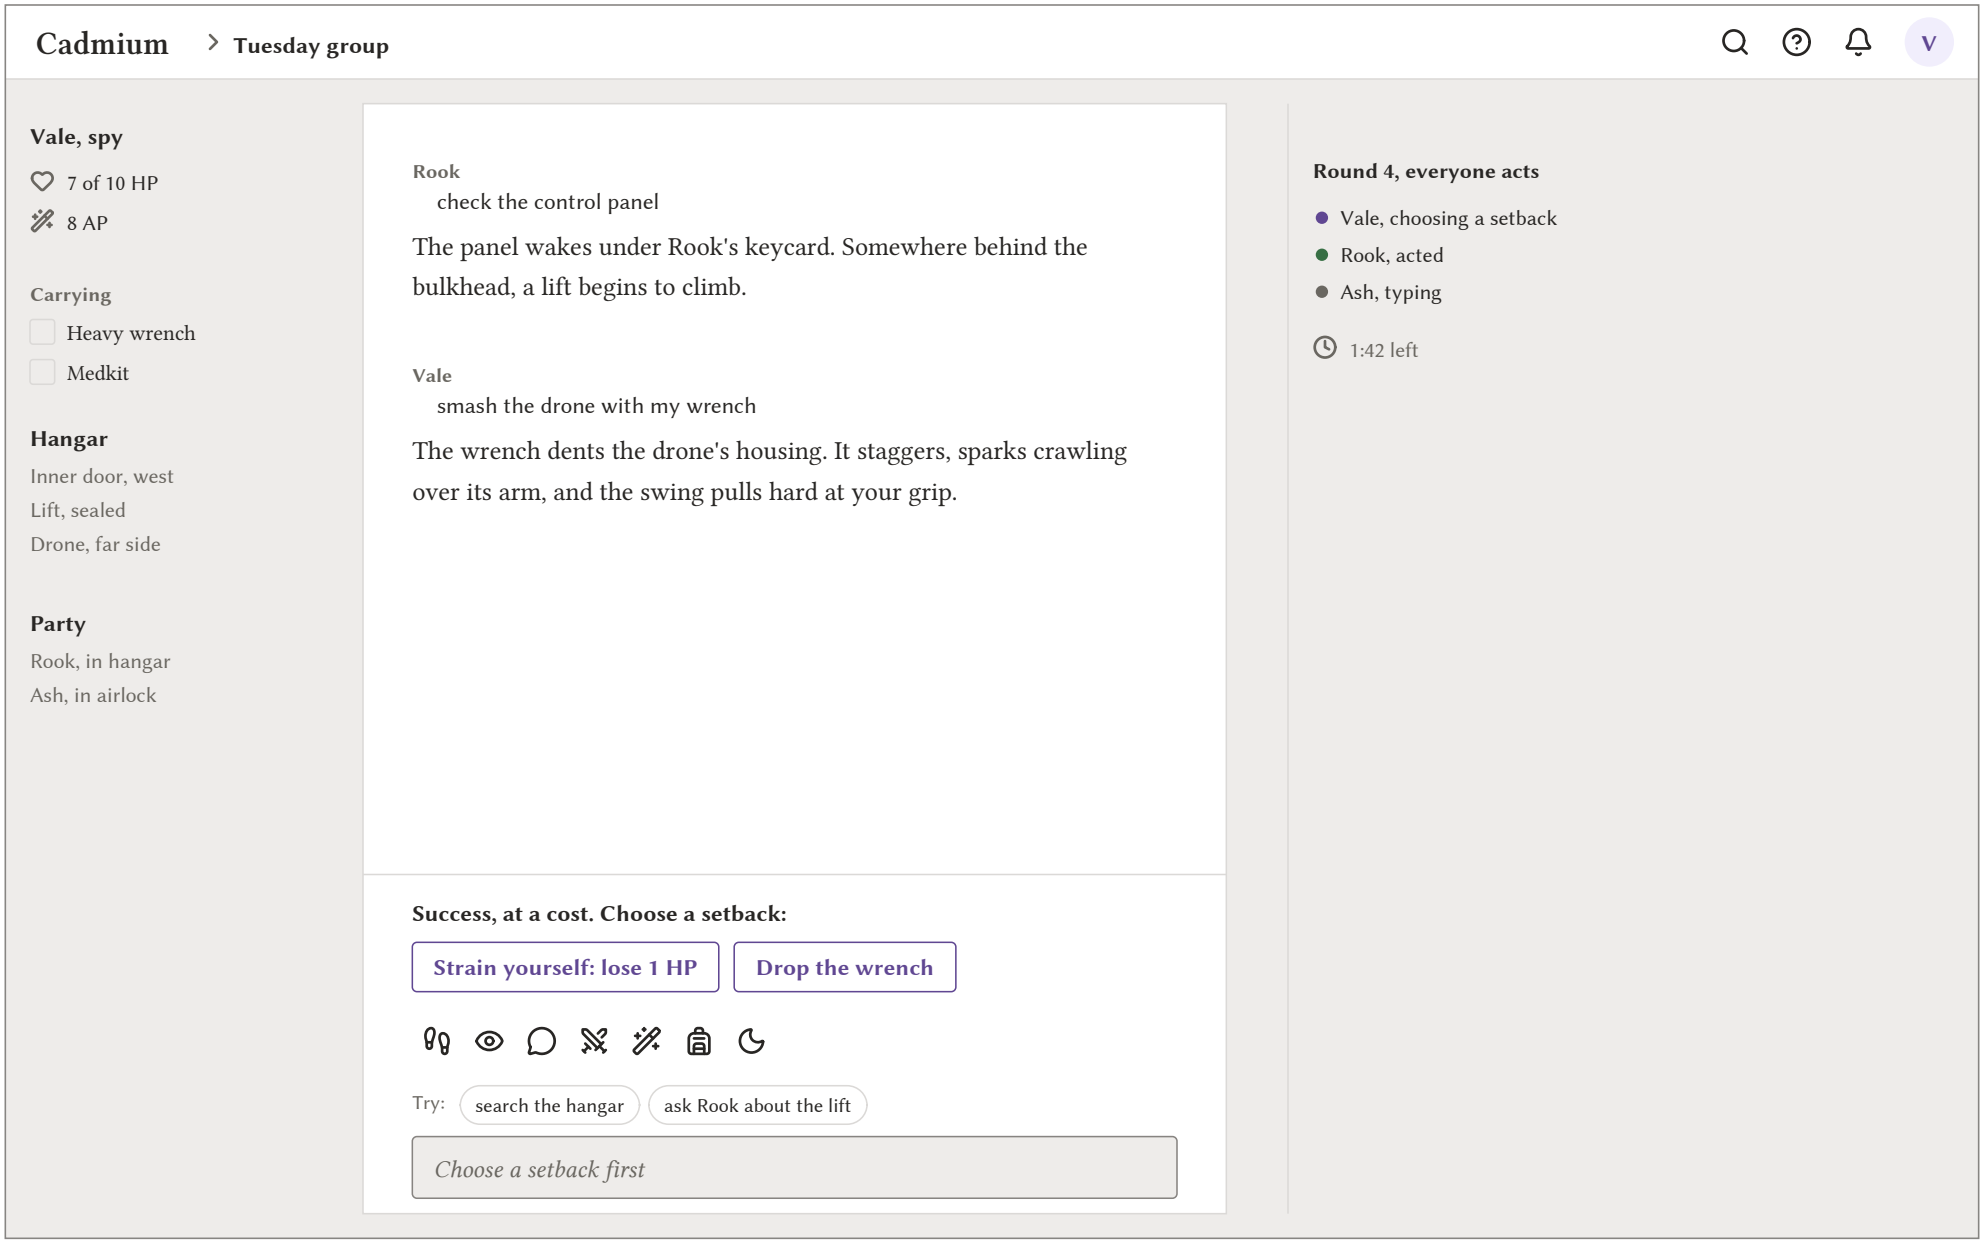

Schedule

Occurrences grouped by week in the user's time zone, with RSVPs. The author edits the series.

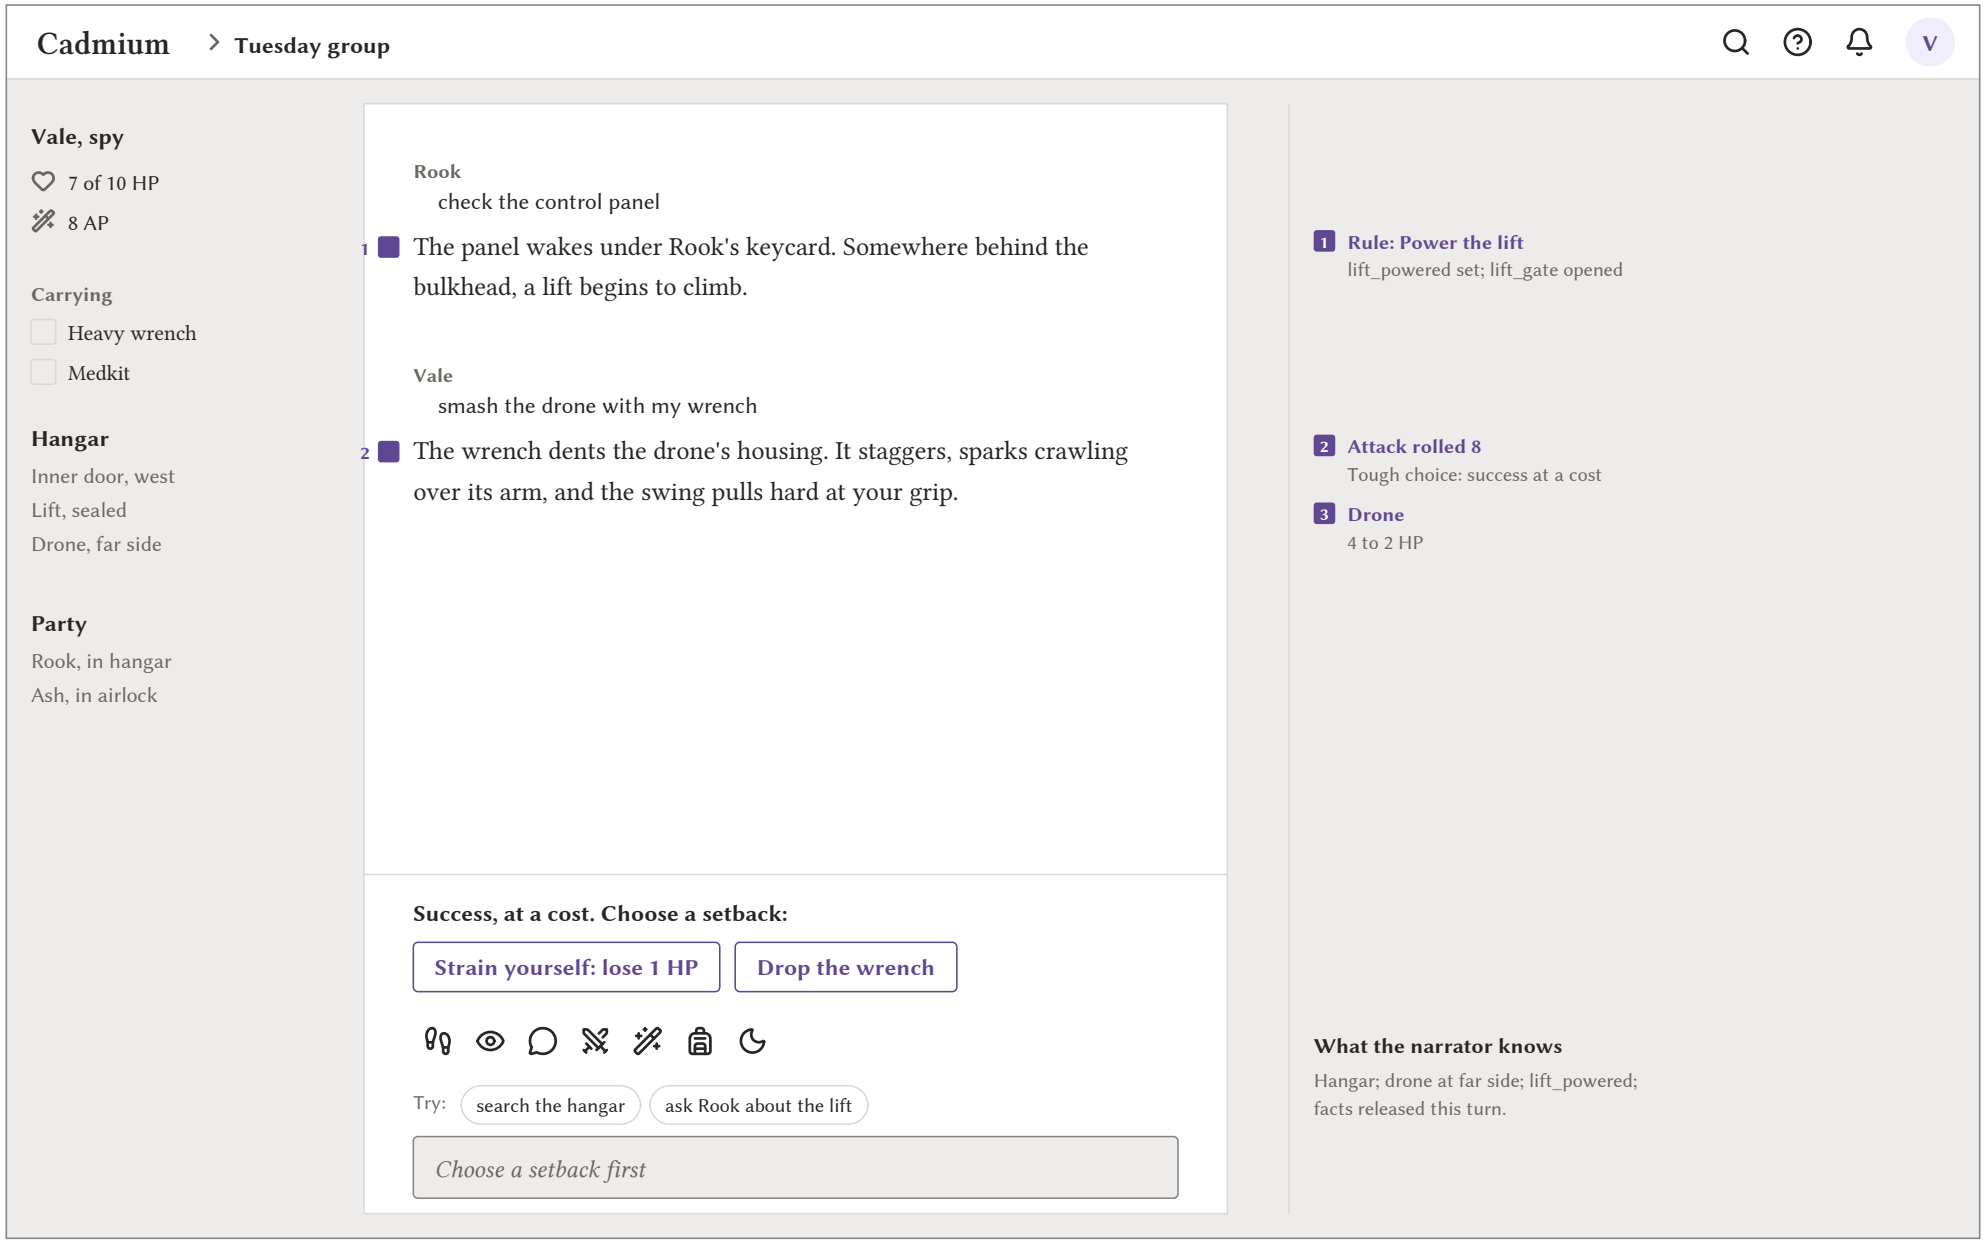

Play

The log is the page: player actions under names, narration below. The desk holds character, room, and party; the margin holds round status.

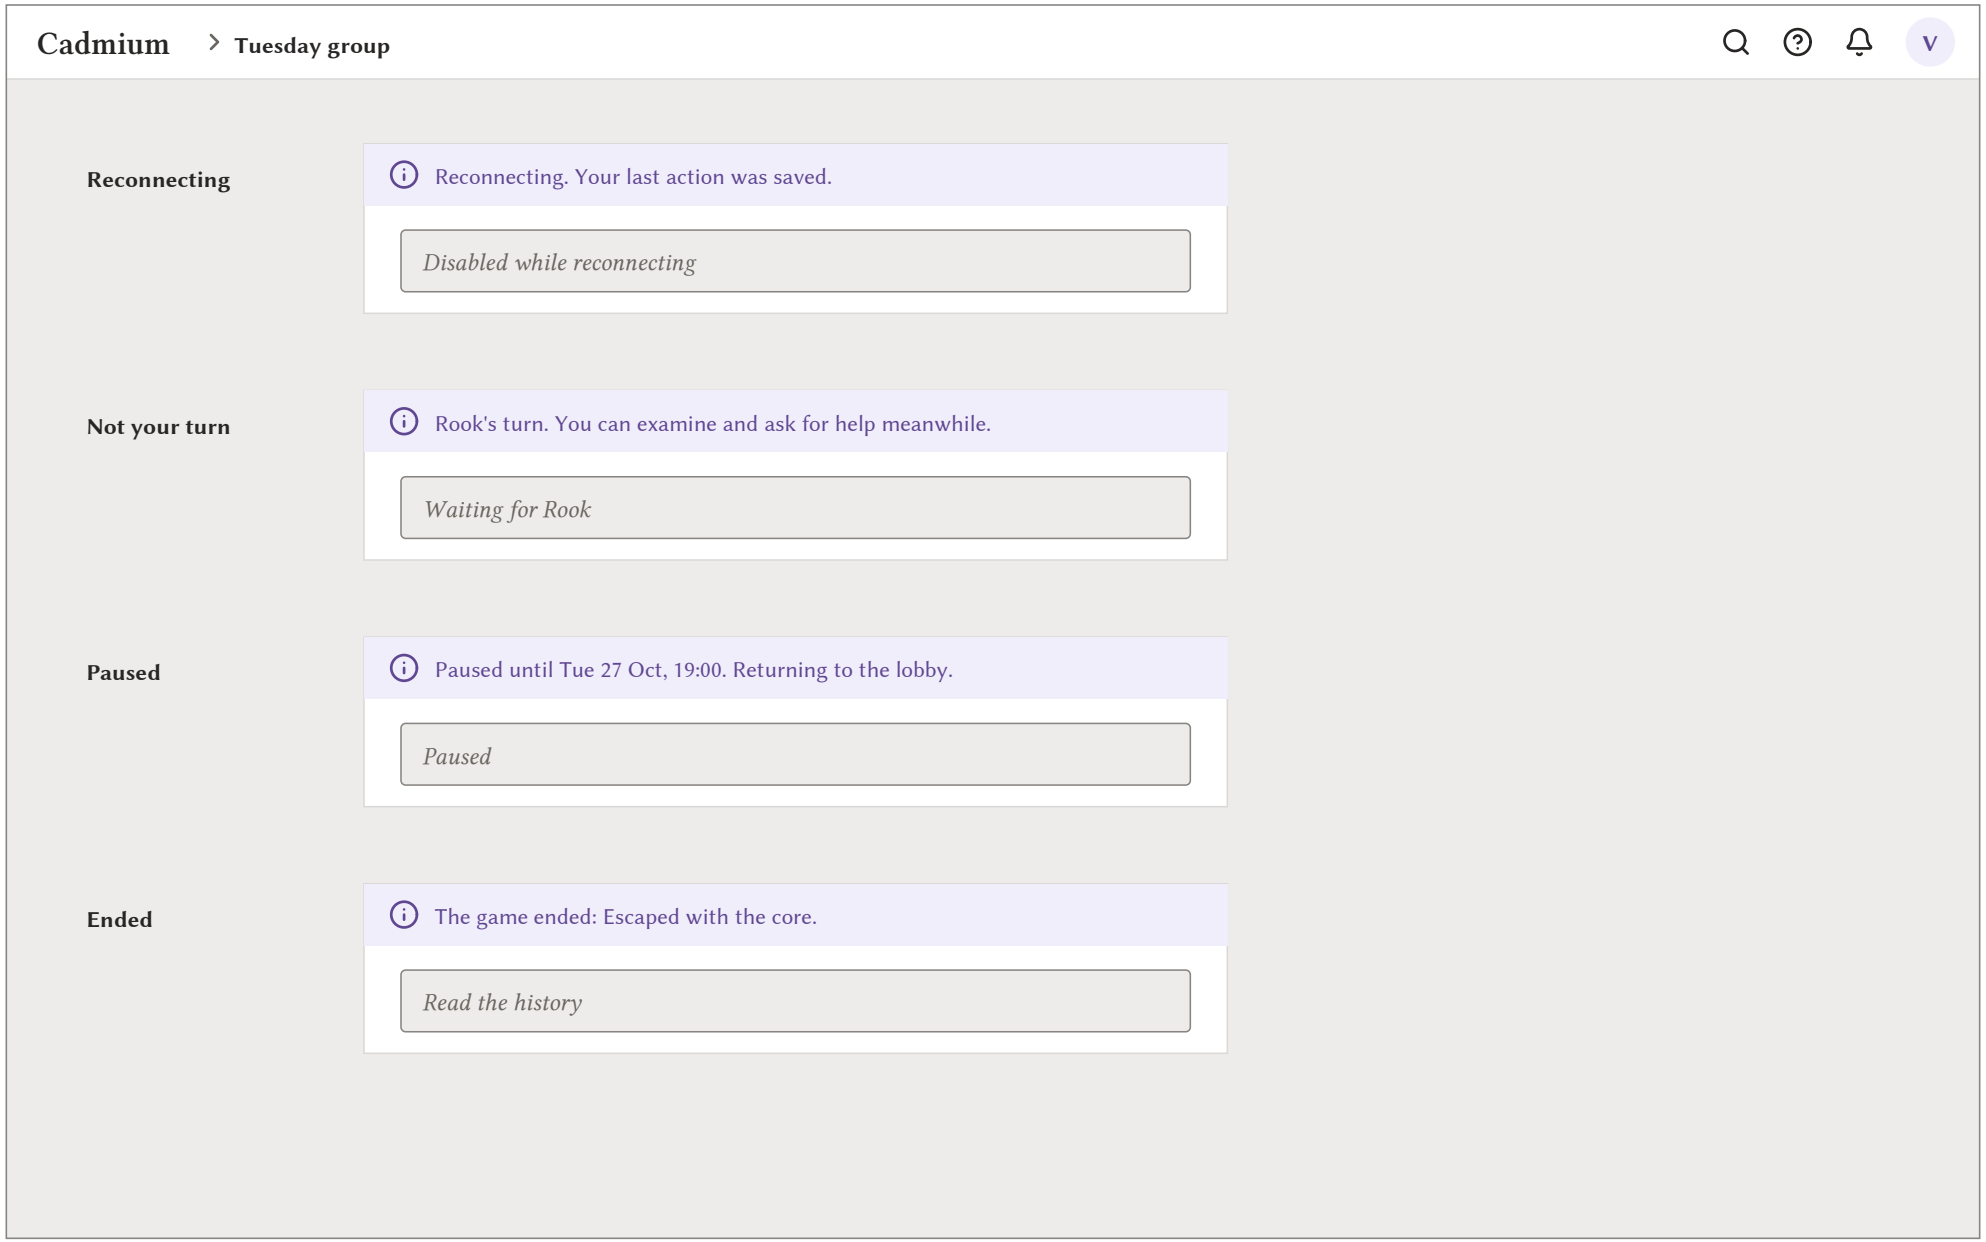

Play, author view

The author and playtest view adds the narrator's trace in the margin: rolls, rules, and state changes beside each narration.

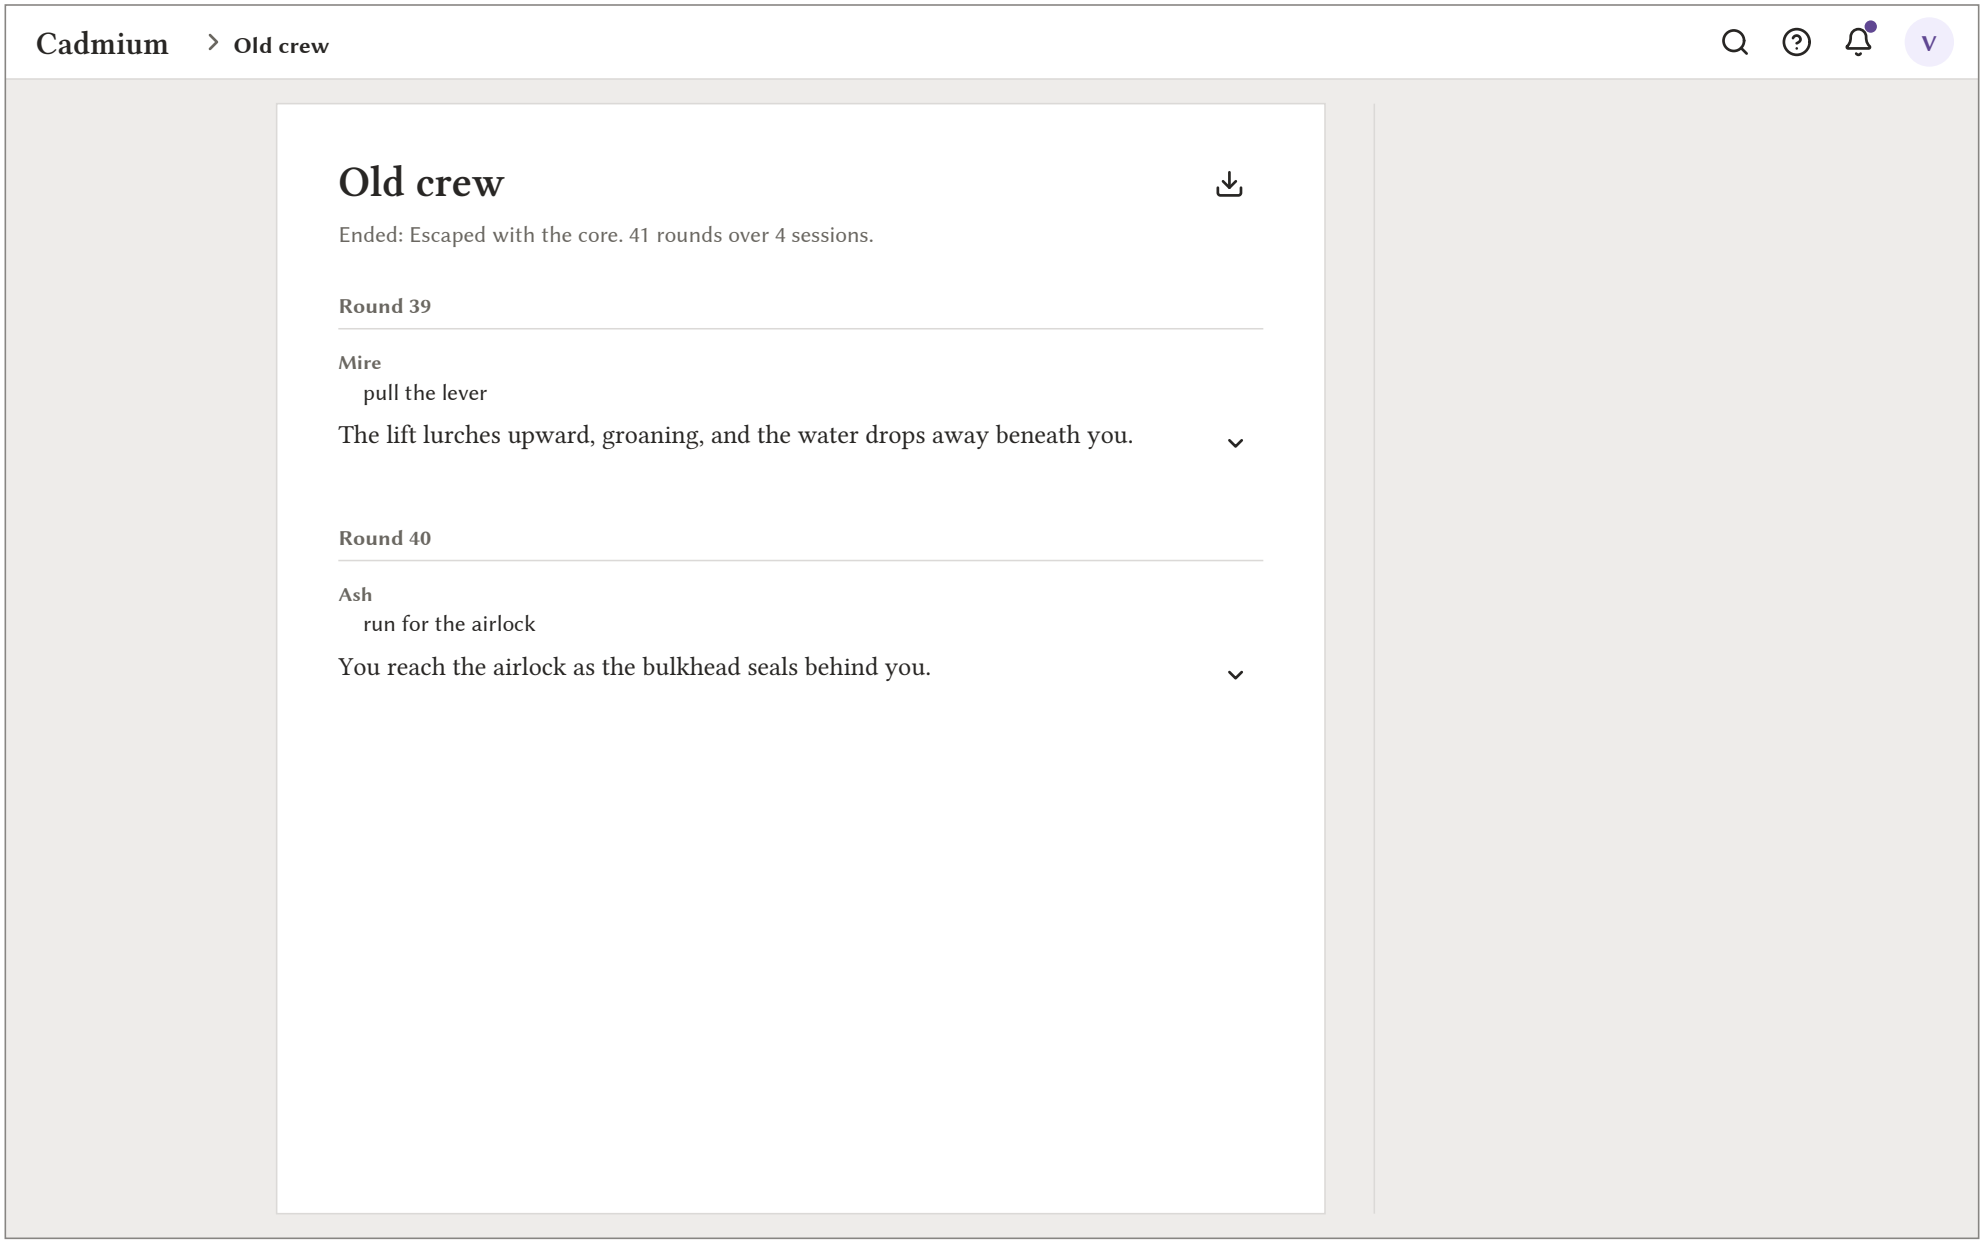

Play: states

Connection and turn states shown in the input area and as a banner over the log.

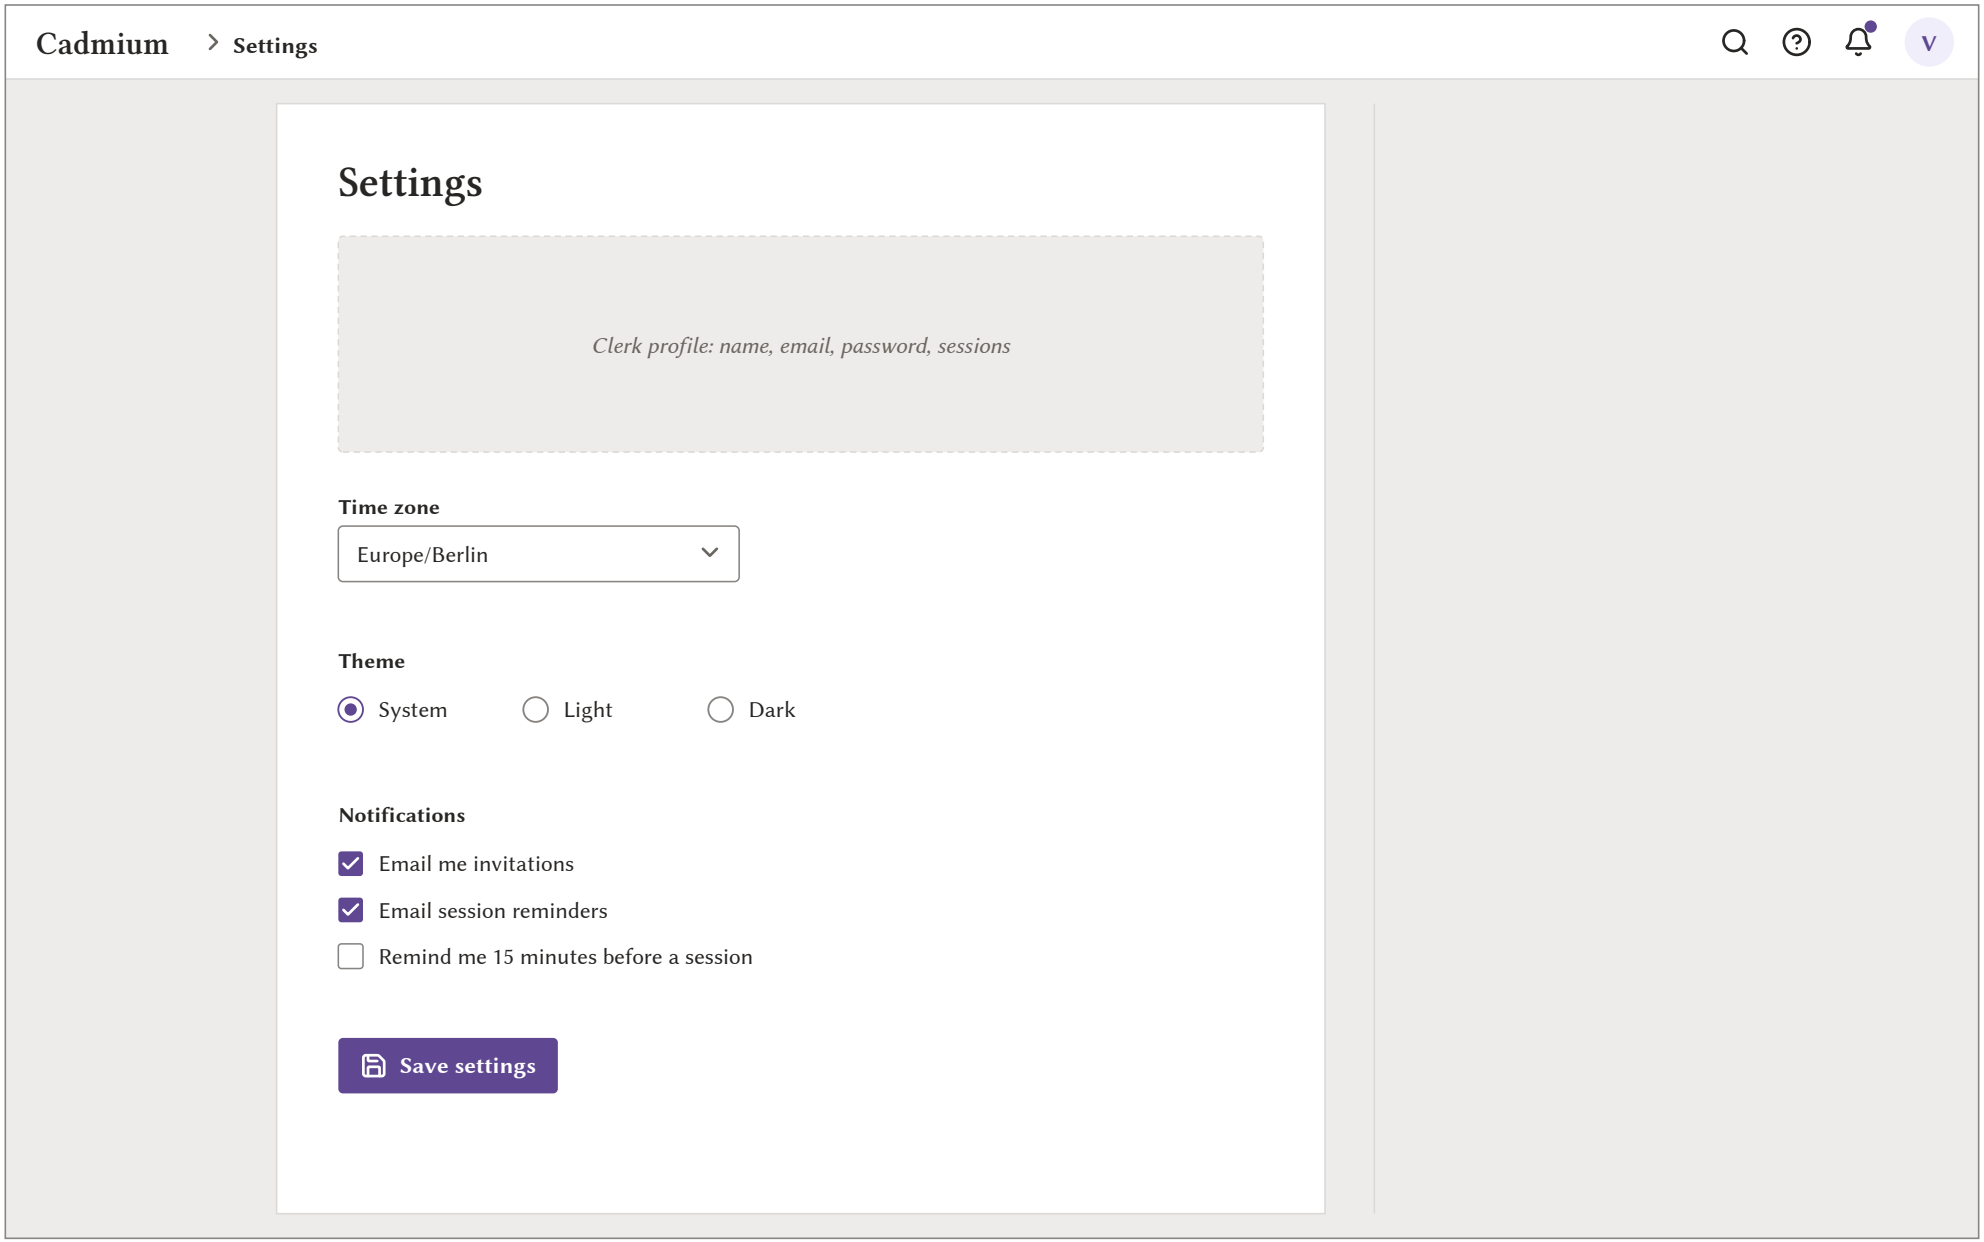

History

Read-only log by round. Ended instances open here; events expand under each commit.

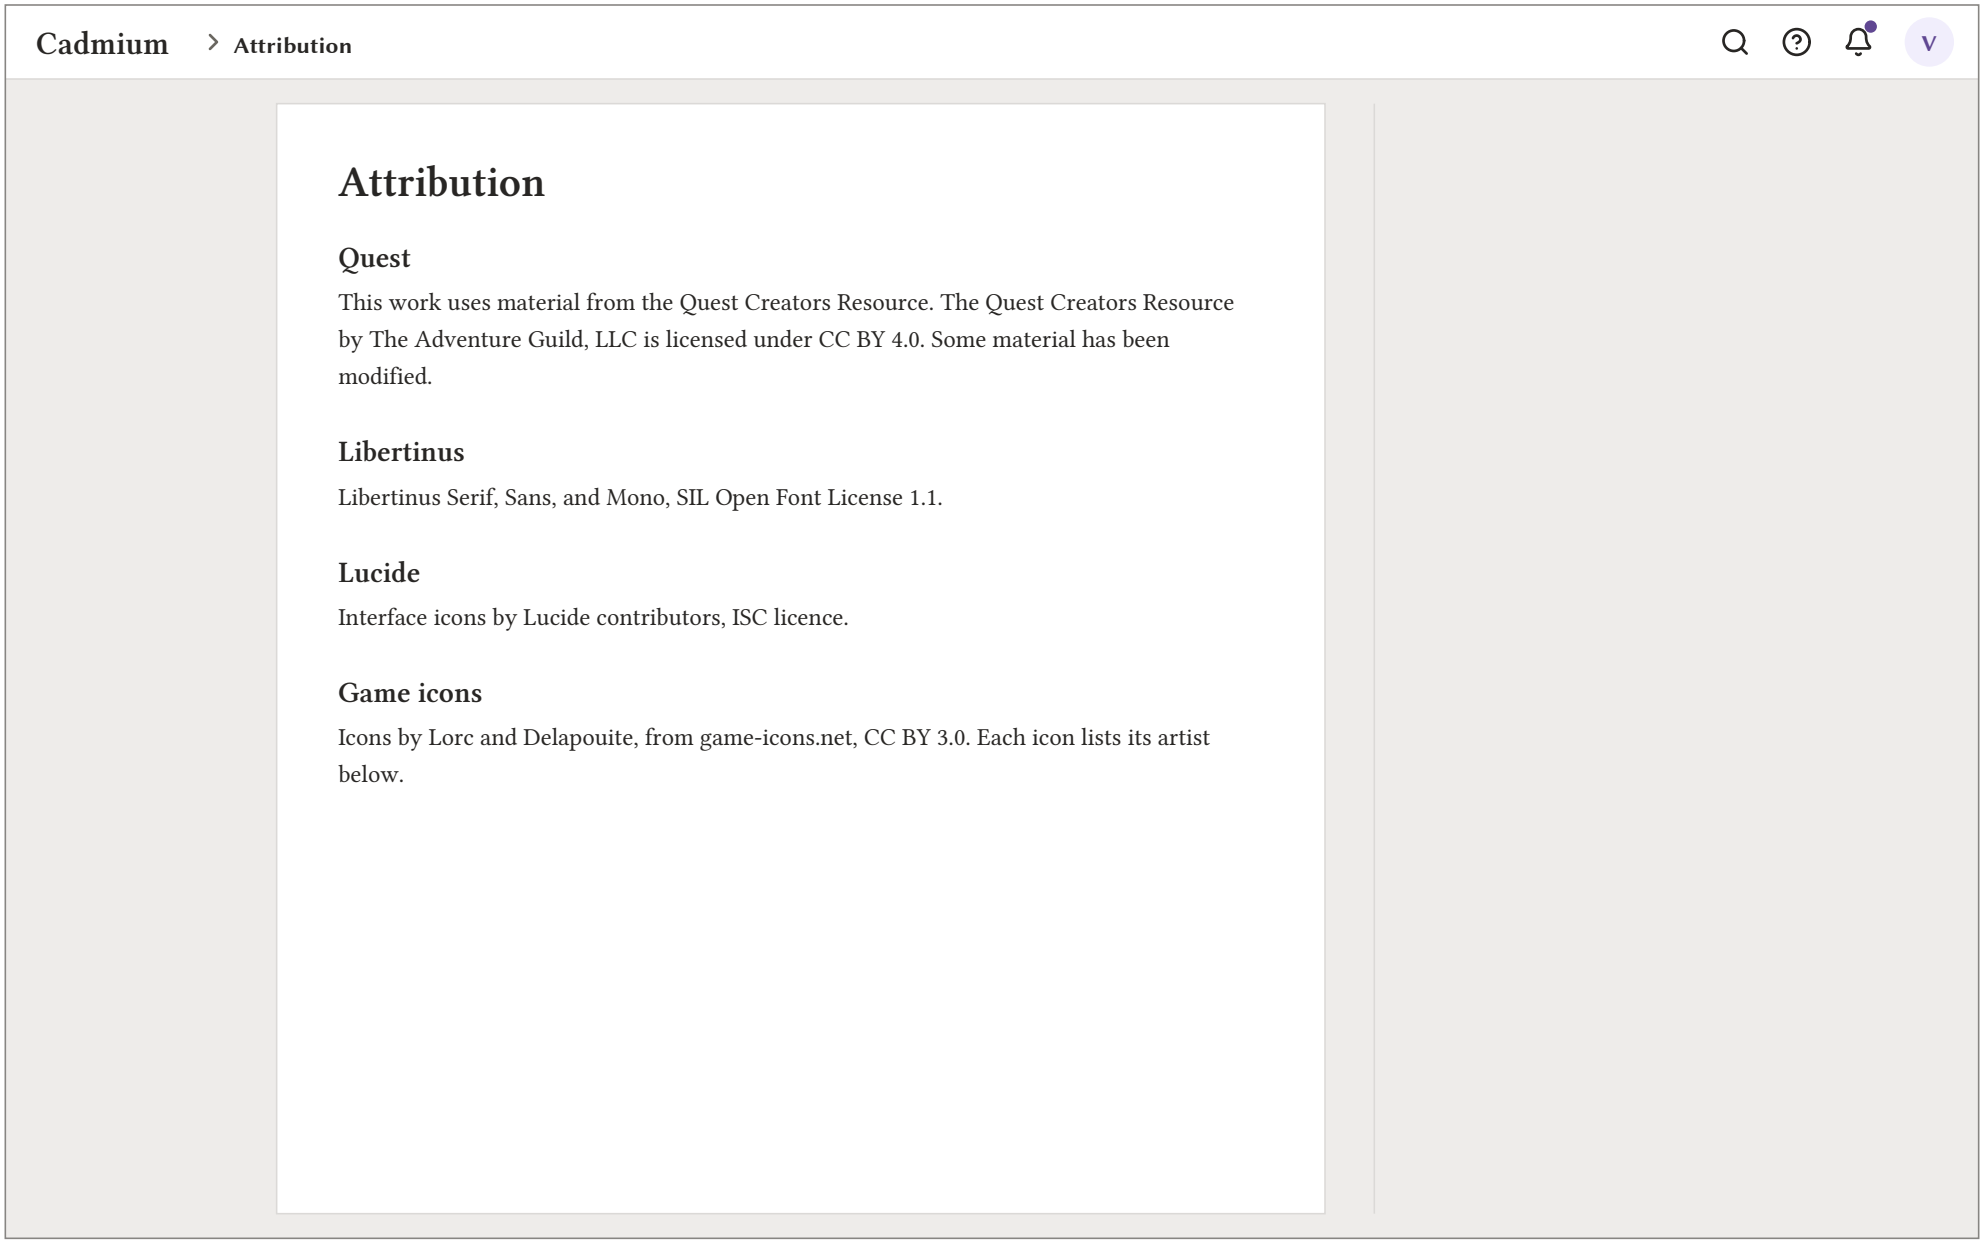

Settings

Clerk's profile component for account details, then Cadmium's own preferences.

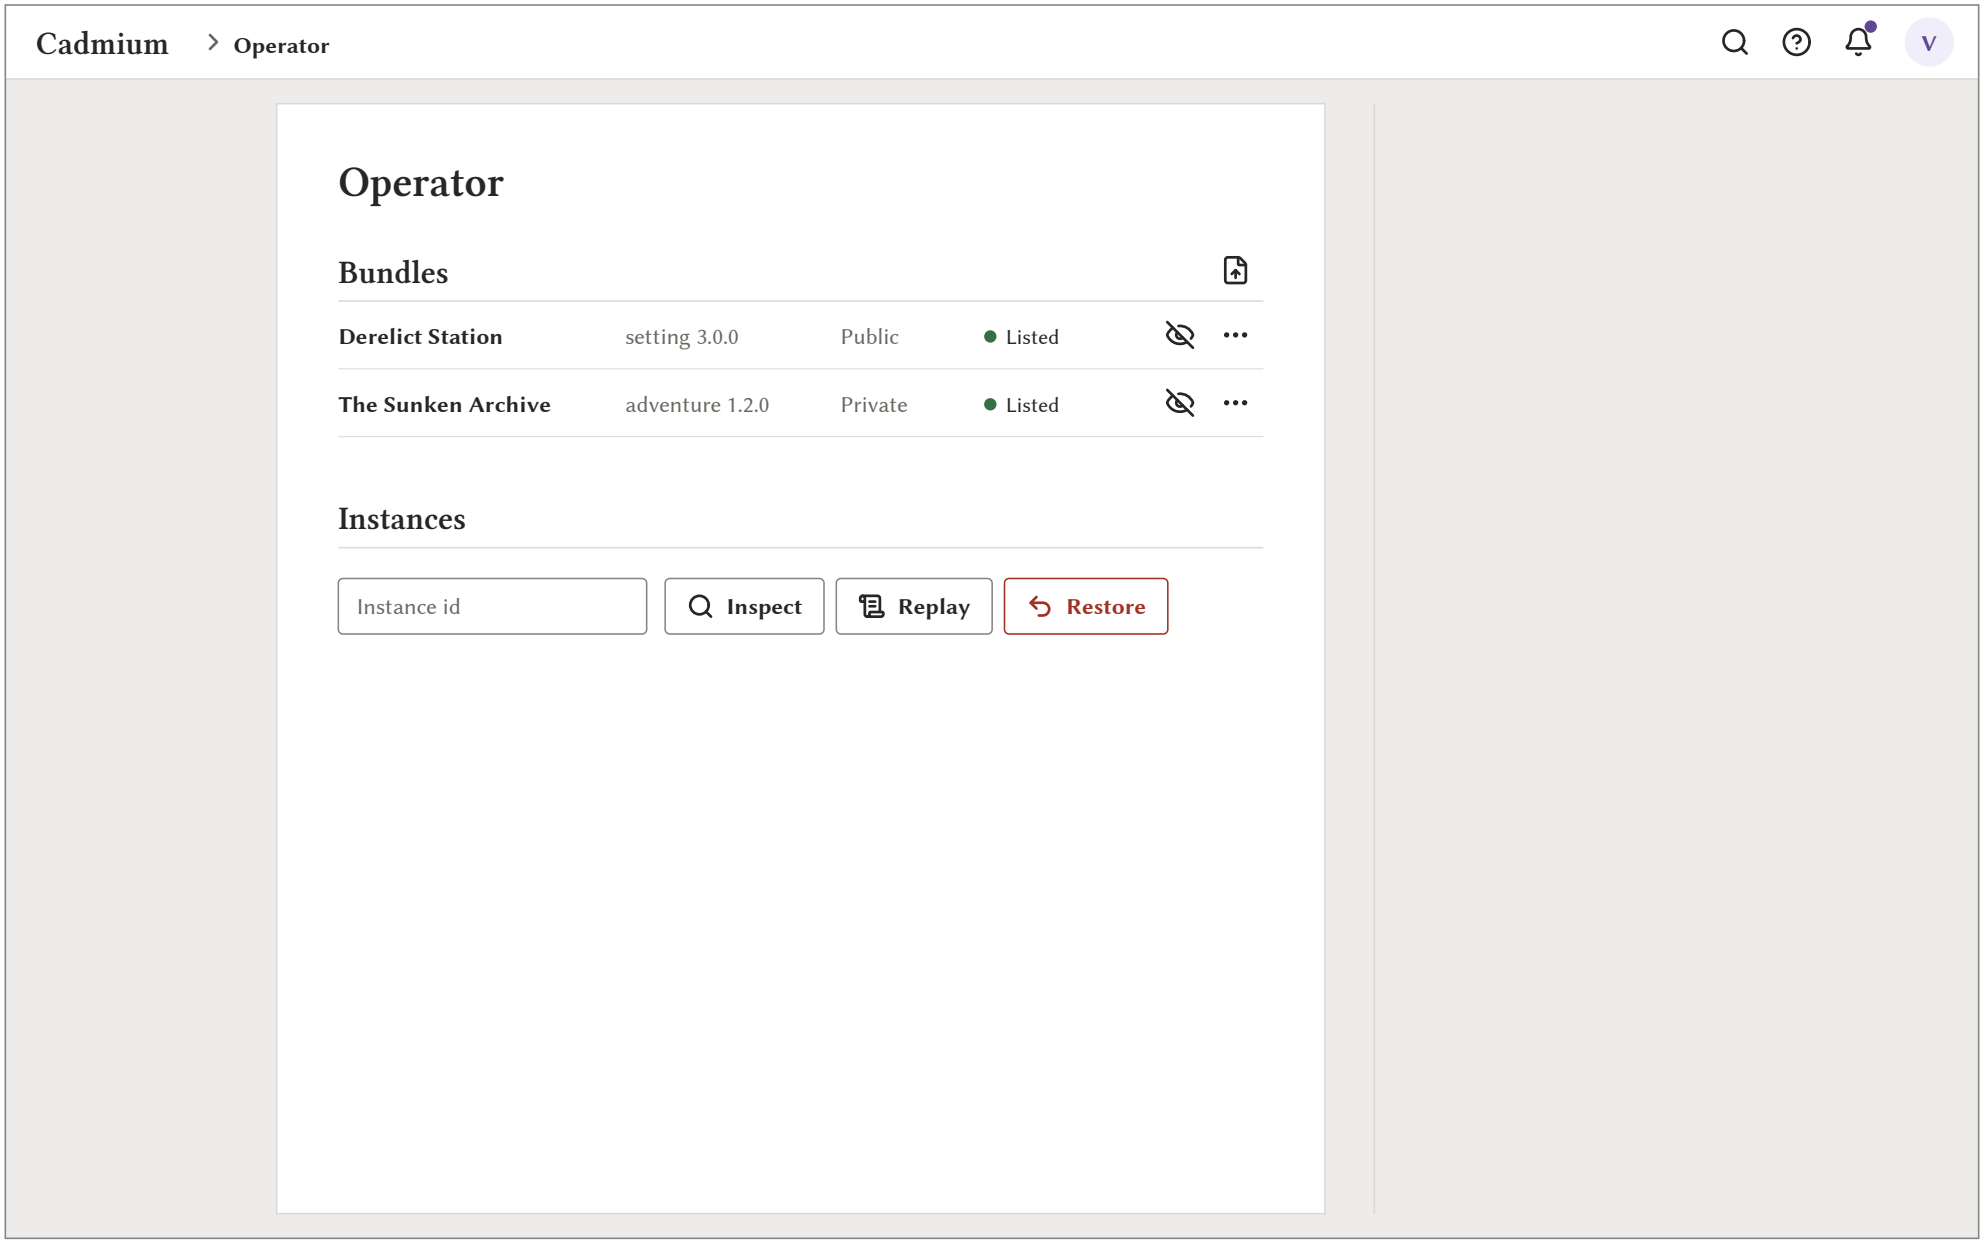

Attribution

Public. Every licence and credit the product carries, generated from LICENSES.md.

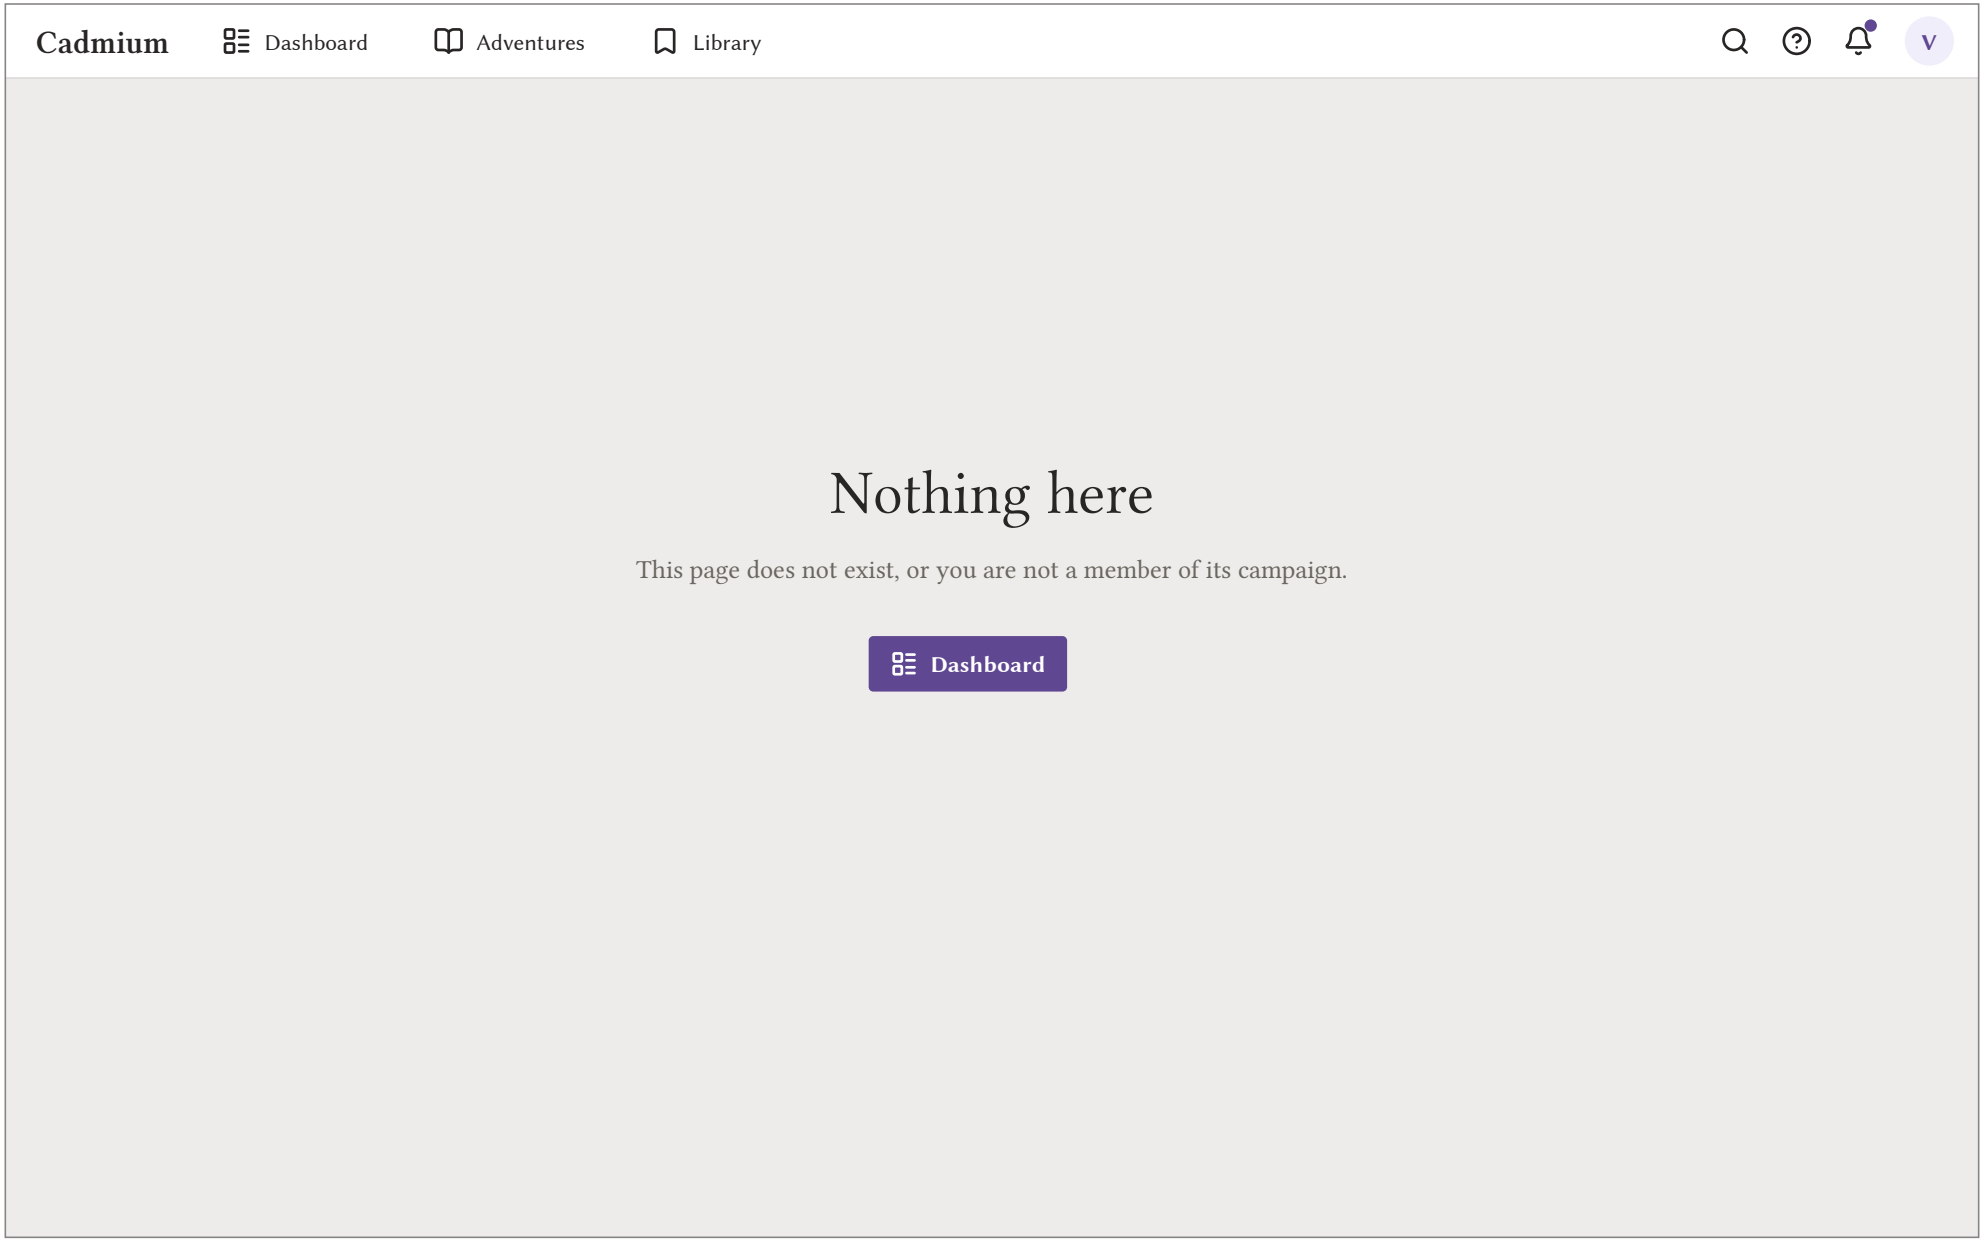

Operator console

Operators only. Publish setting packs, moderate listings, and inspect, replay, or restore instances.

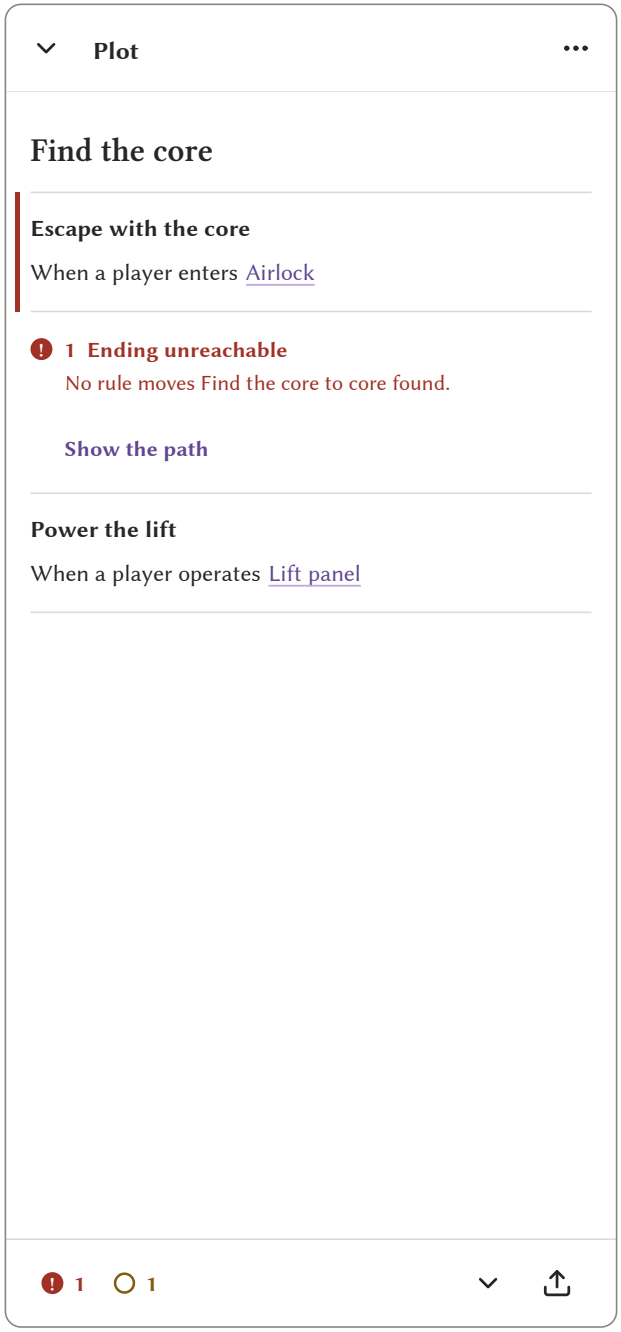

Not found

Shown for missing records and for records the user may not see.

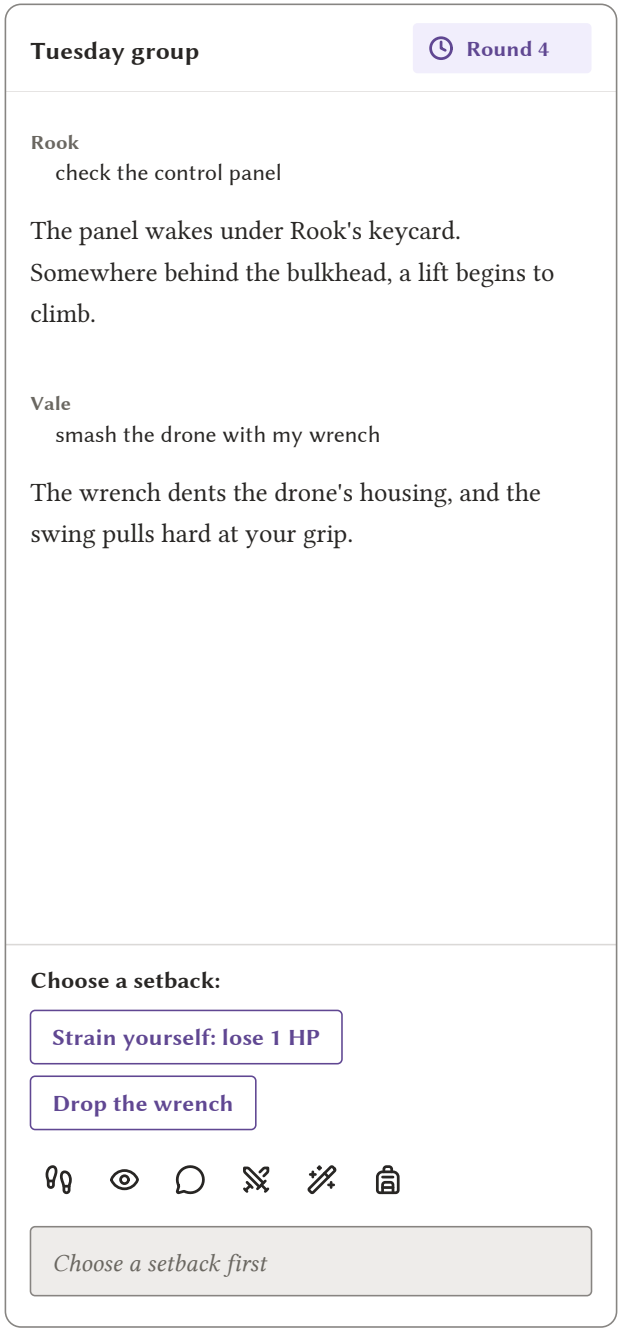

Phone: adventure editor

Below 1024 px the page fills the width. Notes render under their line; the bar at the foot counts notes and steps between them.

Phone: play

The log and input fill the screen. Round status, the party, and the character move behind the Round button.

Adventure editor at night

Dark mode: the same layout with the dark tokens. Lighter page on a darker desk; lavender accent.
