Icons

Openly licensed icon sets for an interface that prefers icon buttons. Each set is drawn with the product's own vocabulary of 36 actions and things, in Libertinus and Graphite.

Policy

Buttons show an icon. Their name appears on hover and on keyboard focus, and is the button's accessible name. A few buttons keep a visible label; see Icon buttons.

Sets compared

Lucide (ISC), Phosphor (MIT), Tabler (MIT), and Iconoir (MIT) for the interface. Game-icons.net (CC BY 3.0) for adventure content. All are fetched from their GitHub repositories and bundled; none needs a CDN.

Licences

ISC and MIT need the licence text kept with the code, not visible credit. CC BY 3.0 needs credit to each icon's artist on the attribution page.

What decides it

Coverage of the vocabulary, how the stroke sits beside Libertinus at 16 to 20 px, and whether the set has a filled state for toggles.

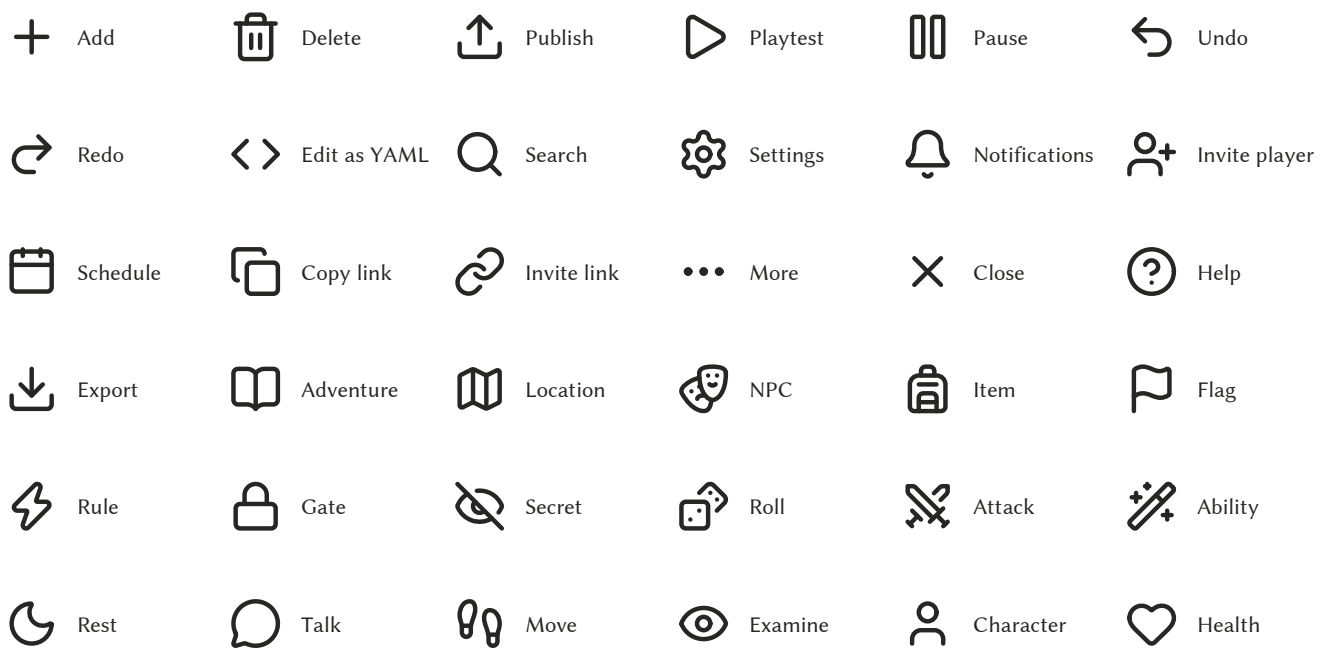

The same six icons in each set

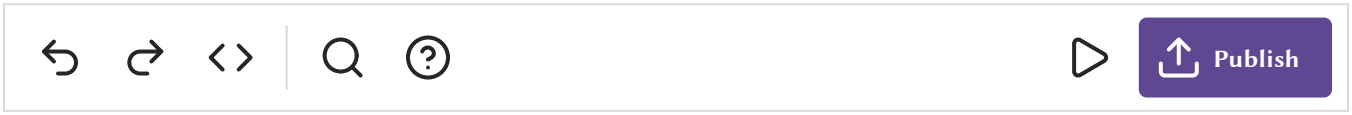

Lucide		ISC
Phosphor		MIT
Tabler		MIT
Iconoir	 none	MIT

Publish, Rule, Attack, Roll, NPC, Ability

Lucide

ISC licence. github.com/lucide-icons/lucide. about 1,600 icons. Outline, 2 px stroke on a 24 px grid, round caps and joins.

Editor bar: icons, with the one primary action labelled.

Play bar: action shortcuts fill the input; the active one is tinted.

Row actions: right-aligned, most frequent nearest the text.

Suits the product

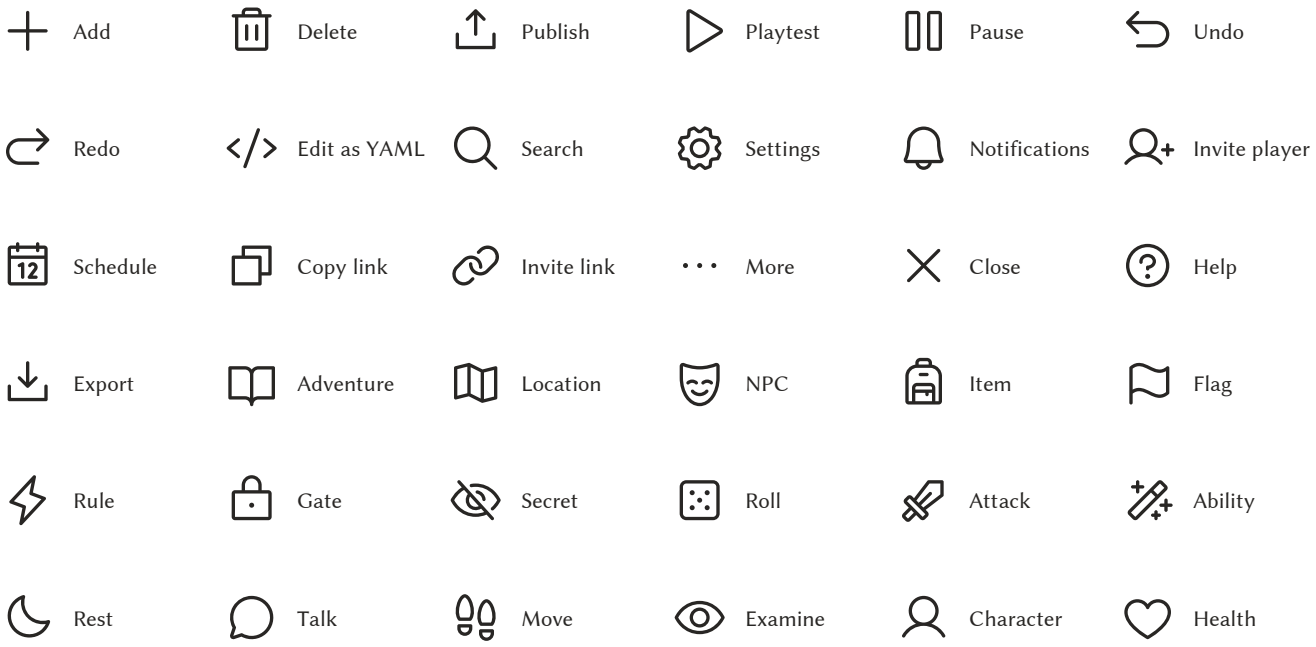

- The cleanest geometry; reads well at 16 to 20 px.
- Covers every action in the vocabulary, including swords, dice, masks, and footprints.

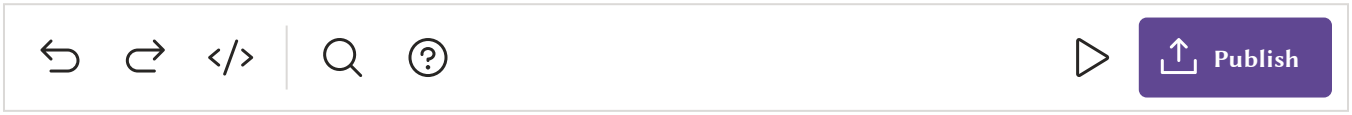

Watch for

- The most common look in current web apps.
- Single weight: active and pressed states need a background, not a filled icon.

Phosphor

MIT licence. github.com/phosphor-icons/core. about 1,500 shapes in six weights icons.
Thin, Light, Regular, Bold, Fill, and Duotone, drawn separately on a 256 grid.

Editor bar: icons, with the one primary action labelled.

Play bar: action shortcuts fill the input; the active one is tinted.

Row actions: right-aligned, most frequent nearest the text.

Suits the product

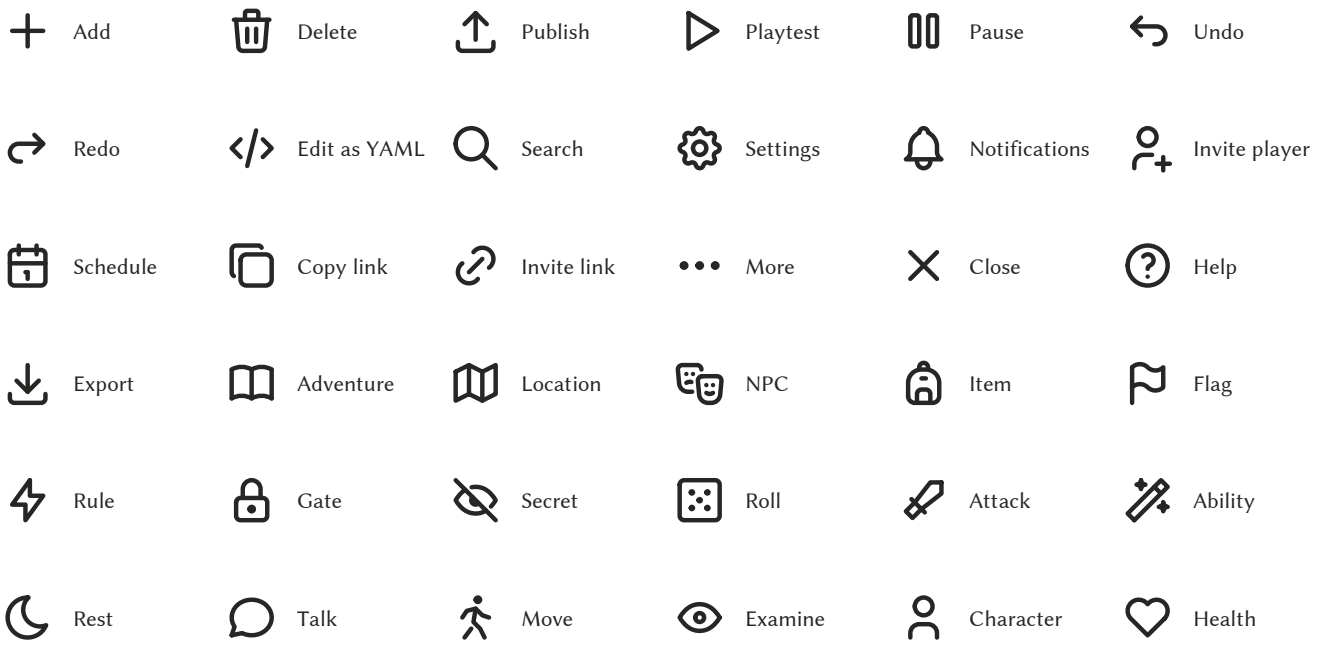

- Softer, slightly calligraphic curves sit well beside Libertinus.
- Fill weight gives toggles a true pressed state: outline off, filled on.
- Every action in the vocabulary is present.

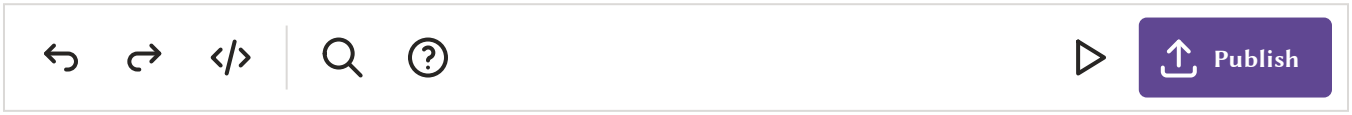

Watch for

- Six weights invite inconsistency; the system uses two.
- Some rarely used shapes are less refined than the core set.

Tabler

MIT licence. github.com/tabler/tabler-icons. about 6,000 icons. Outline, 2 px stroke on a 24 px grid, with filled alternates for some.

Editor bar: icons, with the one primary action labelled.

Play bar: action shortcuts fill the input; the active one is tinted.

Row actions: right-aligned, most frequent nearest the text.

Suits the product

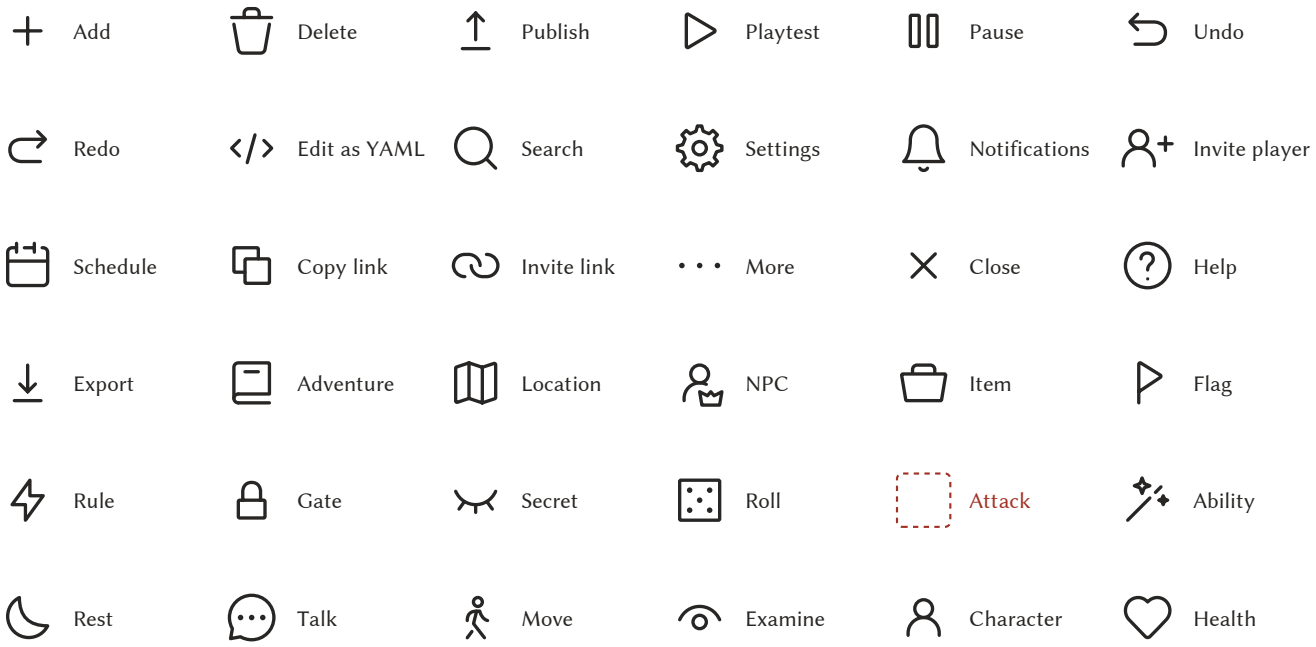

- Largest coverage; anything the editor needs later is likely there.
- Close in style to Lucide, so either could stand in for the other.

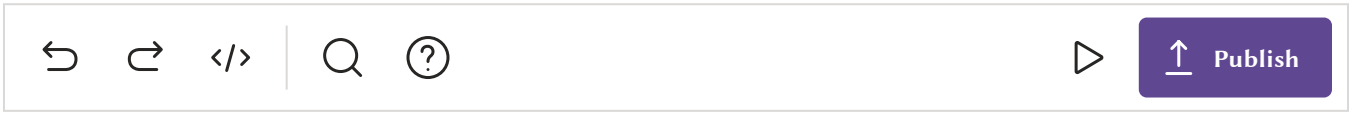

Watch for

- Coverage comes with more variance between icons.
- The 2 px stroke looks heavy beside Libertinus at small sizes unless thinned.

Iconoir

MIT licence. github.com/iconoir-icons/iconoir. about 1,600 icons. Outline, 1.5 px stroke on a 24 px grid.

Editor bar: icons, with the one primary action labelled.

Play bar: action shortcuts fill the input; the active one is tinted.

Row actions: right-aligned, most frequent nearest the text.

Suits the product

- The 1.5 px stroke matches Libertinus's colour without adjustment.
- Calm, rounded, unfashionable in a good way.

Watch for

- Gaps for this product: no sword or theatre masks; the NPC stand-in is a crowned person.
- Fewer icons for game concepts generally.

Phosphor weights

Regular for buttons, Light for 24 px and larger, Fill for the on state of a toggle and the current section. Thin, Bold, and Duotone are not used.

Light

Regular

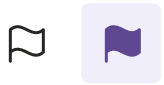

Fill

Toggles

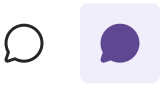

Show secrets

Show flags on graph

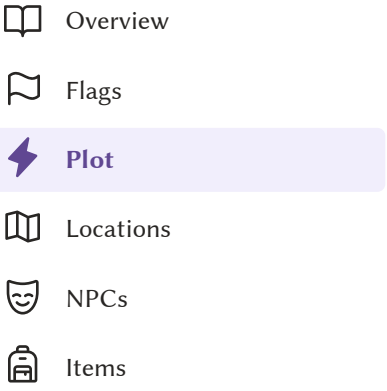

Notifications

Show narrator trace

Off: Regular outline on the page. On: Fill weight in accent on an accent-soft square, with aria-pressed set. The tooltip names the action, not the state: Show secrets, whether on or off.

Section navigation

Navigation keeps its labels: places are named, actions are drawn. The current section uses the Fill weight. On narrow screens the rail collapses to icons, and the labels move into tooltips.

Game content icons

Game-icons.net: about 4,200 filled silhouettes by Lorc, Delapouite, and contributors, under CC BY 3.0. Used for things inside adventures, never for interface actions.

Pack

Where they appear

Item and ability records	An author picks an icon for each item, ability, and creature in the adventure editor.
Inventory and the character sheet	Items show their icon at 24 px beside their name.
Graph nodes	A room may carry one icon for its dominant feature: a chest, a campfire, a skull.

Rusted sword
weapon, 2 damage

Healing draught
3 uses

Archivist's letter
quest item

Credit

Each icon's page names its artist. The attribution page lists every game icon shipped with the artist, a link to game-icons.net, and the CC BY 3.0 licence. Recolouring and resizing are allowed; the credit stays.

Icon buttons

Icon first, name on hover and focus. The rules below keep that usable with a keyboard, a screen reader, and a touch screen.

36 px target, 20 px icon

Tooltip: name, then shortcut

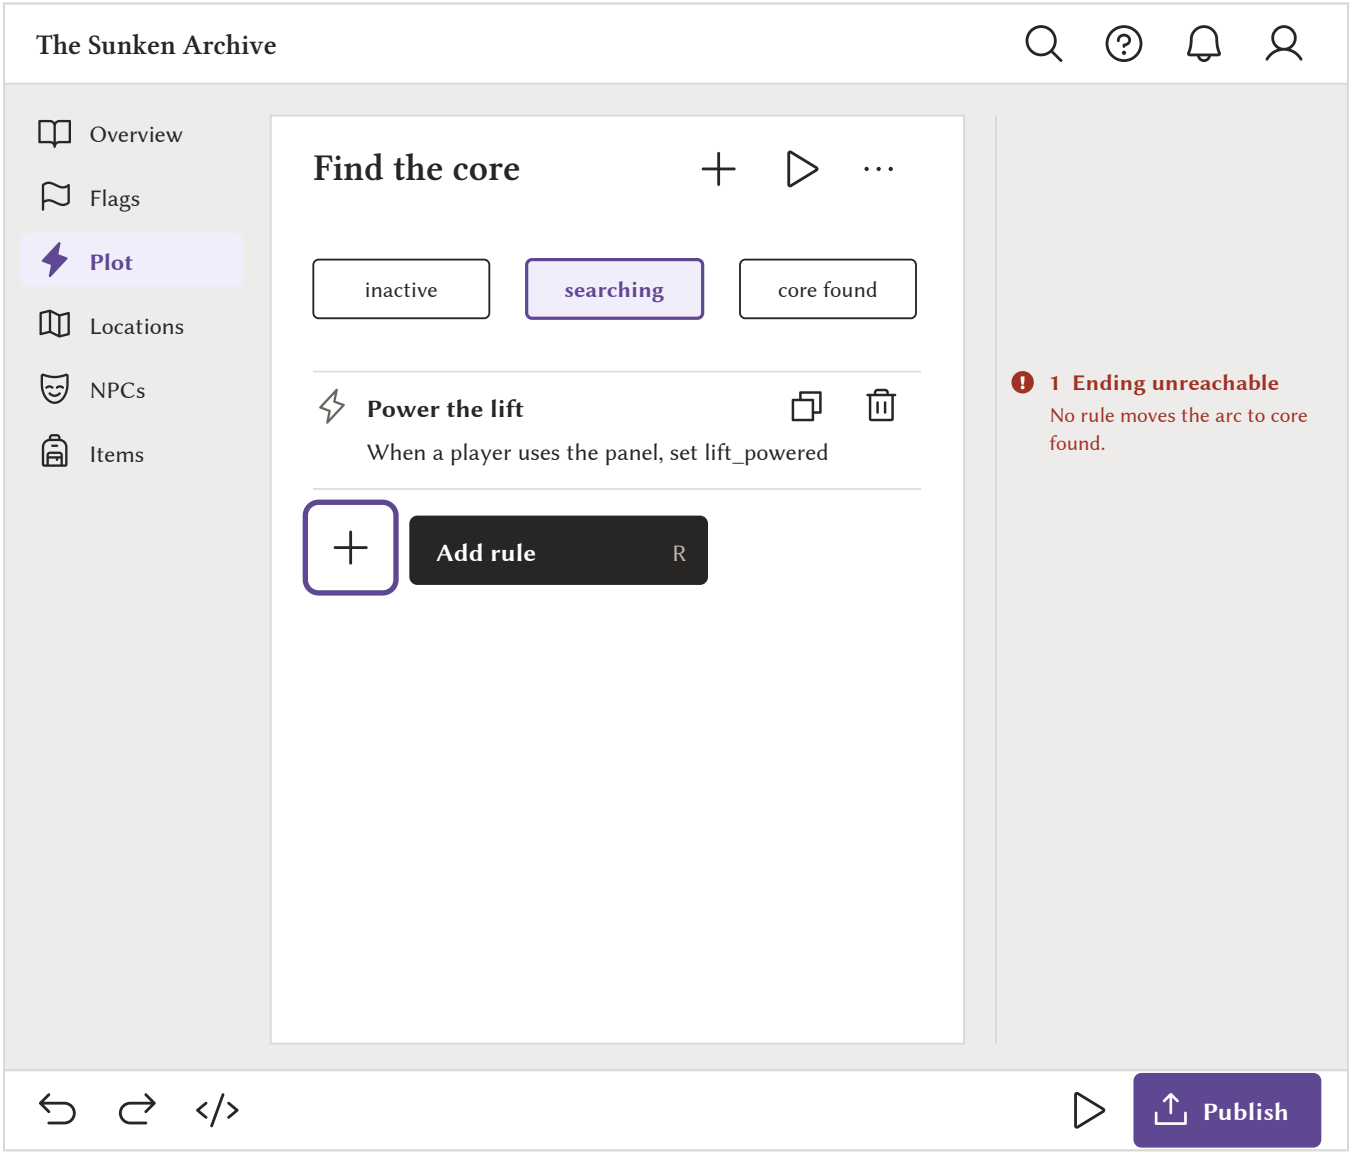

Name	Every icon button has an accessible name (aria-label) equal to its tooltip text. Voice control users say what they see on hover.
Target	36 px square by default and never under 24 px (WCAG 2.5.8). Icons are 20 px, 16 px in dense rows.
Show	Tooltip appears after 500 ms of hover, at once on keyboard focus, and stays while the pointer is over it (WCAG 1.4.13).
Hide	Escape closes it without moving focus. It closes when the pointer or focus leaves both the button and the tooltip.
Touch	Touch devices have no hover: a long press shows the tooltip, and buttons in sparse areas show their label beside the icon.
Content	The action as a verb phrase in sentence case: Add rule, Copy invite link. Then the shortcut, if any.
Disabled	Disabled buttons stay focusable (aria-disabled) so their tooltip can say why: Fix 2 problems to publish.
Toggles	aria-pressed carries the state; the tooltip keeps the action name.

Keep a visible label on

The primary action of a view	Publish, Start instance, Create character, Send invitation.
Destructive confirmations	Delete arc, in the dialog that confirms it.
Navigation	Section rail and top bar: places are named.
Choices in play	Setback options and suggested actions are text: the words are the choice.

Screen: adventure editor

Phosphor icons in the editor, with a tooltip showing for the focused button.

Recommendation

Phosphor for the interface, game-icons.net for adventure content.

Phosphor, Regular and Fill

Its curves suit Libertinus better than the stricter geometry of Lucide and Tabler, it covers the whole vocabulary, and the Fill weight gives toggles and the current section a real on state without a second set. MIT licence; @phosphor-icons/react imports icons one at a time.

Lucide as the alternative

If a plainer, more neutral look is preferred. Covers everything; one weight only.

Game-icons.net for content

Filled silhouettes for items, abilities, creatures, and room features, chosen by authors. Credit each artist on the attribution page.

Not chosen

Tabler: heavier stroke beside Libertinus, more variance. Iconoir: closest stroke weight, but missing swords and masks, which this product needs.

Tokens

icon-size	20 px; 16 px in dense rows and navigation; 24 px for content icons in lists
icon-button	36 px target; 28 px in toolbars inside a 36 px row
tooltip-delay	500 ms on hover; 0 on focus
icon-color	ink; accent when active or primary; muted for decorative leading icons
